This gentle introduction to discrete mathematics is written for first and second year math majors, especially those who intend to teach. The text began as a set of lecture notes for the discrete mathematics course at the University of Northern Colorado. This course serves both as an introduction to topics in

discrete math and as the "introduction to proof" course for math majors. The course is usually taught with a large amount of student inquiry, and this text is written to help facilitate this. Four main topics are covered: counting, sequences, logic, and graph theory. Along the way proofs are introduced, including proofs by contradiction, proofs by induction, and combinatorial proofs. The book contains over 360 exercises, including 230 with solutions and 130 more involved problems suitable for homework. There are also Investigate! activities throughout the text to support active, inquiry based learning. While there are many fine discrete math textbooks available, this text has the following advantages: It is written to be used in an inquiry rich course. It is written to be used in a course for future math teachers. It is open source, with low cost print editions and free electronic editions.

Writer's Choice Grade 8 Grammar Workbook McGraw-Hill/Glencoe

In the author's words: "This book is an honest attempt to understand what it means to be educated in today's world." His argument is this: No matter how important science and technology seem to industry or government or indeed to the daily life of people, as a society we believe that those educated in literature, history, and other humanities are in some way better informed, more knowing, and somehow more worthy

of the descriptor "well educated." This 19th-century conception of the educated mind weighs heavily on our notions on how we educate our young. When we focus on intellectual and scholarly issues in high school as opposed to issues, such as communications, basic psychology, or child raising, we are continuing to rely on outdated notions of the educated mind that come from elitist notions of who is to be educated and what that means. To accommodate the realities of today's world it is necessary to change these elitist notions. We need to rethink what it means to be educated and begin to focus on a new conception of the very idea of education. Students need to learn how to think, not how to accomplish tasks, such as passing standardized tests and reciting rote facts. In this engaging book, Roger C. Schank sets forth the premises of his argument, cites its foundations in the Great Books themselves, and illustrates it with examples from an experimental curriculum that has been used in graduate schools and with K-12 students. Making Minds Less Well Educated Than Our Own is essential reading for scholars and students in the learning sciences, instructional design, curriculum theory and planning, educational policy, school reform, philosophy of education, higher education, and anyone interested in what it means to be educated in today's world.
