Optical Fiber Communications by Gerd Keiser - Goodreads  
Optical-fiber-based telecommunication networks have become a major information-transmission-system, with high capacity links encircling the globe in both terrestrial and undersea installations. Numerous passive and active optical devices within these links perform complex transmission and networking functions in the optical domain, such as signal amplification, restoration, routing, and switching.

optical fiber communication systems started to appear in the 1970s. It is this technology that this book addresses. To exchange information between any two devices in a communication system, some type of electric or optical signal which carries this information has to be transmitted from one device to the other via a communication channel. This
