Why do some languages wither and die, while others prosper and spread? Around the turn of the millennium a number of archaeologists such as Colin Renfrew and Peter Bellwood made the controversial claim that many of the world's major language families owe their dispersal to the adoption of agriculture by their early speakers. In this volume, their proposal is reassessed by linguists, investigating to what extent the economic dependence on plant cultivation really impacted language spread in various parts of the world. Special attention is paid to "tricky" language families such as Eskimo-Aleut, Quechua, Aymara, Bantu, Indo-European, Transeurasian, Turkic, Japano-Koreanic, Hmong-Mien and Trans-New Guinea, that cannot unequivocally be regarded as instances of Farming/Language Dispersal, even if subsistence played a role in their expansion.

human senses can be found within the pages of Foundations of Sensation and Perception. This third edition maintains the standard for clarity and accessibility combined with rigor which was set in previous editions, making it suitable for a wide range of students. As in the previous editions, the early chapters allow students to grasp fundamental principles in relation to the relatively simple sensory systems (smell, taste, touch and balance) before moving on to more complex material in hearing and vision. The text has been extensively updated, and this new edition includes: a new chapter devoted to attention and perception over 200 new references over 30 new figures and improved, more colorful, visual presentation a new companion website with a range of resources for students and lecturers The book contains a range of pedagogical features, including tutorial sections at the end of each chapter. This distinctive feature introduces areas of the subject which are rarely included in student texts, but are crucial for establishing a firm foundation of knowledge. Some tutorials are devoted to more advanced and technical topics (optics, light measurement, Bayesian inference), but treated in an accessible manner, while others cover topics a little outside of the mainstream (music perception, consciousness, visual art). Foundations of Sensation and Perception will enable the reader to achieve a firm grasp of current knowledge concerning the processes that underlie our perception of the world and will be an invaluable resource for those studying psychology, neuroscience, and related disciplines.

fast becoming the de facto laboratory programming language, yet existing books typically discuss applications that have nothing to do with science and engineering. This primer fills the gap in the field, showing professionals seeking to improve the productivity of their laboratories how to use Visual Basic(r) to automate laboratory processes. Automating Science and Engineering Laboratories with Visual Basic(r) helps laboratory professionals decide when and if to use Visual Basic(r) and how to combine it with the many computing technologies used in modern laboratories such as RS-232 port communications, TCP/IP networking, and event-driven control, to name a few. With an emphasis on getting readers programming immediately, the book provides clear guidelines to the appropriate programming

techniques as well as custom-developed software tools. Readers will learn how to build applications to control laboratory instruments, collect and process experimental data, create interactive graphical applications, and more. Boasting many working examples with the complete source code and backward compatibility to previous versions of Visual Basic(r), Automating Science and Engineering Laboratories with Visual Basic(r) is an indispensable teaching tool for nonprogrammers and a useful reference for more experienced practitioners. Differential Forms and Applications Harper Collins The latest entry in this acclaimed series of new translations of the Musketeer novels, Blood Royal continues the adventures of the valiant d' Artagnan and his three loyal friends. The latest translation in Lawrence Ellsworth's acclaimed new

series of Alexandre Dumas's greatest adventures is Blood Royal, the second half of what Dumas originally published as Twenty Years After. In this volume all the plots and schemes set up in the previous novel come to dramatic fruition in the kind of exciting thrill-ride Dumas is famous for—while at the same time introducing the characters and themes that form the foundation of the rest of the series, leading to its great climax in The Man in the Iron Mask. In Blood Royal, the Four Musketeers all venture to England on parallel missions to save King Charles I, pursued by the murderous and vengeful Mordaunt, the son of Milady de Winter, the great villain of The Three Musketeers. Despite all his experience, d' Artagnan is repeatedly foiled by the much-younger Mordaunt, who erupts out of the past to embody the strengths of audacity and

cunning that were once d'Artagnan's hallmarks. Mordaut has corrupted those youthful strengths, and the older d'Artagnan is no match for him until he is able to pull his former team together again. To do this d'Artagnan will have to become a true leader of men, leading not just by example but also by foresight, persuasion, and compromise. Only then can the team of Athos, Porthos, and Aramis be re-formed in all its might to defeat the specter of their past. Blood Royal is unmatched in Dumas's oeuvre in its depictions of his most famous and beloved characters, and an unforgettable saga of swordplay, suspense, revenge, and ultimate triumph.
