On the train, on the beach,
on the sofa ... many people

in all parts of the world enjoy
doing wordsearches. If you
are studying English and
want to learn and practise
vocabulary related to various
topics, then this book is for
you! The topics reflect the
kinds of everyday
conversations that you might
have both with native and
non-native speakers of
English. The topics are also
those that are typically
tested in English
examinations e.g. TOEFL,
Cambridge (First Certificate,
Advanced), IELTS, and
Trinity. Each chapter begins
with a list of questions to
enable you to have a
conversation about a
particular topic in various
situations: on a social
occasion (e.g. a work dinner,
a conference lunch, a party);
in the classroom during an
English lesson; when
chatting, either face to face
or online; and during an
English oral exam. After the
list of questions, you will find
a Word List associated with
the topic and exercises to
test your knowledge of less
common words. The final
aim is then to find the words
from the Word List in the
related Wordsearch. Easy
English! is a series of books
to help you learn and revise
your English with minimal
effort. You can improve your
English by: reading texts in
English that you might
normally read in your own

language e.g. jokes,
personality tests, lateral
thinking games, and
wordsearches; doing short
exercises to improve specific
areas grammar and
vocabulary, i.e. the areas
that tend to lead to the most
mistakes - the aim is just to
focus on what you really
need rather than
overwhelming yourself with a
mass of rules, many of
which may have no practical
daily value. Other books in

 Research for Educational
 Change presents ways in
 which educational research
 can fulfil its commitments to
 educational practice.
 Focussing its discussion
 within the context of
 mathematics education, it
 argues that while research-
 generated insights can have
 beneficial effects on
 learning and teaching, the
 question of how these
 effects are to be generated
 and sustained is far from
 evident. The question of
 how to turn research into
 educational improvement is
 discussed here in the
 context of learning and
 teaching hindered by
 poverty and social injustice.
 In the first part of the book,
 four teams of researchers
 use different methodologies
 while analysing the same
 corpus of data, collected in
 a South African
 mathematics classroom. In
 the second part, each of
 these teams makes a
 specific proposal about what

can be done and how so that its research-generated insights have a tangible, beneficial impact on what is happening in mathematical classrooms. Combining two discourses – that of researchers speaking to one another, and that of researchers communicating their insights to those responsible for educational practice – the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education, educational research and classroom practices. This book will be key reading for postgraduates, researchers and academics in education and particularly in the areas of mathematics education, education research, teacher education and classroom practice. It will also appeal to teacher educators, practitioners and undergraduate students interested in educational research.
