Reinforced plastics composites are increasingly in demand for the huge range of long-term applications - not surprisingly, as they are amongst the best materials in the world for durability. This exceptionally user-friendly guide has been written for engineers, designers and managers who are considering using reinforced plastics in applications where a long product life is essential, including buildings, bridges, boats, tanks, pipes and swimming pools. The book is clearly written and easily accessible to those with no background in composite science, although detailed references are provided for those wishing to pursue any area in more depth. After introducing the key concepts, there are chapters focusing on the effects of outdoor weathering, solvent and water attack, high temperature and repetitive stress. Experience with specific applications over time is discussed, and repair is considered. The use of computer techniques in predicting durability is outlined and there are some case histories.

Resources in Education

This book explores the consequences of lowering the voting age to 16 from a global perspective, bringing together empirical research from countries where at least some 16-year-olds are able to vote. With the aim to show what really happens when younger people can take part in elections, the authors engage with the key debates on earlier enfranchisement and examine the lead-up to and impact of changes to the voting age in countries across the globe. The book provides the most comprehensive synthesis on this topic, including detailed case studies and broad comparative analyses. It summarizes what can be said about youth political participation and attitudes, and highlights where further research

is needed. The findings will be of great interest to researchers working in youth political socialization and engagement, as well as to policymakers, youth workers and activists.

The Northwestern Miller

South African universities face major challenges in meeting the needs of their students in the area of academic language and literacy. The dominant medium of instruction in the universities is English and, to a much lesser extent, Afrikaans, but only a minority of the national population are native speakers of these languages. Nine other languages can be media of instruction in schools, which makes the transition to tertiary education difficult enough in itself for students from these schools. The focus of this book is on procedures for assessing the academic language and literacy levels and needs of students, not in order to exclude students from higher education but rather to identify those who would benefit from further development of their ability in order to undertake their degree studies successfully. The volume also aims to bring the innovative solutions designed by South African educators to a wider international audience.
