GlassFish Server Application
Deployment Guide - Contents
Oracle GlassFish Server 3.1
Application Deployment Guide
July 2011. This Application
Deployment Guide describes
deployment of applications and
application components to the
Oracle GlassFish Server, and
includes information about
deployment descriptors.

Glassfish Application Deployment Guide

Use the --altd option or
--runtimealtd options of the
deploy (and redeploy)
subcommand to deploy an
application or module using a

top-level alternate deployment
descriptor. The --altd option
specifies a top-level alternate
Java EE standard deployment
descriptor. The
--runtimealtd option
specifies a top-level alternate
GlassFish Server runtime
deployment descriptor.

This Application
Deployment Guide
describes deployment of
applications and
application components
to GlassFish Server
Open Source Edition, and
includes information
about deployment
descriptors. This preface
contains information
about and conventions
for the entire GlassFish
Server Open Source
Edition (GlassFish
Server) documentation
set.

Imixs Open Source Workflow –

GlassFish/Payara Deployment Guide

These deployment instructions will consider deploying Stingray Traffic Manager and GlassFish application server in the following architecture: GlassFish application server already supports load-balancing by utilizing a web-server and a plug-in.

web.xml File. The glassfish-ejb-jar.xml File. The sun-cmp-mappings.xml File. The glassfish-application-client.xml file. The sun-acc.xml File. The glassfish-resources.xml File. WebLogic Server Deployment Descriptor Support in GlassFish Server

GlassFish Server Open Source Edition - Java EE GlassFish/Payara Deployment Guide. This section will explain the configuration steps needed to successfully deploy the Imixs-Sample Application on Payara Application Server. Payara is based on the GlassFish implementation. The deployment is similar for other custom projects. About Application Deployment - Oracle GlassFish Server 3.1 ... Deploying Applications

and Modules.

Application deployment is a dynamic process, which means that deployed applications and modules become available without requiring you to restart the server instance.

Dynamic deployment can be useful in production environments to bring new applications and modules online easily.
