Teamwork is a complex but essential component of palliative care. The needs of people diagnosed with life threatening disease will vary greatly over time, and it is rarely possible for just one professional to be able to provide adequate care. In order to ensure an holistic approach, the whole multi-disciplinary team must be involved. Inevitable questions arise from such an approach, and this book seeks to address these. How does a team come into being? What different formats are there? How might the patient contribute to the effectiveness of their care and the way in which the team operates? What are the difficulties and frustrations encountered in developing and maintaining such teams? What models of working and styles of leadership have developed? How are power and authority handled within the team setting? The importance of team building, training, support, attention to group process, and stress management to protect the mental health of the team are explored. The ethical issues inherent in palliative care such as consent, autonomy, confidentiality, decision making within teams, and the legal implications of such are also discussed. The book concludes with one important question - do we know if teams are the most effective way of providing care? This book addresses key issues surrounding the role of the team in palliative care, and is an essential guide to reappraising the importance of collaborative teamwork, and enhancing understanding of existing team structures.

"Problem-Solving and Selected Topics in Euclidean Geometry: in the Spirit of the Mathematical Olympiads" contains theorems which are of particular value for the solution of geometrical problems. Emphasis is given in the discussion of a variety of methods, which play a significant role for the solution of problems in Euclidean Geometry. Before the complete solution of every problem, a key idea is presented so that the reader will be able to provide the solution. Applications of the basic geometrical methods which include analysis, synthesis, construction and proof are given. Selected problems which have been given in mathematical olympiads or proposed in short lists in IMO's are discussed. In addition, a number of problems proposed by leading mathematicians in the subject are included here. The book also contains

new problems with their solutions. The scope of the publication of the present book is to teach mathematical thinking through Geometry and to provide inspiration for both students and teachers to formulate "positive" conjectures and provide solutions.
