EXAM PORTAL

"This book focuses on primary education in India and interrogates what schooling means and does to children from weaker sections of Indian society and which values underpin the school system. It examines whether the concept of "education for all" is just a mechanically conceived policy target to chasing enrolment and attendance or whether it a larger social goal and a deeper political statement about the need for attacking entrenched social inequalities, and above all an affirmation of the idea that schooling has a liberating potential. Drawing on original data collected in the two states of Andhra Pradesh and West Bengal, the authors first present the multiple ways in which social class impinges on the educational system, educational processes and educational outcomes. In the second part of the book, issues around autonomy and accountability are explored via an analysis of the position of teachers within the educational hierarchy, and by looking at the various possibilities of making teachers accountable. The last part centres on the learning process, with a particular focus on the classroom. The conclusion includes recommendations that are related to the necessity for a larger debate and normative framework, which includes private schools as possible partners in the pursuing of a public good for which a public entity should take some responsibility, and in conjuncture to that, the necessity to move from government action and responsibilities to a broader concept of public action"--Provided by publisher.

This collection presents educational assessment research from Latin America, adding to a relatively small but growing body of research considering educational assessment and evaluation issues in this large region. The predominance of Chile reflects its early highly centralized education system, and the fact that it adopted national testing before other Latin American countries. It was also an early

participant in international assessment programmes. Other countries have followed the trend of implementing national testing, and to a lesser extent participating in international surveys. The complementary development of technical expertise in quantitative research methods has enabled extensive analysis of the large data sets generated by these testing and assessment programmes. Taken together, the evidence reported provides a means not only of reviewing educational quality issues in Latin America, but also of facilitating comparisons that allow the context specificity of equivalent research conducted in western developed countries to be considered. The chapters in this book were originally published as a special issue of *Assessment in Education: Principles, Policy and Practice*.
