China's emergence as the world's second largest economy has been driven by more than four decades of explosive growth. To support this expansion, China has required massive expansion in its steel production capacity, which is highly correlated to its demand for

iron ore imports. The scale and pace of China's iron ore demand shock has pushed the global iron ore market into a historical adjustment. Using economic frameworks, this book brings to bare new data and field observations throughout Asia and Africa to investigate how the rapid growth in China's iron ore demand has affected the organisation and structure of the global iron ore market. The research provides several important contributions to the extant literature including analysis of whether the Big Three Asian market iron ore exporters coordinated to sustain the profits arising from the price boom; estimating the financial impact of the Chinese state's intervention in iron price negotiations; and addressing the concerns arising from the Chinese state's provision of cheap financial support for its companies' iron ore procurement. Offering unique insights into

---

China's economic rise and the structure of the iron ore market, this book will be relevant to students and scholars of resource economics, and the Australian and Chinese economies.

State Wintergreen Orchard House

Online instruction is rapidly expanding the way administrators and educators think about and plan instruction. In addition, due to a pandemic, online instructional practices and learning in a virtual environment are being implemented with very little training or support. Educators are learning new tools and strategies at a quick pace, and often on their own, even through resistance. It is important to explore lessons learned through the pandemic but also of importance is sharing the virtual classroom options and instruction that align to best practices when transitioning to online instruction. Sharing these will allow educators to understand and learn that virtual instruction can benefit all, even when not used out of need, and can enhance face-to-face courses in many ways. The Handbook of Research on Lessons

Learned From Transitioning to Virtual Classrooms During a Pandemic is a critical reference that presents lessons instructors have learned throughout the COVID-19 pandemic including what programs and tools were found to be the most impactful and useful and how to effectively embed virtual teaching into face-to-face teaching. With difficult choices to be made and implemented, this topic and collection of writings demonstrates the learning curve in a state of survival and also lessons and resources learned that will be useful when moving back to face-to-face instruction as a tool to continue to use. Highlighted topics include the frustrations faced during the transition, lessons learned from a variety of viewpoints, resources found and used to support instruction, online learner perspectives and thoughts, online course content, and best practices in transitioning to online instruction. This book is ideal for teachers, principals, school leaders, instructional designers, curriculum developers, higher education professors, pre-service teachers, in-service teachers, practitioners, researchers,

---

and anyone interested in developing more effective virtual and in-classroom teaching methods.
