This moving poetry collection from the Booker Prize-winning author finds strength and hope while reflecting on the complex issues that have burdened Africa. First published in 1992, Ben Okri's remarkable debut collection features poems that are now considered classics and taught in schools and universities worldwide. Here he plays with the mystique of the African continent, countering simplistic narratives of suffering that have been imposed on it with vibrant, nuanced portraits of the traditions and resilience of African peoples. An invaluable window onto Okri's experiences as a Nigerian immigrant to the United Kingdom and as a writer discovering his calling, these poems also speak to universal truths about love, injustice, and the search for meaning.

Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the eighth-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual math tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.

This authoritative new collection contains reprints of seminal articles on the subject of auditing and its relationship to the way in which outside stakeholders monitor the activities of corporate management. Whilst the primary audience is students in upper-level undergraduate and graduate accounting courses, the book should also be of use to existing researchers, as it collects together the 'must read' articles on the subject in a readily accessible form. The articles have been selected to cover four broad topic areas: (i) the role of auditing in the governance process, (ii) audit quality and auditor reputation, (iii) governance and audit committees and (iv) the relationship between internal and external auditors. The readings show that much work has been done and that there now exists a substantial body of knowledge of how auditing can contribute to corporate governance. The volume makes an important contribution to an issue that will continue to raise challenges in the years ahead. 25 articles, dating from 1971 to 2003
