"Nair writes big, brave descriptions of one brutal murder after the next, relentlessly describing each death even as sub-inspector Santosh loses his breakfast over them."—Time Out It's the first day of Ramadan in heat-soaked Bangalore. A young man begins to dress: makeup, a sari, and expensive pearl earrings. Before the mirror he is transformed into Bhuvana. She is a hijra, a transgender seeking love in the bazaars of the city. What Bhuvana wants, she nearly gets: a passing man is attracted to this elusive young woman—but someone points out that Bhuvana is no woman. For that, the interloper's throat is cut. A case for Inspector Borei Gowda, going to seed, and at odds with those around him including his wife, his colleagues, even the informers he must deal with. More corpses and Urmila, Gowda's ex-flame, are added to this spicy concoction of a mystery novel. Most intriguing is the grim world of Bhuvana. Her hijra fantasies, emotions, and hopes are etched in a way that is chilling yet oddly touching. Some mysteries remain till almost the end, for instance Bhuvana's connection with the wealthy, corrupt Corporator Ravikumar, who lives in a mansion as grand as the Mysore Palace and controls whole districts of Bangalore. Anita Nair lives in Bangalore and is a prize-winning author. Her novel Ladies Coupe, published in the United States by St. Martin's Press, is a feminist classic which has been

translated in thirty languages all over the world. This is her first crime novel.

"This is the first machine-generated scientific book in chemistry published by Springer Nature. Serving as an innovative prototype defining the current status of the technology, it also provides an overview about the latest trends of lithium-ion batteries research. This book explores future ways of informing researchers and professionals. State-of-the-art computer algorithms were applied to: select relevant sources from Springer Nature publications, arrange these in a topical order, and provide succinct summaries of these articles. The result is a cross-corpora auto-summarization of current texts, organized by means of a similarity-based clustering routine in coherent chapters and sections. This book summarizes more than 150 research articles published from 2016 to 2018 and provides an informative and concise overview of recent research into anode and cathode materials as well as further aspects such as separators, polymer electrolytes, thermal behavior and modelling. With this prototype, Springer Nature has begun an innovative journey to explore the field of machine-generated content and to find answers to the manifold questions on this fascinating topic. Therefore it was intentionally decided not to manually polish or copy-edit any of the texts so as to highlight the current status and remaining boundaries of machine-generated content. Our goal is to initiate a broad discussion, together with the research community and domain experts, about the future opportunities, challenges and limitations of this technology."--Publisher's website.

The contributors to this book focus on the relationship between nature and society from a variety of theoretical and ethnographic perspectives. Their work draws upon recent developments in social theory, biology, ethnobiology, epistemology, sociology of science, and a wide array of ethnographic case studies -- from Amazonia, the Solomon Islands, Malaysia, the Mollucan Islands, rural communities from Japan and north-west Europe, urban Greece, and laboratories of molecular biology and high-energy physics. The discussion is divided into three parts, emphasising the problems posed by the nature-culture dualism, some misguided attempts to respond to these problems, and potential avenues out of the current dilemmas of

ecological discourse.
