Natural Environmental Change offers a concise introduction to this key topic in the study of the environment, geography, and earth science. Illustrated throughout, each chapter provides a broad spectrum of international case studies and further reading guides. Introductory chapters examine the theories of environmental change and provide a summary of Earth history. The records of environmental change are then explained, as revealed by data from various archives such as ocean sediment, ice core, terrestrial deposits such as glacial moraines and lake sediments, tree rings, and historical and meteorological records. Final chapters detail the changes that have occurred in high, middle and low latitudes, and the book concludes with a critical assessment of the strengths and weaknesses of current understanding. An extensive bibliography will also prove invaluable to those studying in this area.

[The Holism-Reductionism Debate Prentice Hall](#)

This book is an introduction into the reductionism-holism debate, for aspiring as well as accomplished scientists. It is intended for those working in, or preparing for, research in any scientific field—ranging from the physical sciences to the life sciences to the behavioral sciences and the social sciences. It is certainly not meant for people specialized in areas dealing with the specific issue of reductionism in a strict philosophical sense; they won't learn much new from this book. In other words, this is not a monograph with specialized, original research, but rather an initiation into the debate—more like an introductory textbook, if you will.
