Radical changes in our understanding of health and healthcare are reshaping twenty-first-century personhood. In the last few years, there has been a great influx of public policy and biometric technologies targeted at engaging individuals in their own health, increasing personal responsibility, and encouraging people to "self-manage" their own care. One Blue Child examines the emergence of self-management as a global policy standard, focusing on how healthcare is reshaping our relationships with ourselves and our bodies, our families and our doctors, companies, and the government. Comparing responses to childhood asthma in New Zealand and the Czech Republic, Susanna Trnka traces how ideas about self-management, as well as policies inculcating self-reliance and self-responsibility more broadly, are assumed, reshaped, and ignored altogether by medical professionals, asthma sufferers and parents, environmental activists, and policymakers. By studying nations that share a commitment to the ideals of neoliberalism but approach children's health according to very different cultural, political, and economic priorities, Trnka illuminates how responsibility is reformulated with sometimes surprising results.

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DECIIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews. CMBEBIH 2017 Severe Asthma

Patient-Centered Collaborative Care World Health Organization

Asthma is a common complex and heterogeneous respiratory disease with an increasing prevalence in developed countries. Asthma is a disease consisting of different phenotypes that are driven by different mechanistic pathways (endotypes). The recognition of these phenotypes and endotypes is central to asthma management entailing prognostic and therapeutic implications. It is acknowledged that despite optimal treatment, many patients are poorly controlled, highlighting the need for phenotype-guided treatments. In this context, the emergence of novel therapies (monoclonal antibody therapy, bronchial thermoplasty) is paving the way for personalized asthma therapy. A better understanding of disease pathogenesis may enable the identification of biomarkers, mediators, novel therapeutic targets, and treatable traits. Further molecular phenotyping or endotyping of asthma will be necessary to tailor new therapeutic strategies. The present Special Issue on Asthma aims to provide the current knowledge on phenotypes and endotypes in appreciating and managing the heterogeneous condition that is asthma.
