Google Earth is a geographic browser or geobrowser which means that it can access images from satellites, the air, ocean, and other geographical data by using the internet. It represents the Earth as a three-dimensional globe. In simpler terms, it is a computer program that uses satellite imagery to provide a representation of the earth. It was first released on June 11, 2001. Subsequent versions were released thereafter, including the most recent version called Google Earth Update. Google Earth displays satellite imagery of the Earth 's surface so that users can view cities, oceans, and pretty much almost all of the earth in 3D, or three dimensions. Users can also add their own data and make them available. There are many other things that users can do with Google Earth, and they

will be mentioned further on in the book. Mapping Skills with Google Earth: Map Your Country Classroom Complete Press Explore the world from your computer! started with each tool, presents practical unit plans illustrating the use of Web 2.0 in the K-12 content-area curricula, and identifies and describes what tools are most useful to educators for networking, productivity and insight into the technologies. Part 1 of each chapter answers many questions you will have about Web 2.0 and social networking tools: What is the tool? Why use it with students? How are K-12 classrooms using the tool? Can you provide me with specific examples for my science, history, or language arts curriculum? Part 2 describes specific tools and the steps to get started. Part 3 contains a detailed sample unit plan, teacher exercises and a summary following. Screen shots of websites are used to make the advice straightforward and easy to understand. You'll find an entire chapter on special instruction for ESL students with objectives, tools, and K-12 classroom examples. To help you implement Web 2.0 tools beyond the curriculum, there's even a chapter devoted to technology tools specifically designed for teachers and librarians to use for personal productivity, communication, and collaboration. The conclusion offers ideas for integrating Web 2.0 in art, music, and health. Exciting examples of the book's contents include: Collaborating and Communicating with Blogs Creating Multidisciplinary Wikis

[Mapping Skills with Google Earth: Population Maps](#) Classroom Complete Press A substantial portion of the world's rice is produced and consumed in the Asia and Pacific region. As much of the region's population depends on rice farming for consumption and livelihood, the demand for good quality statistics remains essential for effective policy formulation. Recent advances in remote sensing serve as a viable alternative to traditional methods of compiling agricultural statistics by responding to the emerging data requirements and overall needs of modern agriculture, especially for staple commodities such as rice. This publication outlines the procedures, methods and tools developed for generating statistics on paddy rice area and production using remote sensing and GIS techniques. It is intended to encourage and assist national statistical systems in piloting and adopting satellite-based techniques as an alternative to existing data collection methods, while enabling other interested readers to comprehend whether the adoption of these methodologies can improve the quality and timeliness of agricultural statistics. The handbook also serves as a complement to a massive online open course developed by ADB for crop area estimation.
