Everything you've always wanted to know about self-driving cars, Netflix recommendations, IBM's Watson, and video game-playing computer programs. The future is here: Self-driving cars are on the streets, an algorithm gives you movie and TV recommendations, IBM's Watson triumphed on Jeopardy over puny human brains, computer programs can be trained to play Atari games. But how do all these things work? In this book, Sean Gerrish offers an engaging and accessible overview of the breakthroughs in artificial intelligence and machine learning that have made today's machines so smart. Gerrish outlines some of the key ideas that enable intelligent machines to perceive and interact with the world. He describes the software architecture that allows self-driving cars to stay on the road and to navigate crowded urban environments; the million-dollar Netflix competition for a better recommendation engine (which had an unexpected ending); and how programmers trained computers to perform certain behaviors by offering them treats, as if they were training a dog. He explains how artificial neural networks enable computers to perceive the world—and to play Atari video games better than humans. He explains Watson's famous victory on Jeopardy, and he looks at how computers play games, describing AlphaGo and Deep Blue, which beat reigning world champions at the strategy games of Go and chess. Computers have not yet mastered everything, however; Gerrish outlines the difficulties in creating intelligent agents that can successfully play video games like StarCraft that have evaded solution—at least for now. Gerrish weaves the stories behind these breakthroughs into the narrative, introducing readers to many of the researchers involved, and keeping technical details to a minimum. Science and technology buffs will find this book an essential guide to a future in which machines can outsmart people. White Shroud MIT Press

He was recruited to do a job in Germany where he was to simply drive the get away car while providing a look out. He thought this was going to be an easy job and a way to break into the German crime scene. But things go terribly wrong and he ended up being the only survivor of the botched heist. Simon is quickly sentenced to a prison called Rhinehoth. This is where Germany sent the worst of the worst, surely not a place for a petty thief such as himself. Rhinehoth is a great German castle that was converted in the late 1930's to a Stalag for war criminals of World War II. Their captors are the army of Werewolves who have survived the centuries off the very flesh and blood of Germany's worst forgotten criminals. Simon, imprisoned becomes plagued with visions from his subconscious ancient past with confusion of his modern day consciousness. He discovers through his visions that he is the ancient warrior, Guthrie who has come to free the Vampire Prince and all the captives while saving the world from a dark plan of biblical proportions that has been orchestrated over the centuries!
