This book is a celebration of mathematical problem solving at the level of the high school American Invitational Mathematics Examination. There is no other book on the market focused on the AIME. It is intended, in part, as a resource for comprehensive study and practice for the AIME competition for students, teachers, and mentors. After all, serious AIME contenders and competitors should seek a lot of practice in order to succeed. However, this book is also intended for anyone who enjoys solving problems as a recreational pursuit. The AIME contains many problems that have the power to foster enthusiasm for mathematics - the problems are specialization, setting, affiliation, accreditation, subjects offered, special academic fun, engaging, and addictive. The problems found within these pages can be used by teachers who wish to challenge their students, and they can be used to foster a community of lovers of mathematical problem solving! There are more than 250 fully-solved problems in the book, containing examples from AIME competitions of the 1980 's, 1990 's, 2000 's, and 2010 's. In some cases, multiple solutions are presented to highlight variable approaches. To help problem-solvers with the exercises, the author provides two levels of hints to each exercise in the book, one to help stuck starters get an idea how to begin, and another to provide more guidance in navigating an approach to the solution.

In the 20th century, many mathematicians in Russia made great contributions to the field of mathematics. This invaluable book, which presents the main achievements of Russian mathematicians in that century, is the first most comprehensive book on Russian mathematicians. It has been produced as a gesture of respect and appreciation for those mathematicians and it will serve as a good reference and an inspiration for future mathematicians. It presents differences in mathematical styles and focuses on Soviet mathematicians who often discussed "what to do" rather than "how to do it". Thus, the book will be valued beyond historical documentation. The editor, Professor Yakov Sinai, a distinguished Russian mathematician, has taken pains to select leading Russian mathematicians - such as Lyapunov, Luzin, Egorov, Kolmogorov, Pontryagin, Vinogradov, Sobolev, Petrovski and Krein - and their most important works. One can, for example, find works of Lyapunov, which parallel those of Poincaré; and works of Luzin, whose analysis plays a very important role in the history of Russian mathematics; Kolmogorov has established the foundations of probability based on analysis. The editor has tried to provide some parity and, at the same time, included papers that are of interest even today. The original works of the great mathematicians will prove to be enjoyable to readers and useful

Memoirs from the Turbulent Years and Beyond Kogan Page Publishers

In the Introduction, I briefly examined the war between born again Poland in 1918 after over 120 years of foreign oppression and the Bolshevik/Communist Russia in 1920. This was the first Bolshevik/Communist Russian Expansionist War. The Bolsheviks/Communists under the leadership of Lenin started this war, hoping for quick victory over a very weak Poland, just starting the unifying process after long oppression. Poland was partitioned by Germany, Russia, and the Austro-Hungarian Empire by the end of the eighteenth century. The goal of Lenin and his horde of Communist disciples, as well as of the Communist international banditry, was to conquer Poland. In addition, very soon afterward, they pushed into Germany, who was defeated in WWI and struggling economically with no army and very poor people. German Communists were trying to fully exploit this situation and start a revolution immediately after Poland was defeated and opened the door to Western Europe for Communist conquest. Unfortunately for Lenin, the mass murderer and his Communist Red Army hordes, it was no victory. They were defeated at Warsaw, and they retreated rapidly northeast and a few months later, they signed the Peace Treaty in Riga, Latvia. Poland saved the Western civilization and Christianity in 1920 and stopped the spread of Communism to Western Europe. In the next part, WWII, I described the start of the war by the Germans invading Poland from the west, north, and south. In addition, sixteen days later, the Communist Soviet Union invaded from the east according to the pact between Hitler and Stalin, made in August of 1939. The Germans were taking western Poland. The Communist Soviet Union was taking Eastern Poland as two bandits, Hitler and Stalin, divided the loot and started plundering Poland. Germany and the Communist Soviet Union were equal aggressors, and they were equally responsible for starting WWII. Our family lived in western Poland, which was occupied by Germans. It was a brutal occupation. The Germans started building the concentration camps, like Auschwitz and others; however, for the first two years of occupation, all the prisoners were Polish Christians. From about the middle of 1942 to Auschwitz, Polish Jews started coming, and shortly after, Jews from other European countries occupied by Germans also arrived. The Germans committed horrendous crimes against the Polish Christians and Polish Jews under their occupation. The daily life in western Poland became very difficult and dangerous. The underground resistance army, called Home Army, was growing fast. The goal of the Home Army was to fight German occupants in many different forms. In eastern Poland, occupied by the Communist Soviet Union, the lives of the Polish people were dramatically becoming worse. They were methodically exterminated by Communist Soviets, the worst barbaric savages. The Communist Soviets were also sending Polish people by thousands daily to Siberian gulags, to slave labor. The Germans committed holocaust against Jewish people during WWII as well as holocausts against Polish people. The Communist Soviet Union, by order of Joseph Stalin and his Politburo, committed holocausts against Polish people in eastern Poland. During volume attends to the consequential societal and economic issue concerns of whether it can be increased, and WWII, Poland had the highest loss of population by percentage of total population, about 25 percent, the highest percentage of any nation in the world. When WWII ended in 1945, Poland was devastated beyond imagination, and the worst part was that the German occupation was exchanged for Communist Soviet Union occupation, which would last for a very long forty-five years. The years 1945-1968, covers the period of establishing Communist control over Poland beginning in 1945 until 1948 by Communists sent to Poland from Moscow. This was a very difficult time, when the Communist Soviets' NKVD/KGB and the Polish Communist gover A Family Guide IAP

Students' Accuracy in Written English Under the Impression of the new "G8" System - a Case Study via tolino media

Inhaltsangabe: Introduction: In Germany, education matters lie within the scope of each of the 16 German federal states. Consequently, there is no unique educational system which is valid for the entire Federal Republic of Germany, but 16 individual ones. However, a German-wide basic framework, including regulations about the compulsory school attendance for instance, does exist. The duration of compulsory schooling until passing the Abitur at the Gymnasium, however, is not regulated by this framework, but belongs to the power of decision of each federal state. For instance, in Thuringia and Saxony, the duration of compulsory schooling at the Gymnasium has been limited to eight years, as it was already the case before the reunification of Germany in 1990. In the other federal states, like North-Rhine Westphalia for example, the duration of compulsory schooling at the Gymnasium included an additional ninth year, resulting in the fact that the students attended the Gymnasium from grade 5 until grade 13. Nevertheless, in 2001, the ministry of education of the federal state Saarland decided for a reduction of the duration of compulsory schooling at the Gymnasium by one year. By now, all the other federal states have followed and therefore also made the decision for a reduced duration of only eight years at the Gymnasium. After many heated discussions, also the North-Rhine Westphalian ministry of education decided for a reduction of the duration of compulsory schooling at the Gymnasium. As a consequence of this decision, students of two grades (G8 and G9 students) entered the upper secondary level at all North-Rhine Westphalian Gymnasien on August 31st, 2010 (Ministerium für Schule und Weiterbildung des Landes Nordrhein-Westfalen, n.d.a). The students of this so-called Doppeljahrgang will all graduate in 2013 and therefore all of them will have to pass the same Abitur exams. Hence, it must be guaranteed that G8 students have the same preconditions as G9 students, despite having one year less of general schooling before graduating. Since no students have entered the upper secondary level after only five years at the Gymnasium in North-Rhine Westphalia before 2010, empirical research in this area is hardly available by now. Nevertheless, this Doppeljahrgang offers the unique chance of directly comparing G8 and G9 students in order to find out in how far the new G8 system was implemented successfully or not. Especially in the context of learning [...] Chapter-wise NCERT + Exemplar + Practice Questions Solutions for CBSE Mathematics Class 11 2nd edition Springer

This volume presents research from a variety of perspectives on the enhancement of human intelligence. It is organized around five themes - enhancement via instruction; enhancement via development (over the life cycle); enhancement over time; enhancement via new constructs; and new directions in enhancement. Three key issues are addressed: First, although most of the scientific research on intelligence has concerned what it is, this how. Second, intellectual enhancement is particularly important when targeted to minorities and the poor, groups that have typically performed relatively less well on intelligence and achievement measures. This volume reflects the education community's ongoing interest in understanding, and attempting to close, achievement or test score gaps. Third, most of the attention to examining intellectual enhancement, and in accounting for and closing the test-score gap, has focused on general cognitive ability. In line with the current emphasis on considering intelligence from a wider perspective, this volume includes constructs such as emotional and practical intelligence in definitions of intellectual functioning. Extending Intelligence: Enhancement and New Constructs is an essential volume for researchers, students, and professionals in the fields of educational psychology, intelligence, educational measurement and assessment, and critical thinking.
