Motojournalism isn't like most jobs. On any given day you might show up for work and...Log a thousand miles in 24 hours on a Harley Softail just to see if you can, and learn how some riders do that for 11 days in a row--and call it fun.Cling to the bars of an FZR1000 streaking down the Mistral Straight at the Paul Ricard Circuit in the south of France, watching the speedo needle creep past the 160 mark.Gaze in awe at the breathtaking emptiness of Alaska from the saddle of a high-mile dual-sport, or get hopelessly lost in the sun-parched landscape of eastern Washington state on a Gold Wing as black as sin.Ride one of Kenny Roberts' TZ750 roadracers, then sit on the dusty floor of an empty racetrack building and talk to the King about it for a couple of hours.Trail sparks from your footpegs on the notorious Sunday Morning Ride, or cross several state lines in a day to eat a monster chiliburger with a dozen of your best and craziest friends.Missed Shifts is a collection of these and other stories told in the unique voice of veteran motojournalist Jerry Smith, who served on the staff of Rider, Cycle Guide, and Motorcyclist before setting out on a freelance career that's 30 years old and counting. In this book he has gathered some of his favorite pieces, crafted in his witty style, and presented from his slightly off-center point of view.No matter what you ride--or whether you ride it solo or with friends--put up your sidestand, hit the starter, and come along for the ride.

Build your own aluminum casting foundry. Cast bicycle shift levers or whatever else you have in mind. Learn to melt and cast scrap aluminum for profit or just for fun. While much of this book discusses the Bike Shift Lever project (read more at OneStreet.org under Programs, One Street Components), readers will learn how to cast just about anything using scrap aluminum and make a profit doing so. In addition to casting, the book also offers guidance on product marketing and sales. Starting with foundry and casting basics, readers learn how to build an inexpensive charcoal-fired furnace using a flowerpot or fired-clay bricks. An entire chapter is dedicated to sorting and melting scrap aluminum so that readers will always have an ample supply of quality metal for casting. The book wraps up with product marketing and sales, using Bike Shift Levers as the example, but showing how any cast aluminum product can be profitably produced in a backyard foundry. In the back of the book, readers will find: a detailed table of aluminum alloys to help them sort their scrap, the design drawings for the Bike Shift Lever. For readers interested in making Bike Shift Levers, they will learn how to become one of our license partners and receive a permanent casting mold that will hold up to many, many castings. License partners are critical to this project as we work to provide affordable, durable, and repairable shift levers to people worldwide who rely on their bicycles everyday. We also offer our license partners ongoing support for foundry solutions, marketing in their area, and bulk purchases of foundry and shift lever supplies. Backyard Aluminum Casting is for anyone who wants to try casting scrap aluminum into Bike Shift Levers or just about anything else that can be made out of aluminum."

Evolution or revolution ... this was the dilemma Honda faced in creating the new fifth generation Gold Wing. Consumers were happy with the near-perfect GL1500 Gold Wing, but sales were declining and owners ageing.In 1996 Honda's designers and engineers decided the only way forward for the Gold Wing was a revolutionary approach. Given a brief by management to incorporate more 'Fun Factor' and make a large luxury touring motorcycle perform like a sports orientated machine, their target market was the younger rider.The GL1800 Gold Wing launched as a 2001 model and was updated in 2006 with the world's first and only motorcycle airbag system. Surviving a production return to Japan it had a second face-lift for 2012 and from that, two other variants emerged, a 'Bagger' and 'Power Cruiser', the F6B and Valkyrie/F6C.The GL1800 was destined to become the longest running Gold Wing series, but over its 17 years of production Honda faced stiff competition.Peter Rakestrow examines the GL1800's history from 1996 to the end of production in 2017, looking at model improvements through the years of this legendary marque, creating a point of reference for owners, buyers and restorers alike.

Ideal for advanced undergraduate and first-year graduate courses in analog filter design and signal processing, Design of Analog Filters integrates theory and practice in order to provide a modern and practical "how-to" approach to design. A complete revision of Mac E. Van Valkenburg's classicwork, Analog Filter Design (1982), this text builds on the presentation and style of its predecessor, updating it to meet the needs of today's engineering students and practicing engineers. Reflecting recent developments in the field and emphasizing intuitive understanding, it provides students withan up-to-date introduction and design guidelines and also helps them to develop a "feel" for analog circuit behavior.Design of Analog Filters, Second Edition, moves beyond the elementary treatment of active filters built with opamps. The book discusses fundamental concepts; opamps; first- and second-order filters; second-order filters with arbitrary transmission zeros; filters with maximally flat magnitude, withequal ripple (Chebyshev) magnitude, and with inverse Chebyshev and Cauer response functions; frequency transformation; cascade designs; delay filters and delay equalization; sensitivity; LC ladder filters; ladder simulations by element replacement and by operational simulation; in addition,high-frequency filters based on transconductance-C concepts and on designs using spiral inductors are covered; as are switched-capacitor filters, and noise issues.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets
