SAP is a market leader in enterprise business application software. SAP solutions provide a rich set of composable application modules, and configurable functional capabilities that are expected from a comprehensive enterprise business

application software suite. In most cases, companies that adopt SAP software remain heterogeneous enterprises running both SAP and non-SAP systems to support their business processes. Regardless of the specific scenario, in heterogeneous enterprises most SAP implementations must be integrated with a variety of non-SAP enterprise systems: Portals Messaging infrastructure Business process management (BPM) tools Enterprise Content Management (ECM) methods and tools Business analytics (BA) and business intelligence (BI) technologies Security Systems of record Systems of engagement The tooling included with SAP software addresses many needs for creating SAP-centric environments. However, the classic approach to implementing SAP functionality generally leaves the business with a rigid solution that is difficult and expensive to change and enhance. When SAP software is used in a large, heterogeneous enterprise environment, SAP clients face the dilemma of selecting the correct set of tools and platforms to implement SAP functionality, and to integrate the SAP solutions with non-SAP systems. This IBM® Redbooks® publication explains the value of integrating IBM software with SAP solutions. It describes how to enhance and extend pre-built capabilities in SAP software with best-in-class IBM enterprise software, enabling clients to maximize

return on investment (ROI) in their SAP investment and achieve a balanced enterprise architecture approach. This book describes IBM Reference Architecture for SAP, a prescriptive blueprint for using IBM software in SAP solutions. The reference architecture is focused on defining the use of IBM software with SAP, and is not intended to address the internal aspects of SAP components. The chapters of this book provide a specific reference architecture for many of the architectural domains that are each important for a large enterprise to establish common strategy, efficiency, and balance. The majority of the most important architectural domain topics, such as integration, process optimization, master data management, mobile access, Enterprise Content Management, business intelligence, DevOps, security, systems monitoring, and so on, are covered in the book. However, there are several other architectural domains which are not included in the book. This is not to imply that these other architectural domains are not important or are less important, or that IBM does not offer a solution to address them. It is only reflective of time constraints, available resources, and the complexity of assembling a book on an extremely broad topic. Although more content could have been added, the authors feel confident that the scope of

architectural material that has been included should provide organizations with a fantastic head start in defining their own enterprise reference architecture for many of the important architectural domains, and it is hoped that this book provides great value to those reading it. This IBM Redbooks publication is targeted to the following audiences: Client decision makers and solution architects leading enterprise transformation projects and wanting to gain further insight so that they can benefit from the integration of IBM software in large-scale SAP projects. IT architects and consultants integrating IBM technology with SAP solutions.

Who This Book Is For  
This book is for developers, CTOs, and architects working for a startup or another kind of lean startup environment, such as start-up within a cooperation. It is ideal for any iOS and Android developer who wants to build successful mobile apps by adopting the lean startup methodology.  
What You Will Learn\* Define what your hypotheses are by creating an MVP \* Validate your idea against the business model Canvas\* Develop skills and devise strategies to build versatile and flexible apps that meet changing business requirements\* Apply the lean startup methodology to real Android and iOS development\* Build your MVP app, gather feedback through statistics or by getting user comments, learn from it, and adapt your app accordingly\* Investigate the possibilities when you need to pivot your startup idea\* Create a successful app and get tips to improve it  
In Detail  
The lean startup methodology has proven to be a stable factor in startup land. It's a movement that keeps growing and will be the standard way of doing things sooner or later. That sounds great from a theoretical point view, but what does that mean for you as an Android or iOS developer? How do you develop apps that are successful in the Android and iOS stores? Hands-on information on this subject is currently lacking. This is where this book comes in! We bring the technical know-how of developers and processes together to build a successful app for a business. This book is where the development team meets the business team, also known as the "problem identifying team and the solution team. This book will guide you to build apps that are successful for your business by bringing together these two separate worlds. We explain the elements of the lean startup methodology and elaborates on research, implementation, and configuration tasks from a technical point of view. We also focus on the soft side of the journey. Starting with an overview of what lean startup methodology is all about and why it matters, we will continue to create a Minimum Viable Product (MVP), which could be as easy as a landing page. We will explore the quick wins to measure feedback other than just asking your beta users by using tools such as Google Analytics and HockeyApp. We will also have a look at the on-boarding process and how we could facilitate it. When your app is ready for a public launch, you'll launch it and see what happens. If it gains more and more traction over time, the mission has succeeded. And if it did not? Learn from your mistakes, make a pivot, or start something new.
