This text is a lucid presentation of the principles of working of all types of sensors and transducers which form the prime components of the instrumentation systems. The characteristics of the sensors and transducers and the operating principles of transducer technologies have been discussed in considerable detail. Besides covering conventional sensors such as electromechanical, thermal, magnetic, radiation, and electroanalytical, the recent advances in sensor technologies including smart and intelligent sensors used in automated systems are also comprehensively described. The application aspects of sensors

used in several fields such as automobiles, manufacturing, medical, and environment are fully illustrated. With a straightforward approach the text is aimed at building a sound understanding of the fundamentals, and inculcating analytical skills needed for design and operation. Numerous schematic representations, examples, and review questions help transcend underlying basics to automation and instrumentation. The book with incisive explanations and all the pedagogic attributes is designed to serve the needs of the engineering students of instrumentation, chemical, mechanical, and electrical disciplines. It will also be a useful text for the students of applied sciences.

This book studies the exclusion and discrimination that is meted out to Scheduled Caste (SC) students in the Indian Higher Education system, and the psychosocial consequences of such practices. It foregrounds the conceptual debates around caste, exclusion, and reservations in Indian academia, discussing

the social dominance and the roots of prejudices in the university spaces. The volume reflects upon the fragile social world in which students from the margins struggle for survival in the academic space. It reveals that these students navigate the various facets of academia – like classrooms, pedagogy, scholarships, hostels, peer groups, and teachers – only to find the academic space a dystopian universe. The book also sheds light on suicide cases committed by the marginalized groups as a testimony of protest. Based on in-depth ethnographic research, this book will be of interest to teachers, students and researchers of education, sociology, political science, psychology, and exclusion studies. It will also be useful for policymakers, social

activists, NGOs, research centers, and those working in higher education, reservations, public policy, caste, and exclusion studies.

On the cover of this book is a Pacific yew tree, found in the ancient forests of the Pacific Northwest. The bark of the Pacific yew tree produces Taxol, found to be a highly effective drug against ovarian and breast cancer. Taxol blocks mitosis during eukaryotic cell division. The supply of Taxol from the Pacific yew tree is vanishingly

small, however. A single 100-year-old tree provides only about one dose of the drug (roughly 300 mg). For this reason, as well as the spectacular molecular architecture of Taxol, synthetic organic chemists fiercely undertook efforts to synthesize it. Five total syntheses of Taxol have thus far been reported. Now, a combination of isolation of a related metabolite from European yew needles, and synthesis of Taxol from that intermediate, supply the clinical demand. This case clearly demonstrates the importance of synthesis and the use of organic chemistry. It's just one of the many examples used in the text that will spark the interest of students and get them involved in the study of organic chemistry!
