How do some high schools produce graduates that consistently achieve at high levels? Would you believe there's a set of proven strategies that could help you deliver similar impressive results and better prepare students for the world after high school?High schools in the United States face a startling reality: many graduates are unprepared for success in postsecondary studies or for high-demand, well-paying jobs in a rapidly changing economy. Although this situation is alarming, the high schools that have embraced new ways of learning show us what is possible.Drawing from his experience with the High Schools That Work initiative, Gene Bottoms offers educators a path forward by urging them to pursue bold goals and outlining bold actions for achieving those goals. His vision is clear: replace the traditional model of secondary education with one that engages students in a rigorous curriculum that combines a

solid academic core with intellectually demanding career pathway courses.The notion that nearly all students can achieve at high levels is borne out by numerous examples of high schools-including those with traditionally underperforming student populations-that have used key strategies to help all students realize their potential. Bottoms explains the root causes of the current shortcomings in high school education and then specifies critical components of successful transformation:* Shared leadership;* Powerful assignments-especially in math, literacy, and career/technical education-planned and executed by academic and career pathway teachers working together;* Strengthened connections between middle school and high school;* A redesigned senior year; and* Comprehensive counseling and advisory programs.Provocative and persuasive in its sense of urgency, Tomorrow's High School offers proven and practical solutions to finally make high schools a rich and rewarding experience for all students, whatever their future college and career goals may be.This book is a copublication of ASCD and SREB. Co-teaching--the practice of having special education and regular education teachers work together in inclusive classrooms--is one way to ensure that all students have equal access to challenging academic content. But the practice is a challenging one, requiring thoughtful planning and execution by cooperative classroom professionals. Universal Design for Learning (UDL), a framework for designing inclusive learning environments, offers co-teachers structure and guidance in pursuing their goal to create successful learning environments for all students. In this book, veteran co-teacher and UDL expert Elizabeth Stein shows how to apply the UDL principles and guidelines to the practice of co-teaching. How does UDL inform the lesson-planning process? What does UDL look like in the classroom? What role does formative assessment play? How do you get buy-in for the UDL approach from administrators, parents, and students themselves? These and other questions are answered in this must-have book for anyone interested in co-teaching.

If a hungry little traveler shows up at your house, you might want to give him a cookie. If you give him a cookie, he's going to ask for a glass of milk. Published to glowing praise in 1990, *Science for All Americans* defined the science-literate American--describing the knowledge, skills, and attitudes all students should retain from their learning experience--and offered a series of recommendations for reforming our system of education in science, mathematics, and technology. *Benchmarks for Science Literacy* takes this one step further. Created in close consultation with a cross-section of American teachers, administrators, and scientists, *Benchmarks* elaborates on the recommendations to provide guidelines for what all students should know and be able to do in science, mathematics, and technology by the end of grades 2, 5, 8, and 12. These grade levels offer reasonable checkpoints for student progress toward science literacy, but do not suggest a rigid formula for teaching. *Benchmarks* is not a proposed curriculum, nor is it a plan for one: it is a tool educators can use as they design curricula that fit their student's needs and meet the goals first outlined in *Science for All Americans*. Far from pressing for a single educational program, Project 2061 advocates a reform strategy that will lead to more curriculum diversity than is common today. *Benchmarks* emerged from the work of six diverse school-district teams who were asked to rethink the K-12 curriculum and outline alternative ways of achieving science literacy for all students. These teams based their work on published research and the continuing advice of prominent educators, as well as their own teaching experience. Focusing on the understanding and interconnection of key concepts rather than rote memorization of terms and isolated facts, *Benchmarks* advocates building a lasting understanding of science and related fields. In a culture increasingly pervaded by science, mathematics, and technology, science literacy require habits of mind that will enable citizens to understand the world around them, make some sense of new technologies as they emerge and grow, and deal sensibly with problems that involve evidence, numbers, patterns, logical arguments, and technology--as well as the relationship of these disciplines to the arts,

humanities, and vocational sciences--making science literacy relevant to all students, regardless of their career paths. If Americans are to participate in a world shaped by modern science and mathematics, a world where technological know-how will offer the keys to economic and political stability in the twenty-first century, education in these areas must become one of the nation's highest priorities. Together with *Science for All Americans*, *Benchmarks for Science Literacy* offers a bold new agenda for the future of science education in this country, one that is certain to prepare our children for life in the twenty-first century.

Every major measure of students' historical understanding since 1917 has demonstrated that students do not retain, understand, or enjoy their school experiences with history. Bruce Lesh believes that this is due to the way we teach history -- lecture and memorization. Over the last fifteen years, Bruce has refined a method of teaching history that mirrors the process used by historians, where students are taught to ask questions of evidence and develop historical explanations. --from publisher description.

Today's teachers are responsible for a greater variety of learners with a greater diversity of needs than ever before. When you add in the ever-changing dynamics of technology and current events, the complexity of both students' and teachers' lives grows exponentially. Far too few teachers, however, successfully teach the whole class with the individual student in mind. In *Leading and Managing a Differentiated Classroom*, Carol Ann Tomlinson and Marcia B. Imbeau tackle the issue of how to address student differences thoughtfully and proactively. The first half of the book focuses on what it means for a teacher to effectively lead a differentiated classroom.

Readers will learn how to be more confident and effective leaders for and in student-focused and responsive classrooms. The second half of the book focuses on the mechanics of managing a differentiated classroom. A teacher who has the best intentions, a dynamic curriculum, and plans for differentiation cannot—and will not—move forward unless he or she is at ease with translating those ideas into classroom practice. In other words, teachers who are uncomfortable with flexible classroom management will not differentiate instruction, even if they understand it, accept the need for it, and can plan for it. Tomlinson and Imbeau argue that the inherent interdependence of leading and managing a differentiated classroom is at the very heart of 21st-century education. This essential guide to differentiation also includes a helpful teacher's toolkit of activities and teaching strategies that will help any teacher expand his or her capacity to make room for and work tirelessly on behalf of every student.
