compilation of papers presented at the IFIP Working Group 8. 2 conference entitled "Information Technology in the Service Economy: Challenges and Possibilities for the 21 Century." The conference took place at Ryerson University, Toronto, Canada, on August 10-13, 2008. Participation in the conference spanned the continents from Asia to Europe with paper submissions global in focus as well. Conference submissions included completed research papers and research in progress reports. Papers submitted to the conference went through a double blind review process in which the program co chairs, an associate editor, and reviewers provided assessments and recommendations. The editorial efforts of the associate editors and reviewers in this process were outstanding. To foster high quality research publications in this field of study, authors of accepted papers were then invited to revise and resubmit their work. Through this rigorous review and revision process, 12 completed research papers and 11 research in progress reports were accepted for

presentation and publication. Paper workshop sessions were also established to provide authors of emergent work an opportunity to receive feedback from the IFIP 8. 2 community. Abstracts of these new projects are included in this volume. Four panels were presented at the conference to provide discussion forums for the varied aspects of IT, service, and globalization. Panel abstracts are also included here.

I3E 2001 is the first in a series of conferences on e-commerce, e-business, and-government organised by the three IFIP committees TC6, TC8, and TC11. It provides a forum, where users, engineers, and scientists from academia, industry, and government can present their latest findings in e-commerce, e-business, and-government applications and the underlying technology to

support those applications. The conference comprises a main track and mini tracks dedicated to special topics. The papers presented in the main track were rigorously refereed and selected by the International Programme Committee of the conference. Thematically they were grouped in the following sessions: - Sessions on security and trust, comprising nine papers referring to both trust and security in general as well as presenting specific concepts for enhancing trust in the digital society. - Session on inter-organisational transactions, covering papers related to auditing of inter-organizational trade procedures, cross-organizational workflow and transactions in Business to Business platforms. - Session on virtual enterprises, encompassing papers describing innovative approaches for creating virtual enterprises as well as describing examples of

---

virtual enterprises in specific industries. - Session on online communities containing three papers, which provide case studies of specific online communities and various concepts on how companies can build and harness the potential of online communities. - Sessions on strategies and business models with papers describing specific business models as well as general overviews of specific approaches for E- Strategy formulation.

Enterprise resource planning (ERP) is a class of integrated software that uses software technologies to implement real-time management of business processes in an organization. ERPs normally cut across organizations, making them

large and complex. Software researchers have for many years established that complexity affects software quality negatively and must therefore be controlled with novel metrics and models of evaluation that can determine when the software is at acceptable levels of quality and when not. Metrics and Models for Evaluating the Quality and Effectiveness of ERP Software is a critical scholarly publication that examines ERP development, performance, and challenges in business settings to help improve decision making in organizations that have embraced ERPs, improve the efficiency and effectiveness of their activities, and improve their return on investments (ROI). Highlighting a wide range of topics such as data mining, higher education, and

security, this book is essential for professionals, software developers, researchers, academicians, and security professionals. *Handbook of Research on Enhancing Innovation in Higher Education Institutions* Springer  
Multinational companies need to manage their relationships with multinational customers with a globally integrated approach. This book provides a systematic framework for developing and implementing such global customer management programs. It draws on in-depth research at over 20 major U.S. and European multinational companies, such as ABB, Bechtel, BP, Bosch, British Airways, Carrefour, Daimler-Chrysler, Hewlett-Packard, HSBC, IBM, Schlumberger, Shell, Siemens, Tesco, Unilever, Vodafone, Wal-Mart, and Xerox. Readers

will learn how to think about managing global customers in the context of their overall global strategy. • develop effective global customer management programs • overcome barriers to implementation and success • build better relationships with important customers • get the entire company to engage with managing global customers This book takes a strategic, total business, and not just sales approach to managing global customers. It also takes a customer as well as a supplier perspective. The book provides guidance on both strategy and implementation. Yip and Bink's *Managing Global Customers* takes a systematic and logic driven approach, yet provides many creative insights and practical advice. *Managing Global Customers* highlights

the rewards of taking a step beyond global account management to create a Global Customer Management approach, integrating globally all aspects of the relationship between supplier and customer. The book gives a framework that guides international companies in using their relationships with global customers to their full potential. George Yip, author of the widely-praised *Total Global Strategy*, and Audrey Bink tackle in-depth one of the most important aspects of global strategy: How to manage global customers. *CIO Magazine* Infinite Ideas Enterprise Resource Planning for Global Economies: Managerial Issues and Challenges IGI Global **Enterprise Information Systems: Concepts, Methodologies, Tools and Applications** Packt Pub Limited This three-volume collection, titled *Enterprise Information*

*Systems: Concepts, Methodologies, Tools and Applications*, provides a complete assessment of the latest developments in enterprise information systems research, including development, design, and emerging methodologies. Experts in the field cover all aspects of enterprise resource planning (ERP), e-commerce, and organizational, social and technological implications of enterprise information systems. *Quality Assurance for Dynamics Ax-Based Erp Solutions* World Scientific SAP ERP modules are notoriously hard to configure and use effectively without a lot of practice and experience. But as *SAP ERP Financial Accounting and Controlling: Configuration and Use Management* shows, it doesn't have to be so difficult. The book takes a systematic approach that leads SAP Financial Accounting and Controlling (FICO) users step by step through configuring and using all the program's facets. This approach makes

---

configuration complexities manageable. The book's author—SAP expert, trainer, and accountant Andrew Okungbowa—ensures that both you and your end users are up and running quickly and confidently with FICO. He also provides sound and tested procedures that ensure your implementation works without error. SAP ERP Financial Accounting and Controlling: Configuration and Use Management is in fact the most comprehensive and easy-to-follow SAP FICO configuration book in the market. It incorporates a hands-on approach, with hundreds of screen shots and practical examples, that allows a person without prior configuration training to make SAP FICO ready for use in the enterprise. You'll find that you don't need to be a rocket scientist to grasp the concepts explained and apply them to your work—even when the finances are complicated, such as with the

ins and outs of taxes, currency conversions, or special general ledger entries such as down payments or bills of exchange. Providing an in-depth coverage of both configuration and end user procedures, the book covers most aspects of the SAP FICO certification syllabus—SAP's view of the module's key tasks and procedures—including: Configuring and using the general ledger and accounts payable and receivable screens Configuring and completing closing procedures, asset accounting, and financial reporting Configuring global settings and enterprise variables Accounting for both profit and cost centers Creating a house bank Integrating FICO with other SAP modules Taking a jargon-free tone and providing an abundance of examples, Andrew Okungbowa provides a clear understanding of configuration techniques and the breadth of functionalities

encompassed by SAP FICO. And as an accountant, Okungbowa understands the needs of end users as well as of those answering to the CIO. John Wiley & Sons This book deals with quality awareness as well as quality assurance. It discusses the quality expectations from the ERP solution, talks about the best practices for meeting the quality expectations, and then suggests the strategies to test the customized Dynamics AX ERP application. Microsoft Business Solution partners will benefit greatly from this book. This book targets functional experts and Dynamics AX developers. A basic knowledge of the X++ language and the basics of Axapta architecture are needed to follow the book, but no prior knowledge of testing is required. The following will find this book useful: MBS Partners who are dealing in Dynamics AX: To educate their employees for achieving their

---

quality goals. Project Managers / Quality Managers: To update themselves about the standards related to Design, Development, Testing, etc., which are a part of Microsoft IBI Specifications for Dynamics AX 4.0. Dynamics AX Developers: To update themselves about coding standards that apply to Dynamics AX and to know the principles behind various recommended best practices. Functional Consultants: To update themselves about Solution Design / GUI Specifications. Chief Technology Officers / Technical Solution Designers: To gain awareness about best practices for trustworthy computing and how these can be implemented at organization / project level. Dynamics AX Customers: To know about applicable standards for Dynamics AX customization projects and hence be able to effectively monitor their projects or set expectations from vendors about quality

goals.

### Emerging Issues and Technologies for ERP Systems FON

Ever since 1989, the Faculty of Organizational Sciences, University of Belgrade, has been the host of SymOrg, an event that promotes scientific disciplines of organizing and managing a business. Traditionally, the Symposium has been an

opportunity for its participants to share and exchange both academic and practical knowledge and experience in a pleasant and creative atmosphere. This time, however, due the challenging situation regarding the COVID-19 pandemic, we have decided that all the essential activities planned for the International Symposium SymOrg 2020 should be carried out online between the 7th and the 9th of September 2020. We are very pleased that the topic of SymOrg 2020, "Business and Artificial Intelligence", attracted researchers from different institutions, both in Serbia and abroad. Why is artificial intelligence a disruptive technology? Simply because "it significantly alters the way consumers, industries, or businesses

---

operate." According to the European Commission document titled Artificial Intelligence for Europe 2018, AI is a key disruptive technology that has just begun to reshape the world. The Government of the Republic of Serbia has also recognized the importance of AI for the further development of its economy and society and has prepared an AI Development Strategy for the period between 2020 and 2025. The first step has already been made: the Science Fund of the Republic of Serbia, after a public call, has selected and financed twelve AI projects. This year, more than 200 scholars and practitioners authored and co-authored the 94 scientific and research papers that had been accepted for publication in the Proceedings. All the

contributions to the Proceedings are classified into the following 11 sections: Information Systems and Technologies in the Era of Digital Transformation Smart Business Models and Processes Entrepreneurship, Innovation and Sustainable Development Smart Environment for Marketing and Communications Digital Human Resource Management Smart E-Business Quality 4.0 and International Standards Application of Artificial Intelligence in Project Management Digital and Lean Operations Management Transformation of Financial Services Methods and Applications of Data Science in Business and Society We are very grateful to our distinguished keynote speakers: Prof. Moshe Vardi, Rice University, USA, Prof. Blaž Zupan, University of

Ljubljana, Slovenia, Prof. Vladan Devedži?, University of Belgrade, Serbia, Milica ?uri?-Jovi?i?, PhD, Director, Science Fund of the Republic of Serbia, and Harri Ketamo, PhD, Founder & Chairman of HeadAI ltd., Finland. Also, special thanks to Prof. Dragan Vukmirovi?, University of Belgrade, Serbia and Prof. Zoran Ševarac, University of Belgrade, Serbia for organizing workshops in fields of Data Science and Machine Learning and to Prof. Rade Mati?, Belgrade Business and Arts Academy of Applied Studies and Milan Dobrota, PhD, CEO at Agremo, Serbia, for their valuable contribution in presenting Serbian experiences in the field of AI. The Faculty of Organizational Sciences would to express its gratitude to the Ministry of Education, Science and Technological

Development and all the individuals who have supported and contributed to the organization of the Symposium. We are particularly grateful to the contributors and reviewers who made this issue possible. But above all, we are especially thankful to the authors and presenters for making the SymOrg 2020 a success!

Innovation in higher education is a process of institutional adaptation to changes in the environment that enables higher education institutions to improve their existing practice and to be innovative at different levels and in different forms. Moreover, innovativeness is also

related to internal characteristics of higher education institutions. Innovation in higher education can be observed as a result of the changing contexts in which higher education institutions function. Adjacently, a comprehensive approach to considering innovativeness is needed in order to enable the examination of different elements of innovativeness in higher education, that is, to identify the key factors that (de)stimulate innovations and affect their interactions with other relevant stakeholders at the national level and beyond. The Handbook of Research on Enhancing Innovation in Higher Education Institutions is a critical scholarly book that examines innovativeness in higher education and its complications and diversity.

Starting from the view that higher education is currently confronted by global forces that require new research ideas, the publication suggests that comprehensive understanding of innovativeness is imperative for higher education's institutions in the 21st century. Analyzing the recognized trends within the publication and concluding which aspects should be taken to improve innovativeness in higher education, this reference book outlines quality and innovation in teaching, innovative university-business cooperation, institutional framework and governance of higher education institutions, knowledge management, and leadership and organizational culture. It is ideal for curriculum designers, administrators,

researchers, policymakers, academicians, professionals, and students.

Free/Open Source Enterprise Resource Planning systems (FOS-ERP) are gaining popularity and acceptance due to two main factors: their lack of licensing fees and customizability. Given this, organizations are able to easily adopt and manipulate these systems to meet their individual needs. *Free and Open Source Enterprise Resource Planning: Systems and Strategies* unites research on FOS-ERP, comparing differences with proprietary Enterprise Resource Planning products, and demonstrating key research factors. It includes cases demonstrating how small enterprises have benefited from FOS-ERP in Spain and in Belgium, along with difficulties encountered and solutions developed. This essential reference addresses key issues such as security and legal risks, as well as challenges, opportunities, and

barriers to adoption.

This first comprehensive study of the interaction between technology and taxation

approaches the subject along four main avenues: insight and analysis gained from empirical legal studies conducted in the area of taxation; methods for improving the control and management of the tax function in business; tax auditing through statistical sampling; and changes in the fiscal environment as a result of technological capabilities. Among the topics that arise are the following: what choices of sampling methodology exist; determination of both one-sided and two-sided confidence intervals; under what circumstances statistical sampling is acceptable as proof of underpayment and as a basis for penalties; the use of sampling agreements as a tool to improve taxpayers' understanding of the process; complexities encountered by the introduction of technology in tax administration in developing countries; technological capability to

detect economic activity in the informal sector; technological innovation as substitute for inadequate human capacity; improvements available to better monitor the movement and values of goods entering a country; safeguards to prevent unauthorized use of personal information; prioritizing resources to ensure that the key strategic objectives of the agency are being addressed; government defensive action and the threat to privacy; and capabilities and limitations of enterprise resource planning systems and tax engines. Although the author pays especially detailed attention to the technologies developed and used by the United States Internal Revenue Service, other notable systems developed by the European Union, Brazil, Mexico, and China are also examined. Various sampling methods and practices are illustrated with numerical examples. As tax systems

acquire ever higher levels of integration, and because accuracy is crucial to the measurement of tax compliance, the perspectives opened and expertly analyzed by the author will prove of great importance. Practitioners, tax policymakers and administrators, tax standard setters, and tribunals dealing with disputes over tax administration and procedure, as well as academics and researchers, will instantly recognize the book's great importance and practical value. The global village is a reality and enterprise resource planning (ERP) implementations face new issues and challenges. Enterprise Resource Planning for Global Economies: Managerial Issues and Challenges provides authoritative research on the theoretical frameworks and pragmatic discussions on global implementations of information systems, particularly ERP systems. This book offers professionals, managers, and researchers, who want to improve their understanding of the issues and challenges that arise when information systems cross national boundaries, with an authoritative, essential research resource.
