A leading economic historian traces the evolution of American capitalism from the colonial era to the present—and argues that we 've reached a turning point that will define the era ahead. "A monumental achievement, sure to become a classic." —Zachary D. Carter, author of *The Price of Peace* In this ambitious single-volume history of the United States, economic historian Jonathan Levy reveals how capitalism in America has evolved through four distinct ages and how the country 's economic evolution is inseparable from the nature of American life itself. The Age of Commerce spans the colonial era through the outbreak of the Civil War, and the Age of Capital traces the lasting impact of the industrial revolution. The volatility of the Age of Capital ultimately led to the Great Depression, which sparked the Age of Control, during which the government took on a more active role in the economy, and finally, in the Age of Chaos, deregulation and the growth of the finance industry created a booming economy for some but also striking inequalities

and a lack of oversight that led directly to the crash of 2008. In *Ages of American Capitalism*, Levy proves that capitalism in the United States has never been just one thing. Instead, it has morphed through the country's history—and it's likely changing again right now. "A stunning accomplishment . . . an indispensable guide to understanding American history—and what's happening in today's economy." —*Christian Science Monitor* "The best one-volume history of American capitalism." —Sven Beckert, author of *Empire of Cotton*

0471654930) Textbook: Achieving a fine balance between the concepts and procedures of calculus, this applied Calculus text provides students with the solid background they need in the subject with a thorough understanding of its applications in a wide range of fields ? from biology to economics. Key features of this innovative text include: The text is problem driven and features exceptional exercises based on real-world applications. The authors provide alternative avenues through which students can understand the material. Each topic is presented four ways: geometrically, numerically, analytically, and verbally. Students are encouraged to interpret answers and explain their reasoning throughout the book, which the author considers a unique concept compared to other books. Many of the real-world

problems are open-ended, meaning that there may be more than one approach and more than one solution, depending on the student's analysis. Solving a problem often relies on the use of common sense and critical thinking skills. Students are encouraged to develop estimating and approximating skills. The book presents the main ideas of calculus in a clear, simple manner to improve students' understanding and encourage them to read the examples. Technology is used as a tool to help students visualize the concepts and learn to think mathematically. Graphics calculators, graphing software, or computer algebra systems perfectly complement this book but the emphasis is on the calculus concepts rather than the technology. (Textbook ISBN: 0471207926) Student Solutions Manual: Provides complete solutions to every

odd exercise in the text. These solutions will help you develop the strong foundation you need to succeed in your Calculus class and allow you to finish the course with the foundation that you need to apply the calculus you learned to subsequent courses. (Solutions Manual ISBN: 0471213624) Guns, Germs, and Steel: The Fates of Human Societies (20th Anniversary Edition) W. W. Norton & Company This book teaches beginners how to create well-designed software using Java and prepares them for both the A and AB advanced placement tests in Java. Du Bois: The Negro race, like all races, is going to be saved by its exceptional men. The problem of education, then, among Negroes must first of all deal with the Talented Tenth; it is the problem of developing the Best of this race that they may guide the Mass away from the contamination and death of the Worst, in their own and other races. Now the training of men is a difficult and intricate task. Its

technique is a matter for educational experts, but its object is for the vision of seers. If we make money the object of man-training, we shall develop money-makers but not necessarily men; if we make technical skill the object of education, we may possess artisans but not, in nature, men. Men we shall have only as we make manhood the object of the work of the schools-intelligence, broad sympathy, knowledge of the world that was and is, and of the relation of men to it-this is the curriculum of that Higher Education which must underlie true life. On this foundation we may build bread winning,

skill of hand and quickness of brain, with never a fear lest the child and man mistake the means of living for the object of life.

Illustrated About The

Henry "The Gift of the
Magi" is a short story,
written by O. Henry (a
pen name for William
Sydney Porter), about a
young married couple and
how they deal with the
challenge of buying
secret Christmas gifts for
each other with very
little money. As a
sentimental story with a
moral lesson about gift-

popular one for

"twist ending" are well-
known, and the ending is
generally considered an
example of comic irony.

Sir John Chardin's
Travels in Persia is an
abridged translation of
the original French
edition, which describes

in great detail the people,
places, politics,
governments, and culture
John Chardin
encountered during his
many years of travel in
the Near East. It was
originally published in full
in 1711 under the title
Voyages de monsieur le
chevalier Chardin en
Perse, et autres lieux de
l'Orient, or The Travels
of Sir John Chardin in
Persia and the Orient. It
is considered an
authority among
academics; Persian
scholar John Emerson
said, "[Chardin's]
information on Safavid
Persia outranks that of all
other Western writers in
range, depth, accuracy,
and judiciousness." The
complete works have
never been translated in
English, though there are
many editions. This
volume contains the hard-

to-find original 1720 translation, presented in two parts. SIR JOHN CHARDIN (1643-1713), also known as Jean Chardin, was a French jeweler and traveler who authored the ten-volume book *The Travels of Sir John Chardin*, one of the most well-regarded early scholarly works on the Near East and Persia by a Westerner. Chardin was trained to be a jeweler like his father, but instead set out with a fellow merchant for Persia and India in 1664 at the ripe age of 21. He spent most of his time traveling in Persia from 1664-1673, before finally settling in England to escape the French prosecution of Protestants in 1681. It was there that he published the first part of *The Travels of Sir John Chardin* in 1686, which was presented in full in Amsterdam in 1711, two years before his death.
