Mobilizing the Past is a collection of 20 articles that explore the use and impact of mobile digital technology in archaeological field practice.

The detailed case studies present in this volume range from drones in the Andes to iPads at Pompeii, digital workflows in the American Southwest, and examples of how bespoke, DIY, and commercial software provide solutions and craft novel challenges for field archaeologists. The range of projects and contexts ensures that Mobilizing the Past for a Digital Future is far more than a state-of-the-field manual or technical handbook. Instead, the contributors embrace the growing spirit of critique present in digital archaeology. This critical edge, backed by real projects, systems, and experiences, gives the book lasting value as both a glimpse into present practices as well as the anxieties and enthusiasm associated with the most recent generation of mobile digital tools. This book emerged from a workshop funded by the National Endowment for the Humanities held in 2015 at Wentworth Institute of Technology in Boston. The workshop brought together over 20 leading practitioners of digital archaeology in the U.S. for a weekend of conversation. The papers in this volume reflect the discussions at this workshop with significant additional content.

Starting with an expansive introduction and concluding with a series of reflective papers, this volume illustrates how tablets, connectivity, sophisticated software, and powerful computers have transformed field practices and offer potential for a radically transformed discipline.

Using nook is a unique resource that goes beyond the manual and includes comprehensive information on locating third-party books and other specialty

topics. It provides tutorials for doing basic tasks and is comprised of valuable tips on how to get the most from the device rather than focusing purely on basic usability. The author, Jim Cheshire, has been entrenched in nook research and use since he first heard about the new device. He has delved into every aspect of it, hacked it, tweaked it, etc. Even before getting his hands on one, he researched it and listened to the experts discuss its use. He is an early adopter and firm believer in the product and doesn't hesitate to make the claim that it is here to stay. Jim is a published Que author, an avid reader, and a self-proclaimed nook expert.

Between 1793 and 1815 two decades of unrelenting naval warfare raised the sailing man of war to the zenith of its effectiveness as a weapon of war. Every significant sea power was involved in this conflict, and at some point virtually all of them were arrayed against Great Britain. A large number of enemy warships were captured in battle and the Admiralty ordered accurate drafts to be made of many of these prizes. Consequently, ships from the navies of France, Spain, the United States, the Netherlands, Denmark, Sweden, as well as from Britain, were illustrated by an unprecedented variety of paintings, drawings, models or plans.

Wave watchers around the world know that no two waves are the same. Yet each and every wave that rises, peaks, and crashes onto the beach is generated by a much larger force originating thousands of miles away. Surf journalist team Evan Slater and Peter Taras capture the essence of waves and the swells that produce them in this breathtaking collection of wave photography. Slater characterizes four distinct swells from different corners of the globe and traces their journeys throughout the year from storm to seashore. His reflective, informative essays amplify these powerful images of hundreds of waves frozen in time, beautiful, simple, universal, yet wholly unique—and the best thing to watch on the planet.

The world's greatest migration of animal life occurs every evening when uncountable numbers of mostly small marine organisms rise up from the dark, chilly depths of the open ocean to its surface waters. The people who witness this nighttime migration are blackwater divers" € "brave divers who throw themselves off a boat in the dark of night in open ocean waters that are, for all practical purposes, bottomless. The animals that we encounter range in size from baby squids smaller than a pinky nail to forty-foot long jellyfish called siphonophores. Kona is the birthplace and world headquarters for blackwater diving. Its proximity to deep water and favorable ocean conditions make Hawai'i the perfect place for blackwater diving, but divers can also visit places

such as Florida, the Philippines, Indonesia, and even Papua New Guinea to see many similar animals. Blackwater Diving in Hawai'i is designed to satisfy the curious ocean aficionado by presenting beautiful photos and information on over 300 strange pelagic animals, most of which you won't find in a standard field guide to reef animals. This book is intended to present an overview of life in the open ocean at night. Each epipelagic creature is given five minutes in the spotlight to explore a little of what we know about them.
