"A postmodern literary masterpiece." – The Times Literary Supplement
Two hundred years after civilization ended in an event known as the Blast, Benedikt isn't one to complain. He's got a job—transcribing old books and presenting them as the words of the great new leader, Fyodor Kuzmich, Glorybe—and though he doesn't enjoy the privileged status of a Murza, at least he's not a serf or a half-human four-legged Degenerator harnessed to a troika. He has a house, too, with enough mice to cook up a tasty meal, and he's happily free of mutations: no extra fingers, no gills, no cockscombs sprouting from his eyelids. And he's managed—at least so far—to steer clear of the ever-vigilant Saniturations, who track down anyone who manifests the slightest sign of Freethinking, and the legendary screeching Slynx that waits in the wilderness beyond. Tatyana Tolstaya's *The Slynx* reimagines dystopian fantasy as a wild, horripilating amusement park ride. Poised between Nabokov's *Pale Fire* and Burgess's *A Clockwork Orange*, *The Slynx* is a brilliantly inventive and shimmeringly ambiguous work of art: an account of a degraded world that is full of echoes of the sublime literature of Russia's past; a grinning portrait of human inhumanity; a tribute to art in both its sovereignty and its helplessness; a vision of the past as the future in which the future is now.

Il volume 30 di « Archeologia e Calcolatori » si apre con un inserto speciale, dedicato al trentennale della rivista. Alle introduzioni di F. Djindjian e di P. Moscati, che delineano un quadro dell'informatica archeologica nel suo divenire, seguono gli articoli dei membri del Comitato di Redazione, a testimoniare l'attività di ricerca e di sperimentazione che ha caratterizzato il cammino editoriale della rivista, e il contributo di una giovane laureata dell'Università Bocconi, che ha lavorato a stretto contatto con il team di « Archeologia e Calcolatori ». Nella parte centrale sono pubblicati gli articoli proposti annualmente dagli autori. Ne emerge un quadro che rappresenta gli aspetti applicativi più qualificanti dell'informatica archeologica (le banche dati, i GIS, le analisi statistiche, i sistemi multimediali), ma che guarda oggi con sempre maggiore interesse agli strumenti di visualizzazione scientifica e di comunicazione delle conoscenze. Il volume si chiude con gli Atti del XII Workshop ArcheoFOSS (Free, Libre and Open Source Software e Open Format nei processi di ricerca archeologica), un'iniziativa lodevole, nata nel 2006, cui si è più volte dato spazio nelle pagine della rivista.

The Manual of Tests and Criteria contains criteria, test methods and procedures to be used for classification of dangerous goods according to the provisions of Parts 2 and 3 of the United Nations Recommendations on the Transport of Dangerous Goods, Model Regulations, as well as of chemicals presenting physical hazards according to the Globally Harmonized System of Classification and Labelling of Chemicals (GHS). As a consequence, it supplements also national or international regulations which are derived from the United Nations Recommendations on the Transport of Dangerous Goods or the GHS. At its ninth session (7 December 2018), the Committee adopted a set of amendments to the sixth revised edition of the Manual as amended by Amendment 1. This seventh revised edition takes account of these amendments. In addition, noting that the work to facilitate the use of the Manual in the context of the GHS had been completed, the Committee considered that the reference to the "Recommendations on the Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and decided that from now on, the Manual should be entitled "Manual of Tests and Criteria".

Lithium-ion Batteries Bitter Lemon Press

"This is the first machine-generated scientific book in chemistry published by Springer Nature. Serving as an innovative prototype defining the current status of the technology, it also provides an overview about the latest trends of lithium-ion batteries research. This book explores future ways of informing researchers and professionals. State-of-the-art computer algorithms were applied to: select relevant sources from Springer Nature publications, arrange these in a topical order, and provide succinct summaries of these articles. The result is a cross-corpora auto-summarization of current texts, organized by means of a similarity-based clustering routine in coherent chapters and sections. This book summarizes more than 150 research articles published from 2016 to 2018 and provides an informative and concise overview of recent research into anode and cathode materials as well as further aspects such as separators, polymer electrolytes, thermal behavior and modelling. With this prototype, Springer Nature has begun an innovative journey to explore the field of machine-generated content and to find answers to the manifold questions on this fascinating topic. Therefore it was intentionally decided not to manually polish or copy-edit any of the texts so as to highlight the current status and remaining boundaries of machine-generated content. Our goal is to initiate a broad discussion, together with the research community and domain experts, about the future opportunities, challenges and limitations of this technology."--Publisher's website.
