The World Health Organization recognizes that injuries are the leading cause of death and disability to children after their first birthday. There is also high morbidity associated with injuries sustained in childhood, often affecting people for the rest of their lives. For every child who dies from injury, there are several thousand who require medical care, many who live with varying degrees of disability. Children and adolescents (0–19 years of age) are at increased risk of mortality and morbidity due to injuries such as road traffic, burns, falls, poisoning, drowning, self-harm and interpersonal violence. There are proven ways to prevent many child injuries, yet there are still gaps in our knowledge. By understanding the impact of determinants of health (i.e., the social and economic environment, the physical environment and a person's individual characteristics and behaviors), effective prevention interventions can be designed and implemented, with a high return on investment. This Special Issue covers an eclectic range of studies, the common goal of which is to reduce the global burden of child injury-related mortality and morbidity.

This volume is a collection of subject-oriented studies on paid work. Each chapter refers to the social structures that form conditions for peoples' working contexts and interprets workers' and employees' narrations on work. Work appropriation—a process of formation of subjectivity, in

which workers and employees relate to the social status of their occupations and the use-value of their work in actively dealing with the work's content and conditions—serves as a comprehensive concept for each varying subject-oriented approach in the volume. 'Work Appropriation and Social Inequality' focuses on social inequality, understood as the distribution of life chances that privilege some and discriminate others and reveals the unequal conditions for, and outcomes of, work appropriation. By analyzing work appropriation, it uses a broader concept than that of 'meaning of work' or 'meaningful work' as it includes the practice and processes of working. The volume's subject-oriented approach to work differs from the stream 'subjectivation' in going beyond individuals' desires for self-realization in work and to companies' requirements of accessing emotional and personal dimensions of their workforce. The volume contains three parts: the first lays out basic approaches to work appropriation and social inequality, the second analyses current threats to work appropriation in the UK and Germany, and the third consists of a philosophical outlook on work in the Anthropocene. The book's impact lies in pushing forward the debate on how work appropriations are linked to unequal social structures. It will therefore appeal to social scientists interested in social inequality, sociology of work and organization, as well as students and teachers at the undergraduate and graduate level in the areas of social sciences.

There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress.

Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Our human dignity can be taken from us in unjust relationships, which makes resistance and a search for dignity necessary. This search can take place in different ways – in this book through academic studies in theology, ethics and education. Human dignity relates to human rights, which are also explored here; moreover, perspectives from gender and postcolonial theory inform the studies. The reflection on human dignity ends in a discussion of education, making the book a resource in addressing contemporary value issues in education. This collection of lectures, articles and papers covers a certain time period. In the texts particular themes recur, which contributes to continuity and coherence. The focus of more recently written chapters takes the discussion in new directions. Karin Sporre, with a PhD in Ethics from Lund University, Sweden, is Professor in Education focusing on values, gender and diversity at Umeå University, Sweden. Since 2001 she has been actively engaged in co-operation with South African colleagues. This has inspired comparison between South Africa and Sweden, exemplified in some of the chapters in her book "In Search of Human Dignity".

“Til the White Day is Done is a line from the 1926 poem Dream Variations by Langston Hughes. White people are the world’s minority, yet white supremacy and racism are the scaffolding on which the American political and socioeconomic systems are built. This book was conceived by educator-

activists JLove Calderon and Marcella Runell Hall in an effort to put action steps behind anti-racist rhetoric, in a move toward being truly and unapologetically pro-liberation--for everyone. You will find love letters written by some of the leading voices on contemporary issues of race and racism; over twenty lesson plans, ranging from the social construction of race, to the racialization of social media, to the prison industrial complex. This book is meant to catapult us to action, prompt dialogue, stimulate our minds and hearts, and provide educators with profound yet practical tools for creating social justice.

Intended as a resource for psychology educators ranging from teaching assistants to experienced faculty, this book shows readers how to effectively create and manage an online psychology course. Guidelines for preparing courses, facilitating communication, and assigning grades are provided along with activities and assessments geared specifically towards psychology. Pedagogical theories and research are fused with the authors’ teaching experiences to help maximize the reader’s abilities as an online psychology instructor. The book focuses on psychology education at the undergraduate level but it also includes material appropriate for graduate students and professionals. Readers will find helpful examples from all the major content areas including introductory, social, developmental, biological, abnormal, and positive psychology, and human sexuality. Every chapter is organized around 3 sections. The Purpose part introduces the key concepts, theory, and research. The Implementation section reviews the ‘nuts and bolts’ of online teaching, and the Troubleshooting section addresses key problems and potential solutions. 'Text boxes' highlight important tips. The website

<http://www.TeachingPsychologyOnline.com> provides additional tips, links to related articles and other resources, and examples of online psychology assignments from across the discipline. The book addresses: launching your online course; enhancing student/instructor communication; modes of multimedia and how to integrate them into your course including lecture videos, podcasting, blogging, wikis, and social networking sites; creating activities for online courses; assessment and grading; and online education trend including doctoral level education. Ideal for instructors teaching ANY psychology course, from introductory to upper-level undergraduate to graduate courses, this text can be used for developing on line courses in applied areas such as counseling, health, and industrial psychology as well as for courses in social, cognitive, and developmental psychology. Instructors of any technical skill level can use this book, including those familiar with Blackboard to those who are just getting started.

Whether you are a seasoned pro or new to teaching psychology online, the tips in this book can help improve your instruction, reduce your prep time, and enhance your students’ success.

This book explores the fundamentals of multidimensional scaling (MDS) and how this analytic method can be used in applied setting for educational and psychological research. The book tries to make MDS more accessible to a wider audience in terms of the language and examples that are more relevant to educational and psychological research and less technical so that the readers are not overwhelmed by equations. The goal is for readers to learn the methods described in this book and immediately start using MDS via available software programs. The book also examines new applications that have previously not been discussed in MDS literature. It should be an ideal book for graduate students and researchers to better understand MDS. Fundamentals of Applied Multidimensional Scaling for Educational and Psychological Research is divided into three parts. Part I covers the basic and fundamental features of MDS models pertaining to applied research applications. Chapters in this section cover the essential features of data that are typically associated with MDS analysis such as preference ration or binary choice data, and also looking at metric and non-metric MDS models to build a foundation for later discussion and applications in later chapters. Part II examines specific MDS models and its applications for education and psychology. This includes spatial analysis methods that can be used in MDS to test clustering effect of items and individual differences MDS model (INDSCAL). Finally, Part III focuses on new applications of MDS analysis in these research fields. These new applications consist of profile analysis, longitudinal analysis, mean-level change, and pattern change. The book concludes with a historical review of MDS development as an analytical method and a look to future directions.

In this much needed resource, Maryellen Weimer-one of the nation's most highly regarded authorities on effective college teaching-offers a comprehensive work on the topic of learner-centered teaching in the college and university classroom. As the author explains, learner-centered teaching focuses attention on what the student is learning, how the student is learning, the conditions under which the student is learning, whether the student is retaining and applying the learning, and how current learning positions the student for future learning. To help educators accomplish the goals of learner-centered teaching, this important book presents the meaning, practice, and ramifications of the learner-centered approach, and how this approach transforms the college classroom environment. Learner-Centered Teaching shows how to tie teaching and curriculum to the process and objectives of learning rather than to the content

delivery alone.
