Alain Briot states that, "The personality of the

photographer must be present in the image for an artistic photograph to have value." And in this book he sets out to teach the things that are essential in achieving this goal. Following his successful first book, Mastering Landscape Photography, Briot goes beyond the conventional rules of composition and takes on a fresh, new approach to teaching the art of

---

photography. Based upon his personal experiences as an artist, teacher, and photographer, he opens new doors to the reader-doors leading to new ways of seeing and composing images. Briot approaches fine art photography as being a combination of art and technique. In this new book he addresses both of these by presenting artistic and technical information. On the artistic side, Briot introduces artistic concepts that have been rarely, if ever, associated with photography. On the technical side, he presents numerous tools that can help you learn how to create better photographs and provides technical solutions to common photographic problems. The author practices photography as a fine art. What matters most to him is how photography can be used to express feelings and emotions. For Briot, a good photograph must be both artistically inspired and technically excellent. To have just one of these two elements is not enough for a fine art photograph to be successful. Topics include: - How to compose with color, with black and white, and with light - Why you need to consider your audience while composing a photograph - Recreate the emotions you felt when you captured your photographs - How the elements of color-hue, contrast, and saturation-work in your images - How to control the elements that have a visual effect in your photographs - How to draw upon your personal way of seeing and then share your vision - How to diagnose image maladies and apply the proper remedies - How to define a color palette for a specific photograph - How to use compositional elements to develop a personal style

The breathtakingly rapid  
pace of change in  
computing makes it easy  
to overlook the pioneers  
who began it all. Written  
by Martin Davis,  
respected logician and  
researcher in the theory  
of computation, *The  
Universal Computer: The  
Road from Leibniz to  
Turing* explores the  
fascinating lives, ideas,  
and discoveries of seven

remarkable  
mathematicians. It tells  
the stories of the unsung  
heroes of the computer  
age – the logicians. The  
story begins with Leibniz  
in the 17th century and  
then focuses on Boole,  
Frege, Cantor, Hilbert,  
and Gödel, before  
turning to Turing.

Turing's analysis of  
algorithmic processes led  
to a single, all-purpose  
machine that could be  
programmed to carry out  
such processes—the  
computer. Davis  
describes how this  
incredible group, with  
lives as extraordinary as  
their accomplishments,  
grappled with logical  
reasoning and its  
mechanization. By  
investigating their  
achievements and  
failures, he shows how  
these pioneers paved the  
way for modern

computing. Bringing the material up to date, in this revised edition Davis discusses the success of the IBM Watson on Jeopardy, reorganizes the information on incompleteness, and adds information on Konrad Zuse. A distinguished prize-winning logician, Martin Davis has had a career of more than six decades devoted to the important interface between logic and computer science. His expertise, combined with his genuine love of the subject and excellent storytelling, make him the perfect person to tell this story.

This book constitutes the proceedings of two conferences: The 5th International Conference on ArtsIT, Interactivity and Game Creation (ArtsIT 2016) and the First International Conference on Design, Learning and Innovation (DLI 2016). ArtsIT is reflecting trends in the expanding field of digital art, interactive art, and how game creation is considered an art form. The decision was made

to augment the title of ArtsIT to be in future known as “ The International Conference on Interactivity, Game Creation, Design, Learning, and Innovation ” . The event was hosted in Esbjerg, Denmark in May 2016 and attracted 76 submissions from which 34 full papers were selected for publication in this book. The papers represent a forum for the dissemination of cutting-edge research results in the area of arts, design and technology.

### HarperCollins Leadership

Most people know that there are 70 million Baby Boomers in America today....but what is less known is that there are approximately 100 million people in America between the ages of 16 and 30. This generation has just entered, or will soon be entering the work force. And they have no idea how to invest, save, or handle their money. Young people today come out of school having had little or no formal education on the basics of money management. Many have large debts from student loans looming over their heads. And many feel

---

confused and powerless in real estate, budgeting when their pricey educations don't translate into high paying jobs. They feel that their \$30,000-\$40,000 salary is too meager to bother with investing, and they constantly fear that there will be "too much month left at the end of their money." Douglas R. Andrew has shown the parents of this generation a different pathway to financial freedom. Now Doug and his sons, Emron and Aaron - both of whom are in their mid-20s - show the under-30 crowd how they can break from traditional 401k investment plans and instead can find a better way by investing effectively, avoiding unnecessary taxes and using life insurance to create tax-free income. With the principles outlined in Millionaire by Thirty, recent graduates will be earning enough interest on their savings to meet their basic living expenses by the time they're 30. And by the time they're 35, their investments will be earning more money than they are, guaranteeing them a happy, wealthy future. 'Til Death Do Us Un-Part Pearson Education

Open geospatial science and technology is an increasingly important paradigm that offers the opportunity to promote the democratization of geographical information, the transparency of governments and institutions, as well as social, economic and urban opportunities. During the past decade, developments

in the area of open geospatial data have greatly increased. The open source GIS research community believes that combining free and open software, open data, as well as open standards, leads to the creation of a sustainable ecosystem for accelerating new discoveries to help solve global cross-disciplinary urban challenges. The vision of this book is to enrich the existing literature on this topic, and act one step towards more sustainable cities through employment of open source GIS solutions that are reproducible. Various contributions are provided and practically implemented in several urban use cases. Therefore, apart from researchers, lecturers and students in the geography/urbanism domain, crowdsourcing and VGI domain, as well as open source GIS domain, it is believed the specialists
