Steve and Susan Zumdahl's texts focus on helping students build critical thinking skills through the process of becoming independent problem-solvers. They help students learn to think like a chemists so they can apply the problem solving process to all aspects of their lives. In CHEMISTRY: AN ATOMS FIRST APPROACH, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and bonding, to more complex materials and their properties. Because this approach differs from what most students have experienced in high school courses, it encourages them to focus on conceptual

learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with familiar material. The atoms first organization provides an opportunity for students to use the tools of critical thinkers: to ask questions, to apply rules and models and to evaluate outcomes.

Students studying chemistry often struggle with
the mole. Counting Moles provides an effective
aid to learning by giving clear and confident

presentation of the essentials of the mole
concept needed by those starting chemistry
courses. This user-friendly self-teach e-book is
split into six chapters which sequentially
introduce the 'mole calculating frame' to help
solve problems. Over 200 fully worked
examples are given along with several hundred
questions. The mole concept is applied to topics
such as relative atomic mass and relative
formula mass, percentage composition,
empirical and molecular formula. The book also
covers concentration, its units, volumetric
analysis and the relationship between volume,
mass and moles of gases. Counting Moles
culminates in you taking a Mole Driving Test.
On passing this test, you are issued with a
Counting Moles Driving License that will give
you all the confidence required to correctly
answer all mole calculations.
