Please note: This ebook edition does not include the photo insert from the print edition. The widely anticipated memoir of legendary ace American fighter pilot, Robin Olds Robin Olds was a larger-than-life hero with a towering personality. A graduate of West Point and an inductee in the National College Football Hall of Fame for his All-American performance for Army, Olds was one of the toughest college football players at the time. In WWII, Olds quickly became a top fighter pilot and squadron commander by the age of 22—and an ace with 12 aerial victories. But it was in Vietnam where the man became a legend. He arrived in 1966 to find a dejected group of pilots and motivated them by placing himself on the flight schedule under officers junior to himself, then challenging them to train him properly because he would soon be leading them. Proving he wasn't a WWII retread, he led the wing with aggressiveness, scoring another four confirmed kills, becoming a rare triple ace. Olds (who retired a brigadier general and died in 2007) was a unique individual whose personal story is one of the most eagerly anticipated military books of the year.

In an action-packed war memoir and squadron history, ace fighter pilot Tom Blackburn describes exactly how he shaped a crew of over-eager hotshots into one of the highest scoring fighter squadrons of World War II and U.S. Navy history. In only 76 days of combat, Blackburn's Jolly Rogers downed a record 154 enemy warplanes, and Blackburn himself emerged as one of VF-17's leading aces with eleven aerial combat victories to his credit. A complete history of the squadron from its commissioning in January 1943 to its disbanding in April 1944—including a harrowing account of the squadron's intense, winning campaign against the Japanese over the northern Solomon Islands and Fortress Rabaul—this book offers a fascinating look at Blackburn's approach to organizing, training, and leading his pilots—thirteen of whom, the author included, became air aces.

Now in a revised and expanded second edition, this indispensable clinical resource and text helps readers understand the latest developmental knowledge and apply it in their work with children and families. The book begins with a framework elucidating the transactions between individual development and the child's wider environment, and emphasizing the crucial role of attachment. Key developmental processes and tasks from infancy through middle childhood are then discussed in paired chapters that respectively address how children of different ages typically feel, think, and behave, and how to intervene effectively with those who are having difficulties. Ideally structured for classroom use, the second edition has been updated throughout to reflect current research, practice advances, and policy issues. Included are an important new chapter on the developing brain and expanded coverage of applications for child care and school settings.

The King Air Book Aviation Supplies & Academics
September 1962: On a moonless night over the raging Atlantic Ocean, a thousand miles from land, the engines of Flying Tiger flight 923 to Germany burst into flames, one by one. Pilot John Murray didn't have long before the plane crashed headlong into the 20-foot waves at 120 mph. As the four flight attendants donned life vests, collected sharp objects, and explained how to brace for the ferocious impact, 68 passengers clung to their seats: elementary schoolchildren from Hawaii, a teenage newlywed from Germany, a disabled Normandy vet from Cape Cod, an immigrant from Mexico, and 30 recent graduates of the 82nd Airborne's Jump School. They all expected to die. Murray radioed out "Mayday" as he attempted to fly down through gale-force winds into the rough water, hoping the plane didn't break apart when it hit the sea. Only a handful of ships could pick up the distress call so far from land. The closest was a Swiss freighter 13 hours away. Dozens of other ships and planes from 9 countries abruptly changed course or scrambled from Canada, Iceland, Ireland, Scotland, and Cornwall, all racing to the rescue—but they would take hours, or days, to arrive. From the cockpit, the blackness of the Atlantic grew ever closer. Could Murray do what no pilot had ever done—"land" a commercial airliner at night in a violent sea without everyone dying? And if he did, would rescuers find any survivors before they drowned or died from hypothermia in the icy water? The fate of Flying Tiger 923 riveted the world. Bulletins interrupted radio and TV programs. Headlines shouted off newspapers from London to LA. Frantic family members overwhelmed telephone switchboards. President Kennedy took a break from the brewing crises in Cuba and Mississippi to ask for hourly updates. Tiger in the Sea is a gripping tale of triumph, tragedy, unparalleled airmanship, and incredibly brave people from all walks of life. The author has pieced together the story—long hidden because of murky Cold War politics—through exhaustive research and reconstructed a true and inspiring tribute to the virtues of outside-the-box-thinking, teamwork, and hope.

OGT Reading Simon and Schuster
From 1945 to 1973, more than 100,000 members of the U.S. military were advisors in Vietnam. Of these, 66,399 were combat advisors. Eleven were awarded the Medal of Honor, 378 were killed

and 1393 were wounded. Combat advisors lived and fought with South Vietnamese combat units, advising on tactics and weapons and liaising with local U.S. military support. Bob Worthington's first tour (1966-1967) began with training at the Army Special Warfare School in unconventional warfare, Vietnamese culture and customs, advisor responsibilities and Vietnamese language. Once in-country, he acted as senior advisor to infantry defense forces and then an infantry mobile rapid reaction force. Worthington worked alongside ARVN forces, staging operations against Vietcong and North Vietnamese Army units, and coordinated actions with the U.S. Marines. He describes a night helicopter assault by a 320-man ARVN battalion against a 1,200-man NVA regiment. On another night, the Vietcong ceased fire while Worthington arranged a Marine helicopter to medevac a wounded baby.

The history of flight control cannot be considered separately to the history of aviation. Since the early days, the conception of automatic flight control systems has advanced from mechanical control systems to greatly developed automatic fly-by-wire flight control systems which can be found in military jets and civil airliners these days. Even today, several research attempts are made for the further advancement of these flight control systems in numerous aspects. Current advancements in this area target a variety of different aspects. This book presents a collection of knowledge on important research areas, like inertial navigation, handling of unmanned airplanes and helicopters, trajectory control of an unmanned space re-entry automobile, aeroservoelastic control, modifying flight control, and error tolerant flight control. It discusses theoretical outlook and current conceptual advancements in flight control systems along with describing theories of modified and fault-tolerant flight control systems. Each technique has been elaborated using illustrations and appropriate examples.

Under Fire with ARVN Infantry Aviation Supplies & Academics

You've mastered the FAA handbooks and wrapped up one of the toughest orals of your flying career. You can now fly and talk at the same time, all from the right seat. You can create lesson plans, enter mysterious endorsements in student logbooks, and actually explain the finer points of a lazy eight. That's everything you'll ever need to know in order to flight instruct...or is it? This book is designed to help with all those "other" flight instructing questions, like why and how to become a CFI in the first place, and how to get your first instructing job. Where do flight students come from? And once you've got them, how do you keep them flying? How can you optimize your students' pass rate on checkrides? And how do you get flight customers to come back to you for their advanced ratings? Written by Greg Brown (author of The Turbine Pilot's Flight Manual and Job Hunting for Pilots), this Second Edition of The Savvy Flight Instructor provides nearly 20 years of additional wisdom, experience, and know-how, and includes new "Finer Points" contributed by industry experts. While this edition retains the key marketing, pilot training, and customer support concepts that made the original edition required CFI reading, those areas have been refined and expanded to incorporate the latest industry philosophies and techniques. Readers will learn how best to sell today's prospects on flying and how to utilize online marketing and social media. Greg Brown lays out tips for offering flight-instructing services with the sophistication of other competitive activities that beckon from just a click away on potential customers' computers and mobile devices. Aspiring flight instructors will learn why and how to qualify, and how to get hired once you earn the certificate. There's extensive coverage of techniques for systematizing customer success and satisfaction policies, strategies for pricing and structuring flight training to fit today's market, integration of affordable simulation technologies into your training programs, and tips for coping with the "CFI shortage." Along with tips on how to attract and retain flight students, the author examines professionalism in flight instructing. In short, The Savvy Flight Instructor shows you how to use your instructing activities to increase student satisfaction, promote general aviation, and advance your personal flying career all at the same time. Contributing writers in the new "Finer Points" sections are Heather Baldwin (a commercial pilot and marketing writer), and CFIs Jason Blair (a designated pilot examiner), Ben Eichelberger (a flight training standardization expert), Dorothy Schick (flight school owner and marketing innovator), and Ian Twombly (noted flight-training writer and editor).
