"Abstract: We present a taxonomic revision of the Colombian Tityus (Archaeotityus) species based on morphological and morphometric evidence. We examined more than 385 specimens and evaluated new and previously used qualitative and quantitative morphological characters. We redescribe the Colombian species and present morphological characters for both sexes and an emended diagnosis for the subgenus Tityus (Archaeotityus). We describe a new species Tityus guane sp. nov. from Santander department, Colombia, Tityus betschi Louren ç o 1992 is synonymized with Tityus parvulus Kraepelin, 1914, and Tityus wayuu Rojas-Runjaic & Armas, 2007 is synonymized with Tityus tayrona Louren ç o, 1991. We measured 186 specimens and performed a multivariate principal component analysis (PCA) for 34 selected morphometric ratios for each sex. We found that a few morphological ratios support species level distinctions within the Colombian species. We provide updated distributional maps with new records and an identification key for both sexes. Furthermore, we provide an updated checklist for the subgenus and a discussion about the character systems used within Tityus (Archaeotityus). The new

morphological characters proposed and the traditional morphometry examined with a PCA are useful for studying Tityus (Archaeotityus) taxonomy. The Archaeology of Colonial Encounters C H Dowding
Scholarly study of Samuel continues to wrestle with how we interpret this pivotal

text. Even such basic matters as the question of what kind of literature it is remain unresolved while older questions such as the nature of its text and sources are debated anew in the light of material from Qumran and of current approaches to Hebrew narrative. Recognizing the importance of questions such as these, David Firth explores and introduces fresh ways of reading Samuel as a unified and yet complex text, which displays high levels both of literary artistry and of theological commitment. Although some stories in the books of Samuel are well known, and in the case of David and Goliath even proverbial, much of the content of these books is strange to modern readers. It is a story about a woman wanting a child, for example, that relates the beginnings of monarchy within Israel. Even the question of the monarchy is problematic, for we are introduced to not one royal family but two—those of Saul and David. David is ultimately shown to be the king chosen by God, yet by the end of the book he is only just managing to hold on to the kingdom as it is nearly torn from him by rivalries within his family. These arresting stories are perplexing, for Samuel's writers seldom tell us how to read and interpret them. Firth presents these complex and fascinating stories as part of a bigger picture, enabling students to chart their way through the literary and historical issues of the Samuel narrative. Firth addresses issues of historicity, sources, date and authorship, as well as -- crucially -- appreciating the text as a literary whole.

A concise illustrated guidebook for those wishing to explore and know more about the storied gateway that made possible Alabama's development Forged through the territory of the Creek Nation by the United States federal government, the Federal Road was developed as a communication artery linking the east coast of the United States with Louisiana. Its creation amplified already tense relationships between the government, settlers, and the Creek Nation, culminating in the devastating Creek War of 1813 – 1814, and thereafter it became the primary avenue of immigration for thousands of Alabama settlers. Central to understanding Alabama ' s territorial and early statehood years, the Federal Road was both a physical and symbolic thoroughfare that cut a swath of shattering

change through the land and cultures it traversed. The road revolutionized Alabama ' s expansion, altering the course of its development by playing a significant role in sparking a cataclysmic war, facilitating unprecedented American immigration, and enabling an associated radical transformation of the land itself. The first half of *The Old Federal Road in Alabama: An Illustrated Guide* offers a narrative history that includes brief accounts of the construction of the road, the experiences of historic travelers, and descriptions of major changes to the road over time. The authors vividly reconstruct the course of the road in detail and make use of a wealth of well-chosen illustrations. Along the way they give attention to the very terrain it traversed, bringing to life what traveling the road must have been like and illuminating its story in a way few others have ever attempted. The second half of the volume is divided into three parts—Eastern, Central, and Southern—and serves as a modern traveler ' s guide to the Federal Road. This section includes driving tours and maps, highlighting historical sites and surviving portions of the old road and how to visit them.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime

Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs

A new chapter on Differential GPS and active GPS reference networks is included. The GPS modernization plans, GLONASS, the forthcoming European system GALILEO, modern developments in GPS data analysis, error modelling, precise real time methods and ambiguity resolution are dealt with in detail. New satellite laser ranging missions, new altimetry missions (e.g. TOPEX/Poseidon, ERS-1/2, GFO, JASON), and new and forthcoming gravity field missions (CHAMP, GRACE, GOCE) are also considered. The book serves as a textbook for advanced undergraduate and graduate students, as well as a reference for professionals and scientists in the field of engineering and geosciences such as geodesy, surveying, geo-information, navigation, geophysics and oceanography.

In sub-Saharan Africa, older people make up a relatively small fraction of the total population and are supported primarily by family and other kinship networks. They have traditionally been viewed as repositories of information and wisdom, and are critical pillars of the community but as the HIV/AIDS pandemic destroys family systems, the elderly increasingly have to deal with the loss of their own support while absorbing the additional responsibilities of caring for their orphaned grandchildren. Aging in Sub-Saharan Africa explores ways to promote U.S. research interests and to augment the sub-Saharan governments' capacity to address the many challenges posed by population aging. Five major themes are explored in the book such as the need for a basic definition of "older person," the need for national governments to invest more in basic research and the coordination of data collection across countries, and the need for improved dialogue between local researchers and policy makers. This book makes three major recommendations: 1) the development of a research agenda 2) enhancing research opportunity and implementation

and 3) the translation of research findings.
