The White Paper sets out the Government's proposals to further reform the management of schools in England, with the aim of creating a system shaped by parental choice where schools have greater autonomy in admissions policy. Proposals include: i) the role of local education authorities confined to being a local commissioner of services rather than an education provider, with a focus on raising standards through spreading best practice and championing parental choice; ii) each school able to acquire a self-governing trust status (similar to the network of Academies) or become a self-governing foundation school; iii) an increased role for new providers and the creation of a national Schools Commissioner to drive change and to promote the development of trust schools; iv) an expansion in the number of Academies to 200 by the year 2010 and easier provision for independent schools to enter the state system; v) the weakest schools to be given one year to improve standards or face closure, whilst high performing schools will have reduced bureaucracy and a lighter touch inspection regime; vi) increased provision for free school transport for poorer pupils; and vii) the introduction of a right for teachers to discipline pupils.

Teach math lessons through the creative means of a life story Provide 36 weeks of instruction based on skill levels rather than grade levels Guide students by the use of inexpensive manipulatives, including index cards, dried beans, and construction paper! We often tend to compartmentalize when teaching children. In real life, there aren't artificial barriers between "subjects." For example, when you are cooking or baking, you have to use the skills of reading, logical

thinking, and measuring, just to name a few. In driving a car, you see and read road signs, read maps, and count miles. So why do we say to children, "This is math, this is language, this is about science and nature, and this is history"? The most natural and effective means to teach children is through life examples. Content, story, and the ability to show math in real life make a living math book!

This book explores the unique experiences of a sister school network in Canada and China contextualized through the lens of

the Reciprocal Learning Project, which supports the relationship between a school network and teacher education exchange program of two countries. Huang uses theoretical viewpoints from teacher learning and comparative education research to analyse and interpret what has happened in the emerging cross-cultural school network. The book juxtaposes teacher learning and comparative education research from Shanghai and Ontario as teachers in the two places interact and provides detailed descriptions of teacher collaboration to show how these collaborations were initiated, developed, and sustained, as well as the impact brought about from these collaborations. The book offers a unique opportunity to examine how Canadian and Chinese teachers receive and react to opportunities of cross-cultural collaboration and learning.

Within educational research that seeks to understand the quality and effectiveness of teachers and school, the role emotions play in educational change and school improvement has become a subject of increasing importance. In this book, scholars from around the world explore the connections between teaching, teacher education, teacher emotions, educational change and school leadership. (For this text, "teacher" encompasses pre-service teachers, in-service teachers and headteachers, or principals). New Understandings of Teacher's Work: Emotions and Educational Change is divided into four themes: educational change; teachers

and teaching; teacher education; and emotions in leadership. The chapters address the key basic and substantive issues relative to the central emotional themes of the following: teachers' lives and careers in teaching; the role emotions play in teachers' work; lives and leadership roles in the context of educational reform; the working conditions; the context-specific dynamics of reform work; school/teacher cultures; individual biographies that affect teachers' emotional well-being; and the implications for the management and leadership of educational change, and for development, of teacher education.

A thinking student is an engaged student Teachers often find it difficult to implement lessons that help students go beyond rote memorization and repetitive calculations. In fact, institutional norms and habits that permeate all classrooms can actually be enabling "non-thinking" student behavior. Sparked by observing teachers struggle to implement rich mathematics tasks to engage students in deep thinking, Peter Liljedahl has translated his 15 years of research into this practical guide on how to move toward a thinking classroom. *Building Thinking Classrooms in Mathematics, Grades K–12*

helps teachers implement 14 optimal practices for thinking that create an ideal setting for deep mathematics learning to occur. This guide Provides the what, why, and how of each practice and answers teachers' most frequently asked questions Includes firsthand accounts of how these practices foster thinking through teacher and student interviews and student work samples Offers a plethora of macro moves, micro moves, and rich tasks to get started Organizes the 14 practices into four toolkits that can be implemented in order and built on throughout the year When combined, these unique research-based practices create the optimal conditions for learner-centered, student-owned deep mathematical thinking and learning, and have the power to transform mathematics classrooms like never before.

This strategic paper discusses Ethiopia’s growth and transformation plan (GTP) for the periods 2010/2011 and 2014/2015. The Ethiopian government’s main development agenda has been poverty eradication. The government has designed, and is implementing, strategies, policies, and plans to guide and manage the overall development of the country accordingly. The GTP envisages that, besides maintaining a fast-growing economy, better results will be realized in all sectors. Implementation of the GTP requires mobilization of financial and human resources, especially for infrastructure development.
