This book provides critical insights into the English-medium instruction (EMI) experiences which have been implemented at a number of universities in countries such as China, Finland, Israel, the Netherlands, South Africa,

Spain and the USA, which are characterised by differing political, cultural and sociolinguistic situations. In particular, it reflects on the consequences of implementing EMI as an attempt to gain visibility and as a strategy in response to the need to become competitive in both national and international markets. The pitfalls and challenges specific to each setting are analysed, and the pedagogical issues and methodological implications that arise from the implementation of these programmes are also discussed. This volume will serve to advance our awareness about the strategies and tools needed to improve EMI at tertiary level.

This book brings together empirical research and conceptual work on textbooks and education media from 13 countries and 17 disciplines. Along with textbook production, usage, and development, it also explores the interconnectedness of (educational) policy and teaching and learning materials. Further, the book offers insights into regional and local discourses (e.g. specific theories of Portuguese- and Spanish-speaking countries as well as Nordic countries, contrasting their theories with international literature), practices, and

solutions with regard to teaching selected subjects at the pre-primary, primary, secondary, and tertiary level. This book also discusses the specific combinations of subjects (e.g. Physics, Biology, Geography, Swedish, English) and their subject-specific education (e.g. Physics Education or Didactics). Lastly, it examines the work of a number of early-career researchers, giving them a voice and bringing in fresh ideas currently being developed in various countries around the globe. This proceedings volume will appeal to publishers, subject educators in primary, secondary, and tertiary education, and academic researchers from the fields of textbooks, educational media and subject-specific education. Its international authorship and explicit focus on subject-specific particularities of educational media provide a unique and comprehensive overview.

This book aims to provide a coherent and thoughtful framework for viewing the complex issues related to grading and reporting student learning. The primary goal of grading and reporting is recognized as communication, and grading and reporting are seen to be integral parts of the instructional process. Chapter 1 explores why grading and reporting methods should be changed, and chapter 2 considers some lessons from the past and recent research that should be applied. Several broad guidelines are presented in chapter 3. Chapter 4 explains why report cards are not enough alone. Chapters 5 and 6 review the grading methods that work best. How to grade and report on the achievement of students with special needs is the focus of chapter 7. Chapter 8 explores the major problems that should be addressed in grading and reporting, and chapter 9 considers some exemplary models of reporting systems that could be used. Chapter 10 describes the reporting

tools that could be used in a comprehensive reporting system. (Contains 6 tables, 23 figures, and 241 references.) (SLD)

Educational Innovation in Economics and Business
Springer

The economics of education is a burgeoning area of study, employing increasingly sophisticated analytical tools to answer questions with high societal impact. Thus, the aim of this handbook is to provide readers with an up-to-date overview of the current state of the field of the economics of education and its main areas of research. This

comprehensive handbook provides an authoritative overview of key theoretical and policy areas, covering topics like econometric methods for education economics, returns to education, competition in education provision, education and economic growth, and education and inequality. It reviews the current state of research from early childhood through postgraduate education as well as adult education and life-long learning. Offering a truly international perspective, the handbook benefits from a global group of contributors and attention to both developed and developing country contexts. The Routledge Handbook of the Economics of Education will be a valuable resource for advanced students, researchers, and policymakers across economics, education, and public policy.

This eminently relevant and thoroughly entertaining book reminds us that understanding more about health care helps us understand the larger world around us. With technological advances and information sharing so prevalent, health care should be more transparent and easier to access than ever before. So why does it seem like everything about it—from pricing, drug development, and the emergence of new diseases to the intricacies of biologic and precision medicine therapies—is becoming more complex, not

less? Rohit Khanna's *Misunderstanding Health* examines some of today's most revealing health care trends while imploring us to look at these issues with alacrity, humor, and vigilance. Over the course of eighteen short, engaging chapters, Khanna explains

- how unexamined beliefs can endanger patients, drive cost, and increase bureaucracy
- the "Dr. Google" effect on the ways that we seek (or eschew) care
- why our health care costs more than in any other country
- the unintended consequences of using rating sites like Yelp
- what we can learn about health care from hurricanes
- how social media influencers impact health care
- how artificial intelligence can improve health care
- why health screening programs are so complicated
- what the industry is doing to combat health care fraud
- what the big deal about legalizing medical cannabis is
- how to

think about behavioral "nudges" designed to improve health • why understanding how data are collected is critical to understanding what they can tell us • and much more Each provocative and easy-to-read chapter covers a familiar aspect of health care in a clear and succinct way. Offering inquisitive readers a warts-and-all view of American health care, *Misunderstanding Health* is the book that you'll want to read if you know enough to be frustrated by the system but want a deeper dive into its challenges and opportunities.

We are pleased to introduce this inaugural volume in the PSCIE Series—*Beyond the Comparative: Advancing Theory and Its Application to Practice*—which expands on the life work of University of Pittsburgh Professor Rolland G. Paulston (1929-2006). Recognized as a stalwart in the field of comparative and international

education, Paulston's most widely recognized contribution is in social cartography. He demonstrated that mapping comparative, international, and development education (CIDE) is no easy task and, depending on the perspective of the mapper, there may be multiple cartographies to chart. The 35 contributors to this volume, representing a range of senior and junior scholars from various CIDE backgrounds and perspectives, celebrate the life and work of Paulston by addressing issues, perspectives and approaches related to charting the future course of the field. The volume reports on new research in several genres as well as conceptual analysis. As the title suggests, authors were encouraged to go "beyond" established canons of CIDE. The cover art, *The CIDE Theoretical Compass*, was conceptualized by the editors and depicts that theory selection and theory generation are an ongoing and important process in comparative, international, and development education (CIDE).

The image was designed by artist Natalie Jacob, which positions the CIDE Theoretical Compass over Rolland G. Paulston 's 1993 concentric circle map.

The Practice of Statistics Springer Nature Emphasizing applications over calculation, worldwide-bestseller STATISTICS FOR MANAGEMENT AND ECONOMICS, ABBREVIATED 10e demonstrates how vital statistical methods are for today's managers and economists – and teaches students how to apply these tools to real business problems. Written specifically for the one-term modern business statistics course, the text uses a unique three-step ICI approach to problem solving. This approach teaches students to IDENTIFY the correct statistical technique by focusing

on the problem objective and data type, then COMPUTE the statistics (doing them by hand, using Excel 2013, or using MINITAB 16), and ultimately INTERPRET results in the context of the problem. Incorporating various functional areas of business, data-driven examples, exercises, and cases give students plenty of hands-on practice applying statistical applications used by marketing managers, financial analysts, accountants, economists, and others.
