Of the approximately 20 million veterans of the U.S. armed forces, less than half utilize the Veteran's Health Administration health care system. That means the majority of veterans are receiving care from nurses and healthcare professionals who may not be trained in treating or caring for patients who have served in the military. This unique book guides nurses and healthcare professionals through the specific set of needs veterans can present, including but not limited to PTSD. Topics covered include, defining military culture and how to apply that knowledge to provide informed treatment, transitioning from service to civilian life and the many challenges expected during re-adjustment and re-entry, recognizing and treating substance use disorders, identifying suicidal behaviors and warning signs, long-term care for elderly veterans, and many more topics unique to the healthcare of veterans.

The lack of African Americans in leadership roles within the academy creates a real crisis in the leadership pipeline. One of the problems could be that the pathways to leadership for African Americans are less visible. They can see the end result but may be less clear about how to get there. Oftentimes, understanding these pathways to leadership is less academic in nature and more informal and/or relational. Thus, the relationship between leadership and mentorship for African Americans is especially important to advancing in the academy. Further guidance and understanding of steps to advancement from established African American leaders in the academy is therefore needed. *African American Leadership and Mentoring Through Purpose, Preparation, and Preceptors* provides an exhaustive exploration of leadership and mentorship through purpose, preparation, and preceptors. This edited book explains how to identify ways that individuals can strengthen their career trajectory, determine strategies to employ for career advancement, establish lasting and impactful connections with key stakeholders per career aspirations, provide guidance for individuals seeking advancement within the academy, and explore current theoretical and practical nuances with regard to research, literature, and application of leadership and mentorship of African Americans in the academy. Covering topics such as cross-racial mentorship, emotionally intelligent leadership, and African American leaders, this text is ideal for teachers, faculty,

university administrators, leaders in education, aspiring future leaders, researchers, academicians, and students.

Introduction to Social Work Jones & Bartlett Learning

"Functional scientific literacy requires an understanding of the nature of science and the skills necessary to think both scientifically and ethically about everyday issues." –from the introduction to *It's Debatable!* This book encourages scientific literacy by showing you how to teach the understanding and thinking skills your students need to explore real-world questions like these: • Should schools charge a "tax" to discourage kids from eating unhealthy foods? • Should local governments lower speed limits to reduce traffic fatalities? • Should pharmaceutical companies be allowed to advertise prescription drugs directly to consumers? At the core of the exploration is the Socioscientific Issues Framework. The framework gives students practice in the research, analysis, and argumentation necessary to grapple with difficult questions and build scientific literacy. After introducing the concept of the framework and explaining how it aligns with the Next Generation Science Standards, the book shows you how to implement it through seven units targeted to the elementary, middle, and high school levels. You even find out how to develop your own socioscientific issues curriculum. Both practical and content-rich, *It's Debatable!* doesn't shy away from controversy. Instead, the authors encourage you and your students to confront just how messy the questions raised by science (and pseudoscience) can be. After all, as the authors note, "The only way for our students to be prepared for participation in societal discourse is to have practice in their school years, and what better place than the science classroom?"

This book presents thoughtful reflections and in-depth, critical analyses of the new challenges and opportunities instructors face in teaching race during what has been called the "post-racial era". It examines the racial dimensions of the current political, economic, and cultural climate. The book features renowned scholars and experienced teachers from a range of disciplines and offers successful strategies for teaching important concepts through case studies and active learning exercises. It provides innovative strategies, novel lesson plans and classroom activities for college and university professors who seek effective methods and materials for teaching about race and racism to today's students. A valuable handbook for educators, this book should be required reading for all graduate students and college instructors.

Introduction to Rubrics Routledge

While there is consensus that institutions need to represent their educational effectiveness through documentation of student learning, the higher education community is divided between those who support national standardized tests to compare institutions' educational effectiveness, and those who believe that valid assessment of student achievement is based on assessing the work that students produce along and at the end of their educational journeys. This book espouses the latter philosophy—what Peggy Maki sees as an integrated and authentic approach to providing evidence of student learning based on the work that students produce along the chronology of their learning. She believes that assessment needs to be humanized, as opposed to standardized, to take into account the demographics of institutions, as students do not all start at the same place in their learning. Students also need the tools to assess their own progress. In addition to updating and expanding the contents of her first edition to reflect changes in assessment practices and developments over the last seven years, such as the development of technology-enabled assessment methods and the national need for institutions to demonstrate that they are using results to improve student learning, Maki focuses on ways to deepen program and institution-level assessment within the context of collective inquiry about student learning. Recognizing that assessment is not initially a linear start-up process or even necessarily sequential, and recognizing that institutions develop processes appropriate for their mission and culture, this book does not take a prescriptive or formulaic approach to building this commitment. What it does present is a framework, with examples of processes and strategies, to assist faculty, staff, administrators, and campus

leaders to develop a sustainable and shared core institutional process that deepens inquiry into what and how students learn to identify and improve patterns of weakness that inhibit learning. This book is designed to assist colleges and universities build a sustainable commitment to assessing student learning at both the institution and program levels. It provides the tools for collective inquiry among faculty, staff, administrators and students to develop evidence of students' abilities to integrate, apply and transfer learning, as well as to construct their own meaning. Each chapter also concludes with (1) an Additional Resources section that includes references to meta-sites with further resources, so users can pursue particular issues in greater depth and detail and (2) worksheets, guides, and exercises designed to build collaborative ownership of assessment. The second edition now covers: * Strategies to connect students to an institution's or a program's assessment commitment * Description of the components of a comprehensive institutional commitment that engages the institution, educators, and students--all as learners * Expanded coverage of direct and indirect assessment methods, including technology-enabled methods that engage students in the process * New case studies and campus examples covering undergraduate, graduate education, and the co-curriculum * New chapter with case studies that presents a framework for a backward designed problem-based assessment process, anchored in answering open-ended research or study questions that lead to improving pedagogy and educational practices * Integration of developments across professional, scholarly, and accrediting bodies, and disciplinary organizations * Descriptions and illustrations of assessment management systems * Additional examples, exercises, guides and worksheets that align with new content
