Who benefits from smart technology? Whose interests are served when we trade our personal data for convenience and connectivity? Smart technology is everywhere: smart umbrellas that light up when rain is in the forecast; smart cars that relieve drivers of the drudgery of driving; smart toothbrushes that send your dental hygiene details to the cloud. Nothing is safe from smartification. In Too Smart,

Jathan Sadowski looks at the proliferation of smart stuff in our lives and asks whether the tradeoff—exchanging our personal data for convenience and connectivity—is worth it. Who benefits from smart technology? Sadowski explains how data, once the purview of researchers and policy wonks, has become a form of capital. Smart technology, he argues, is driven by the dual imperatives of digital capitalism: extracting data from, and expanding control over, everything and everybody. He looks at three domains colonized by smart technologies' collection and control systems: the smart self, the smart home, and the smart city. The smart self involves more than self-tracking of steps walked and calories burned; it raises questions about what others do with our data and how they direct our behavior—whether or not we want them to. The smart home collects data about our habits that offer business a window into our domestic spaces.

And the smart city, where these systems have space to grow, offers military-grade surveillance capabilities to local authorities. Technology gets smart from our data. We may enjoy the conveniences we get in return (the refrigerator says we're out of milk!), but, Sadowski argues, smart technology advances the interests of corporate technocratic power—and will continue to do so unless we demand oversight and ownership of our data.

Sustainable development is a globally recognized mandate and it includes green or environment-friendly manufacturing practices. Such practices orchestrate with the self-healing and self-replenishing capability of natural ecosystems. Green manufacturing encompasses synthesis,

processing, fabrication, and process optimization, but also testing, performance evaluation and reliability. The book shall serve as a comprehensive and authoritative resource on sustainable manufacturing of ceramics, metals and their composites. It is designed to capture the diversity and unity of methods and approaches to materials processing, manufacturing, testing and evaluation across disciplines and length scales. Each chapter incorporates in-depth technical information without compromising the delicate link between factual data and fundamental concepts or between theory and practice. Green and sustainable materials processing and manufacturing is designed as a key enabler of sustainable development. - A one-stop compendium of new research and technology of green manufacturing of metals, ceramics and their composites - In-depth cutting-edge treatment of synthesis, processing, fabrication, process optimization, testing, performance evaluation and reliability which are of critical importance to green manufacturing - Stimulates fresh thinking and exchange of ideas and information on approaches to

green materials processing across disciplines Telecommunication Switching And Networks World Bank Publications Treating your customers well is no longer enough. The new rule is: employees too, have to be treated as well, if not better, than the customers. Happy employees make happy customers, and happy customers tend to be loyal. Do you spend money in advertising to create awareness about your product? You don't need to do that any longer. The new rule is: invest in making your product so good that it does its own marketing. New Age companies, Amazon and Flipkart, Uber and Ola, and Netflix, among others, are dismantling the old rules of business and installing new rules in their place. This book unfolds the mysteries of these new ways of doing business which most companies try to keep under wraps. Compellingly written with several anecdotes, this is a gripping book full of incredible insights.

This book is for people involved in working with plastic material and plastic fabricating

processes. The information and data in this book are provided as a comparative guide to help in understanding the performance of plastics and in making the decisions that must be made when developing a logical approach to fabricating plastic products to meet performance requirements at the lowest costs. It is formatted to allow for easy reader access and this care has been translated into the individual chapter constructions and index. This book makes very clear the behaviour of the 35,000 different plastics with the different behaviours of the hundreds of processes. Products reviewed range from toys to medical devices, to cars, to boats, to underwater devices, containers, springs, pipes, aircraft and spacecraft. The reader's product to be designed and/or fabricated can be directly or indirectly related to plastic materials, fabricating processes and/or product design reviews in this book.*Essential for people involved in working with plastic material and plastic fabricating processes *Will help readers understand the performance of plastics *Helps readers to make decisions which meet performance requirements and to keep costs low

The book discusses one of the major challenges in agriculture which is delivery of cultivate produce to the end consumers

with best possible price and quality. Currently all over the world, it is found that around 50% of the farm produce never reaches the end consumer due to wastage and suboptimal prices. The authors present solutions to reduce the transport cost, predictability of prices on the past data analytics and the current market conditions, and number of middle hops and agents between the farmer and the end consumer using IoT-based solutions. Again, the demand by consumption of agricultural products could be predicted quantitatively; however, the variation of harvest and production by the change of farm's cultivated area, weather change, disease and insect damage, etc., could be difficult to be predicted, so that the supply and demand of agricultural products has not been controlled properly. To overcome, this edited book designed the IoT-based monitoring system to analyze crop environment and the method to improve the efficiency of decision making by analyzing harvest statistics. The book is also useful for academicians working in the areas of climate changes.

Innovation may be the hottest discipline around today, in business circles and beyond. And for good reason.

Innovation transforms companies and markets. It is the key to solving vexing social problems. And it makes or breaks professional careers. For all the enthusiasm the topic inspires, however, the practice of innovation remains stubbornly impenetrable. No longer. In this book the author draws on stories from his research and field work with companies like Procter & Gamble to demystify innovation. He presents a simple definition of innovation, breaks down the essential differences between types of innovation, and illuminates innovation's vital role in organizational success and personal growth. This unique hybrid of professional memoir and business guidebook also provides

a powerful 28-day program for mastering innovation's key steps: (1) Finding insight, (2) Generating ideas, (3) Building businesses, and (4) Strengthening innovation prowess in workforces and organizations. Using several illustrative case studies and vignettes from a range of companies around the globe, this playbook teaches people how to turn themselves or their companies into true innovation powerhouses.

Alles Wissenswerte rund um Smart Grids, umfassend und interdisziplinär beschrieben von internationalen Experten aus Forschung und Praxis. Dieses Buch trägt dem Wunsch nach einem hochkarätigen Referenzwerk zur Smart-Grid-Technologie Rechnung ? eine Technologie, die bei der Entwicklung einer umweltfreundlichen Energieinfrastruktur eine zentrale Rolle spielt. Das dreibändige Smart Grid Handbook mit insgesamt 83 Artikeln ist in sechs Abschnitte unterteilt: Vision and Drivers (Vision und Einflussgrößen), Transmission (Übertragung) Distribution (Verteilung), Smart Meters and Customers (intelligente Zähler und Kunden), Information and Communications Technology (Informations- und Kommunikationstechnik), Socio-Economic Issues (sozialökonomische

Aspekte). Wichtige Merkmale: - Geschrieben von einem Team, das sich mit Smart Grids auskennt und seine Erfahrung aus den folgenden Bereichen einbringt: Forschung & Entwicklung, Technikeinsatz, Standards, Branchenpraxis und sozialökonomische Aspekte. - Der Abschnitt Vision and Drivers beschäftigt sich mit Vision, Definitionen, der Weiterentwicklung und globalen Entwicklung von Smart Grids sowie mit neuen Technologien und Standards. - Der Abschnitt Transmission erläutert Branchenpraxis, Erfahrung im operativen Bereich, Standards, Cybersicherheit und Grid Codes. - Im Abschnitt Distribution werden Verteilungssysteme und Systemkonfigurationen in verschiedenen Ländern sowie verschiedene Lasten, die über das Netz bedient werden, vorgestellt. - Der Abschnitt Smart Meters and Customers untersucht, wie Kunden über Smart Meter mit dem Stromnetz interagieren können.

China is now the world's fourth largest economy and growing very fast. India's economic salience is also on the rise. Together these two countries will

profoundly influence the pace and nature of food in ancient and modern societies around the world. Therefore, the ability to access natural products, understand their usefulness, and derive applications has been a major driving force in the field of natural product research. The first edition of *Natural Products Isolation* provided readers for the first time with some practical guidance in the process of extraction and isolation of natural products and was the result of Richard Cannell's unique vision and tireless efforts. Unfortunately, Richard Cannell died in 1999 soon after completing the first edition. We are indebted to him and hope this new edition pays adequate tribute to his excellent work. The first edition laid down the "ground rules" and established the techniques available at the time. Since its publication in 1998, there have been significant developments in some areas in natural product isolation. To capture these developments, publication of a second edition is long overdue, and we believe it brings the work up to date while still covering many basic techniques known to save time and effort, and capable of results equivalent to those from more recent and expensive techniques.

Globalization has expanded the options for building brand strategies through social media, the internet, and in conventional approaches. Amidst increasing market competition, companies need to analyze their competitive choices to determine their brand equity in the marketplace. As such, it is necessary for companies to develop customer-focused brands to gain competitive advantage. This book enhances knowledge on developing competitive brands in emerging markets, particularly the BRICS countries. It provides the necessary guidance with proven strategies for building successful brands, the decisions and options faced by brand managers, and the tools to manage brands effectively. It develops new dimensions on brand management strategies by analyzing best practices based on proven strategies. Readers will not only gain insight into international brand competition, but also into the organizational support necessary to build and manage a powerful brand. It is a necessary read for all MBA students and scholars in marketing, especially those who seek to gain new insight in the rapidly changing global marketplace.

Global society in the 21st century is

facing challenges of improving the quality of air, water, soil and the environment and maintaining the ecological balance. Environmental pollution, thus, has become a major global concern. The modern growth of industrialization, urbanization, modern agricultural development and energy generation has resulted in the indiscriminate exploitation of natural resources for fulfilling human desires and needs, which has contributed in disturbing the ecological balance on which the quality of our environment depends. Human beings, in the truest sense, are the product of their environment. The man-environment relationship indicates that pollution and deterioration of the environment have a social origin. The modern technological advancements in chemical processes/operations have generated new products, resulting in new pollutants in such abundant levels that they are above the self-cleaning capacity of the environment. One of the major issues in recent times is the threat to human lives due to the

progressive deterioration of the environment from various sources. The impact of the pollutants on the environment will be significant when the accumulated pollutants load will exceed the carrying capacity of the receiving environment. Sustainable development envisages the use of natural resources, such as forests, land, water and fisheries, in a sustainable manner without causing changes in our natural world. The Rio de Janeiro-Earth Summit, held in Brazil in 1992, focused on sustainable development to encourage respect and concern for the use of natural resources in a sustainable manner for the protection of the environment. This book will be beneficial as a source of educational material to post-graduate research scholars, teachers and industrial personnel for maintaining the balance in the use of natural sources for sustainable development.

Any strategy to cope with an influenza pandemic must be based on the knowledge and tools that are available at the time an epidemic may occur. In the near term, when we lack an adequate supply of vaccine and antiviral medication, strategies that rely on social distancing and physical barriers will be relatively more prominent as means to prevent spread of disease. The use of respirators and facemasks is one key part of a larger strategy to establish barriers and increase distance between infected and uninfected individuals. Respirators and facemasks may have a role in both clinical care and community settings. Reusability of Facemasks During an Influenza Pandemic: Facing the Flu answers a specific question about the role of respirators and facemasks to reduce the spread of flu: Can respirators and facemasks that are designed to be disposable be reused safely and

effectively? The committee-assisted by outstanding staff-worked intensively to review the pertinent literature; consult with manufacturers, researchers, and medical specialists; and apply their expert judgment. This report offers findings and recommendations based on the evidence, pointing to actions that are appropriate now and to lines of research that can better inform future decisions.

Apicius is a collection of Roman cookery recipes, thought to have been compiled in the 1st century AD and written in a language in many ways closer to Vulgar than to Classical Latin; later recipes using Vulgar Latin (such as ficatum, bullire) were added to earlier recipes using Classical Latin (such as iecur, fervere). Based on textual analysis, the food scholar Bruno Laurioux believes that the surviving version only dates from the fifth century (that is, the end of the Roman Empire): "The history of De Re Coquinaria indeed belongs then to the Middle Ages". The name "Apicius" is taken from the habits of an early bearer of the name, Marcus Gavius Apicius, a Roman gourmet who lived sometime in the 1st century AD during the reign of Tiberius. He is sometimes erroneously asserted to be the author of the book pseudepigraphically attributed to him. Apicius is a text to be used in the kitchen. In the earliest printed editions,

it was usually called De re coquinaria (On the Subject of Cooking), and attributed to an otherwise unknown Caelius Apicius, an invention based on the fact that one of the two manuscripts is headed with the words "API CAE" or rather because a few recipes are attributed to Apicius in the text: Patinam Apicianam sic facies (IV, 14) Ofellas Apicianas (VII, 2). It is also known as De re culinaria.
