This is the first academic book to examine the long running hit series Grand Designs, which occupies a significant place in the popular imagination internationally. The authors apply an empirically grounded, critical perspective to the study of television to reveal how people use the program in their everyday lives. The emphasis on everyday uses and meanings combines creatively with understanding the program theoretically, textually and in terms of its production structures. This position challenges framings of the popular lifestyle and factual television genre that has been dominated by a neoliberal or governmentality perspective for many years. Presented by British

designer and writer, Kevin McCloud, Grand Designs follows the progress of home owners as they embark on design, renovation and building projects at almost always dizzying scales of endeavour. Understanding the program as both a text to analyse and a site of material impact, the book draws on interviews with production members, home renovators, building practitioners and audiences, as well as references to associated media formats to provide contextual depth to the analysis. The authors argue that, as a cultural object, the program is both shaped by and enacts social discourses of home-making, design value and taste. Navigating public, commercial and promotional logics, Grand Designs sparks new forms of cultural production and consumer markets.

A Field Guide to Ecological, Affordable Community Building CRC Press  
The Rough Guide to Norfolk & Suffolk focuses on one of the UK's most popular regions. In full colour throughout, with dozens of gorgeous photos, it will inspire you to explore this diverse and beautiful area. Lively, entertaining accounts in Rough Guides' signature honest, forthright style cover attractions from the unique wildlife of the Norfolk Broads to stunning coastal resorts and stately homes, art galleries and churches - Norfolk has the densest concentration of medieval churches in the world. Jerry Alten started as Art Director of TV Guide in 1967, and for almost 50 years he engaged the world's greatest illustrators to provide the artwork for the pages of the widest circulated magazine in the world. Unlike entertainment magazines today, the digest-sized magazine relied almost solely on illustration, and in many cases, it

helped to support the careers of many of the illustrators. Jerry Alten provides a view behind-the-scenes of a magazine that featured some of America's greatest celebrities, the artist who painted them, and the interesting, highly entertaining, and sometimes outrageous interactions between subject, artist, and art director.

This book is the inspirational story of one project that shows you how you can become involved in building and running your neighbourhood. The author, co-founder of Lilac (Low Impact Living Affordable Community), along with other members of the community and the project team, explains how a group of people got together to build one of the most pioneering ecological, affordable cohousing neighbourhoods in the world. The book is a story of perseverance, vision and passion, demonstrating how ordinary people can build their own affordable, ecological community. The book starts with the clear values that motivated and guided the project's members: sustainability, co-operativism, equality, social justice and self-management. It outlines how they were driven by challenges and concerns over the need to respond to climate change and energy scarcity, the limits of the 'business as usual' model of pro-growth economics, and the need to develop resources so that communities can determine and manage their own land and resources. The author's story is interspersed with vignettes on topics such as decision making, landscaping, finance and design. The book summarises academic debates on the key issues that informed the project, and gives technical data on energy and land issues as well as practical 'how-to' guides on a range of issues such as designing meetings, budget planning and community agreements. Low Impact Living provides clear and easy to follow advice for community groups, practitioners, government, business and the development sector and is heavily illustrated with drawings and photographs from the architectural team.

If you've ever dreamt of designing and building your own home, this book is for you. Becoming a 'self-builder' doesn't necessarily mean learning to build a house physically from scratch. Anyone can be a self-builder – you can do so without ever having to lay a brick yourself. Self-built homes can also be more individual, better designed and more economical than buying from a developer. This book is designed for homeowners and self-builders, whether aspiring or on the brink of starting a

project. It provides a jargon-free, step-by-step guide to the process of designing and building your own home, distilling all of the practical information needed to make your dream house a reality. Carefully crafted to offer friendly, easy-to-understand practical guidance and packed with watch points, hints and tips, it also highlights the potential pitfalls and suggests ways of avoiding them. Including indications of costs and timescales, Self-build demystifies the process of budgeting, finding a site, gaining planning permission, designing your home and all of the surrounding issues to do with sustainability, planning, regulations, procurement and the use of building contracts. Beautifully illustrated with over 230-colour photos, diagrams and plans, it provides all the inspiration and ideas you need to bring your own project to life. Featured houses include:

Amphibious House by Baca Architects Corten Courtyard House by Barefoot Architects Haringey Brick House by Satish Jassal Architects Shawm House by Mawson Kerr Architects Sussex House by Wilkinson King Architects The Pocket House by Tikari Works Architects.

This book combines extracts from major cases and secondary materials with critical commentary to provide a complete resource for undergraduate and postgraduate students of intellectual property law. All areas of intellectual property law in the UK are covered: copyright, trademarks and passing off, confidential information, industrial designs, patent, procedure and enforcement. This book also tackles topical areas, such as the application of intellectual property law to new technologies and character merchandising. While the focus of the book is on intellectual property law in a domestic context, it provides international, EU and comparative law perspectives on major issues. It also addresses the wider policy implications of legislative and judicial developments in the area.

IT projects emerge from a business need. In practice, software developers must accomplish two big things before an IT project can begin: find out what you need to do (i.e., analyse business requirements) and plan out how to do it (i.e., project management). The biggest problem in IT projects is

delivering the wrong product because IT people do not understand what business people require. This practical textbook teaches computer science students how to manage and deliver IT projects by linking business and IT requirements with project management in an incremental and straightforward approach. Business Analysis, Requirements, and Project Management: A Guide for Computing Students presents an approach to analysis management that scales the business perspective. It takes a business process view of a business proposal as a model and explains how to structure a technical problem into a recognisable pattern with problem frames. It shows how to identify core transactions and model them as use cases to create a requirements table useful to designers and coders. Linked to the analysis are three management tools: the product breakdown structure (PBS), the Gantt chart, and the Kanban board. The PBS is derived in part from the problem frame. The Gantt chart emerges from the PBS and ensures the key requirements are addressed by reference to use cases. The Kanban board is especially useful in Task Driven Development, which the text covers. This textbook consists of two interleaving parts and features a single case study. Part one addresses the business and requirements perspective. The second integrates core project management approaches and explains how both requirements and management are connected. The remainder of the book is appendices, the first of which provides solutions to the exercises presented in each chapter. The second appendix puts together much of the documentation for the case study into one place. The case study presents a real-word business scenario to expose students to professional practice.
