Your online and in-store purchasing patterns are recorded, and reveal if you're unemployed, sick, or pregnant. Your e-mails and texts expose your intimate and casual friends. Google knows what you're thinking because it saves your private

searches. Facebook can determine your sexual orientation without you ever mentioning it. The powers that surveil us do more than simply store this information. Corporations use surveillance to manipulate not only the news articles and advertisements we each see, but also the prices we're offered. Governments use surveillance to discriminate, censor, chill free speech, and put people in danger worldwide. And both sides share this information with each other or, even worse, lose it to cybercriminals in huge data breaches. Much of this is voluntary: we cooperate with corporate surveillance because it promises us convenience, and we submit to government surveillance because it promises us protection. The result is a mass surveillance society of our own making. But

have we given up more than we've gained? In *Data and Goliath*, security expert Bruce Schneier offers another path, one that values both security and privacy. He brings his bestseller up-to-date with a new preface covering the latest developments, and then shows us exactly what we can do to reform government surveillance programs, shake up surveillance-based business models, and protect our individual privacy. You'll never look at your phone, your computer, your credit cards, or even your car in the same way again.

This volume offers a wide-reaching overview of current academic research on women's participation in combat sports within a range of different national and trans-national contexts, detailing many of the struggles and opportunities experienced by women at various levels of engagement within sports such as boxing, wrestling, and mixed martial arts.

Final Report of the Truth and Reconciliation Commission of Canada, Volume One: Summary Hachette Books

The control freak. The angry man. The lazy guy. The unteachable guy. The promiscuous man. The unbeliever. The lone ranger. The unchurched guy. The new convert. The commitment-phobe. For any woman who has struggled with failed relationships, this may seem like a familiar list. These are the men your friends and family have in mind when they think, "she's with the wrong guy."

And while the reasons women choose these types of men are complicated and varied, ultimately, they will all let you down. In *She's Got the Wrong Guy*, Deepak Reju offers a different kind of dating book, discussing the types of guys women should not marry and offering biblical reasons why they aren't suitable spouses. Writing from his years of experience as a pastor and counselor, Reju shares with women his perspective on how to assess a relationship's strengths from the beginning, how to identify possible pitfalls, and how to have the courage to wait for a relationship that will be a blessing for both of you. Using stories that single women can relate to and highlighting contemporary issues in the modern world of dating, Reju gives readers clear, biblical direction on how to have positive, life-giving relationships with members of the opposite sex. With a strong, Christ-centered focus, women will better understand why they "settle" for less than what God intends for their romantic relationships and learn to put their hopes and find their happiness in Jesus, not marriage.

How do the moral panics that have plagued school education since its nineteenth-century beginnings impact current school education policy? Research has shown young people to be particularly vulnerable to moral panics and, with the rise of social media, the impact of moral panics on school education is growing exponentially. Increasingly, they are reaching into the highest levels of national governments and, so powerful are their effects, some politicians choose to orchestrate them for their own political ends. For many educational

---

administrators, the management of the 'fallout' of moral panics has become a time-consuming part of their day, as well as being a problematic time for parents, teachers and students. First developed by British and Canadian sociologists such as Stanley Cohen (1972), moral panic theory has evolved substantially since its early focus on adolescent deviant behaviour, and is now a part of common media talk. This book addresses the need for a single monograph on the topic, with reference to historical moral panics such as those associated with sexuality education, but also wider societal moral panics such as those associated with obesity. Teachers, students, indeed all members of school communities, along with educational administrators and politicians can learn from this study of the impact of moral panics on school educational policy.

This book charts the transformative shifts in techniques that seek to deliver collective redress, especially for mass consumer claims in Europe. It shows how traditional approaches of class litigation (old technology) have been eclipsed by the new technology of regulatory redress techniques and consumer ombudsmen. It describes a series of these techniques, each illustrated by leading examples taken from a 2016 pan-EU research project. It then undertakes a comparative evaluation of each technique against key criteria, such as effective outcomes, speed, and cost. The book reveals major transformations in European legal systems, shows the overriding need to view legal systems from fresh viewpoints, and to devise a new integrated model.

of youth sport and causing it to erode the ideal mantra: “ It ’ s all about the kids. ” In Best Practice for Youth Sport, readers will gain an appreciation of an array of issues regarding youth sport. This research-based text is presented in a practical manner, with examples from current events that foster readers ’ interest and class discussion. The content is based on the principle of developmentally appropriate practice (DAP), which can be defined as engaging in decisions, behaviors, and policies that meet the physical, psychological, and social needs of children and youth based on their ages and maturational levels. This groundbreaking resource covers a breadth of topics, including bone development, burnout, gender and racial stereotypes, injuries, motor behavior, and parental pressures. Written by Robin S. Vealey and Melissa A. Chase, the 16 chapters of Best Practice for Youth Sport are divided into four parts. Part I, Youth Sport Basics, provides readers with the fundamental knowledge and background related to the history, evolution, and organization of youth sport. Part II, Maturation and Readiness for Youth Sport Participants, is the core of understanding how and why youth sport is different from adult sport. This part details why it is important to know when youth are ready to learn and compete. Part III, Intensity of Participation in Youth Sport, examines the appropriateness of physical and psychological intensity at various developmental stages and the potential ramifications of overtraining, overspecialization, overstress, and overuse. The text concludes with part IV, Social Considerations in Youth Sport, which examines how youth sport coaches and parents can help create a supportive social environment so that children can maximize the enjoyment and benefits from youth sport.

In addition to 14 appendixes, activities, glossaries, study questions, and other resources that appear in Best Practice for Youth Sport, the textbook is enhanced with instructor ancillaries: a test package, image bank, and instructor guide that features a syllabus, additional study questions and learning activities, tips on teaching difficult concepts, and additional readings and resources. These specialized resources ensure that instructors will be ready for each class session with engaging materials. Ancillaries are free to course adopters and available at [www.HumanKinetics.com/BestPracticeForYouthSport](http://www.HumanKinetics.com/BestPracticeForYouthSport). Best Practice for Youth Sport provides readers with knowledge of sport science concerning youth sport and engages them through the use of anecdotes, activities, case studies, and practical strategies. Armed with the knowledge from this text, students, coaches, parents, administrators, and others will be able to become active agents of social change in structuring and enhancing youth sport programs to meet the unique developmental needs of children, making the programs athlete centered rather than adult centered so that they truly are all about the kids.

Evidence, Concepts, Methods Avery  
From a leading financial economist, a searching examination of the ethics of modern finance. In 2001, Goldman Sachs structured a complex financial contract so that its client, the government of Greece, would appear to have far less debt than it actually did. When news of this transaction came out years later, the inevitable question arose: Even though Goldman ’ s actions were legal, were they ethically wrong? Is modern finance itself inherently unethical? In Something for Nothing, financial economist Maureen O ’ Hara explains that one of the key innovations of modern finance is its reliance on arbitrage, the practice of taking advantage of a

---

price difference between two or more markets to generate profits and remove inefficiencies. When done correctly, arbitrage can create value at little or no cost (in effect, getting “ something for nothing ” ); but it can also be an exploitative tool. In a lucid, insightful discussion of the ethics of arbitrage in modern finance, O ’ Hara reveals how the rules can often be stretched into still-legal yet highly unethical business practices. Examining key cases in clear and persuasive prose, O ’ Hara illuminates various aspects of financial ethics, from the Goldman Greek transaction to Lehman Brothers ’ attempt to cover up its debt, JPMorgan Chase ’ s maneuvers in California ’ s energy markets, Bernie Madoff ’ s trading strategies in the 1980s, high-frequency trading practices, and toxic loans in France. Ultimately, O ’ Hara turns to philosophy and religion to argue for a new, humanistic approach to ethics in the financial industry. She makes a strong case for a way forward: fewer rules and more standards to foster a morally responsible outlook. Fearlessly raising the questions at the moral heart of our financial system, *Something for Nothing* is a masterful treatise on the ethics of modern finance.

Now more than ever, American dads act as hands-on caregivers who are devoted to keeping themselves and their families healthy. Yet, men are also disproportionately likely to neglect their own health care, diets, and exercise routines—bad habits that they risk passing on to their children. In *Dads, Kids, and Fitness*, William Marsiglio challenges dads to become more health-conscious in how they live and raise their children. His conclusions are drawn not only from his revealing interviews with a diverse sample of dads and pediatric healthcare professionals, but also from his own unique personal experiences—as a teenage father who, thirty-one years later, became a later-life dad to a second son. Marsiglio ’ s research highlights

the value of treating dads as central players in what he calls the social health matrix, which can serve both healthy children and those with special needs. He also outlines how schools, healthcare facilities, religious groups, and other organizations can help dads make a positive imprint on their families ’ health, fitness, and well-being. Anchored in compelling life stories of joy, tragedy, and resilience, *Dads, Kids, and Fitness* extends and deepens public conversation about health at a pivotal historical moment. Its progressive message breathes new life into discussions about fathering, manhood, and health.

Tony Abbott is poised to become the nation's next prime minister and, more than ever, Australian's are asking- what kind of man is he and how might he run the country? David Marr's *Political Animal*, with its revelation of 'the punch,' triggered intense scrutiny of Abbott's character in 2012. Now this expanded and updated edition of Marr's dramatic portrait gives the clearest picture yet of Abbott the man and politician. Marr shows him thriving on chaos and conflict. Part fighter and part charmer, Abbott is deeply

religious and deeply political. What happens when his values clash with his absolute determination to win? That is the great puzzle of a career that began as a wild university politician in the 1970s and seem destined to end in the Lodge. How to Save Yourself and Your Family from the Criminal Conspiracy of the Century Vision and Visual Perception

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases.

Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the

influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents.

Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

“ We are the primary drivers of change. We will directly and indirectly determine what lives, what dies, where, and when. We are in a different phase of evolution; the future of life is now in our hands. ”  
Why are rates of conditions like autism, asthma, obesity, and allergies exploding at an unprecedented pace? Why are humans living longer, getting smarter, and having far fewer kids? How might your lifestyle affect your unborn children and grandchildren? How will gene-editing technologies like CRISPR steer the course of human evolution? If Darwin were alive today, how would he explain this new world? Could our progeny eventually become a different species—or several? In *Evolving Ourselves*, futurist Juan Enriquez and scientist Steve Gullans conduct a sweeping tour of how humans are changing the course of evolution—sometimes intentionally, sometimes not. For example: • Globally, rates of

---

obesity in humans nearly doubled between 1980 and 2014. What ' s more, there ' s evidence that other species, from pasture-fed horses to lab animals to house cats, are also getting fatter. • As reported by U.S. government agencies, the rate of autism rose by 131 percent from 2001 to 2010, an increase that cannot be attributed simply to increases in diagnosis rates. • Three hundred years ago, almost no one with a serious nut allergy lived long enough to reproduce. Today, despite an environment in which food allergies have increased by 50 percent in just over a decade, 17 million Americans who suffer from food allergies survive, thrive, and pass their genes and behaviors on to the next generation. • In the pre-Twinkie era, early humans had quite healthy mouths. As we began cooking, bathing, and using antibiotics, the bacteria in our bodies changed dramatically and became far less diverse. Today the consequences are evident not only in our teeth but throughout our bodies and minds. Though these harbingers of change are deeply unsettling, the authors argue that we are also in an epoch of tremendous opportunity. New advances in biotechnology help us mitigate the cruel forces of natural selection, from saving prematurely born babies to gene therapies for sickle cell anemia and other conditions. As technology like CRISPR enables us to take control of our genes, we will be able to alter our own species and many others—a good thing, given that our eventual survival will require space travel and colonization, enabled by a fundamental redesign of our bodies. Future humans could become great caretakers of the planet, as well as a more diverse, more resilient, gentler, and more intelligent species—but only if we make the right choices now. Intelligent, provocative, and optimistic, *Evolving Ourselves* is the ultimate guide to the next phase of life on Earth.
