Nonprofits often struggle financially, overwhelmed by the need to muster a complex combination of income streams that range from grants and government funding to gifts-in-kind and volunteer labor. Financing Nonprofits draws upon a growing body of scholarship in economics and organizational theory to offer a conceptual framework for understanding this diverse mix of financing sources. By applying theory, readers can understand when a nonprofit organization should pursue particular sources of income and how it should manage its portfolio of income from different sources. Organized under the auspices of the National Center on Nonprofit Enterprise, Financing Nonprofits argues that those who would manage nonprofit organizations must first develop a conceptual framework through which they can understand the complicated and fast-paced landscape surrounding nonprofit decision-making. It offers a piece by piece analysis of the many potential components of nonprofit operating income, including a detailed study on how to accumulate the capital needed for major infrastructure projects or endowments and an examination of how to maintain a healthy investment profile once sufficient capital exists. By melding theory with practice, Young and the other contributors to Financing Nonprofits have created a volume that will serve as a practical guide to financing strategies for executive directors, CFOs, and board members of nonprofit organizations in a wide variety of fields; as a text for graduate students in nonprofit finance; and as a source of ideas for researchers to continue to probe and illuminate the many subtle issues associated with finding the right mix of resources to support the essential work of nonprofit organizations in our society. *Financial and Accounting Guide for Not-for-Profit Organizations* John Wiley & Sons

Public value theory has advanced over the past 30 years, but there is a need to extend its boundary outwards into new contexts and update its discourse to reflect new social challenges. We are now trying to create value in a globalized world, with supranational entities, with new international alliances and institutions, in a frightening post-truth era. How can public managers grapple with these emerging realities? This book seeks to provide answers to such public value questions by applying powerful budgeting perspectives. Using case studies of independent budget offices, key fiscal instruments, and leading public value frameworks, this book stands out in its use of budgetary lenses to answer pertinent questions about the multidimensional processes of value creation by and for a wider society. Pushing the debate on public value forward and taking it onto the global stage, the book asks whether public value (and other public administration theories) are applicable beyond the traditional context of the pro-globalization Western liberal democracies in which they were conceived. It does this by exploring the realms of developing countries, supranational entities, and post-Communist societies, among others. Finally, it presents these explorations in light of very recent sociopolitical trends and phenomena, including the growth of civil society, the global financial crisis, the illiberal democracy, and the post-truth era. Tailored to an audience comprising public administration scholars, students of government, budget practitioners, and social scientists interested in contemporary problems of values in society, this book helps to advance public administration thought by extending public value theory into new contexts and relating it to the growing global challenges of public life.

Social accounting as a discipline has challenged the methodology and focus of the larger field of accounting over the last 50 years. More recently it has taken on greater significance for other subjects as well, addressing issues for public policy and management more broadly. These include the issues of the nature of accountability in the contemporary plural state, environmental and societal sustainability, the ethical management and governance of public services and resources, and the creation and sustenance of social capital as an essential element of the modern plural state. Social Accounting and Public Management brings together for the first time researchers from a range of disciplines including accounting, political science, management, sociology and policy studies to discuss and develop our knowledge and theory of the nature of ‘ accountability ’ in contemporary global society and the challenges it may pose for public policy and management. This book addresses this nexus of all of these issues and disciplines, and through this, makes a contribution to the development of the disciplines of both social accounting and public policy and management.
