The Murder of the Middle Class Oswaal Books and Learning Private Limited Knowledge, Class, and Economics: Marxism without Guarantees surveys the "Amherst School" of non-determinist Marxist political economy, 40 years on: its core

concepts, intellectual origins, diverse pathways, and enduring tensions. The volume 's 30 original essays reflect the range of perspectives and projects that comprise the Amherst School—the interdisciplinary community of scholars that has enriched and extended, while never ceasing to interrogate and recast, the anti-economistic Marxism first formulated in the mid-1970s by Stephen Resnick, Richard Wolff, and their economics Ph.D. students at the University of Massachusetts-Amherst. The title captures the defining ideas of the Amherst School: an open-system framework that

presupposes the complexity and contingency of social-historical events and the parallel "overdetermination" of the relationship between subjects and objects of inquiry, along with a novel conception of class as a process of performing, appropriating, and distributing surplus labor. In a collection of 30 original essays, chapters confront readers with the core concepts of overdetermination and class in the context of economic theory, postcolonial theory, cultural studies, continental philosophy, economic geography, economic anthropology, psychoanalysis, and

literary theory/studies. Though Resnick and Wolff ' s writings serve as a focal point for this collection, their works are ultimately decentered—contested, historicized, reformulated. The topics explored will be of interest to proponents and critics of the post-structuralist /postmodern turn in Marxian theory and to students of economics as social theory across the disciplines (economics, geography, postcolonial studies, cultural studies, anthropology, sociology, political theory, philosophy, and literary studies, among others).

The adoption and management of the common currency has led the Eurozone to a critical point. This book analyzes in an interdisciplinary way the fundamental causes of distress, making sure to relate economic issues to the social and political aspects of the problem. The book explores the reasons why the Eurozone has fallen into a policy trap, as well as what Europe did and should do to exit the crisis, and why

this is proving to be so difficult. The book also considers what role the United States has played, and could play to help foster a solution for the Eurozone. The main topics explored are the complex nature of the crisis, the short circuit between policies and the given institutional architecture, the controversial role of Germany, and the importance of an active role of the US. The book brings together a transatlantic group of scholars in order to offer an interdisciplinary analysis of the deep causes of the Eurozone distress. The authors recognize that the Eurozone countries have contrasting situations and interests and face different problems with complex consequences for the vexed question of national sovereignty within the EU; and pay attention to the social and political consequences of the economic and financial distress and of the perceived strain of the common currency.
