For over a century, movies have played an important role in our lives, entertaining us, often provoking conversation and debate. Now, with the rise of digital cinema, audiences often encounter movies outside the theater and even outside the home.

Traditional distribution models are challenged by new media entrepreneurs and independent film makers, usergenerated video, film blogs, mashups, downloads, and other expanding networks.

Reinventing Cinema examines film culture at the turn of this century, at the precise moment when digital media are altering our historical relationship with the movies.

Spanning multiple disciplines, Chuck Tryon addresses the interaction between production,

distribution, and reception of films, television, and other new and emerging media. Through close readings of trade publications, DVD extras, public lectures by new media leaders, movie blogs, and YouTube videos, Tryon navigates the shift to digital cinema and examines how it is altering film and popular culture. A respected resource for decades, the Guide for the Care and Use of Laboratory Animals has been updated by a committee of experts, taking into consideration input from the scientific and laboratory animal communities and the public at large. The Guide incorporates new scientific information on common laboratory animals, including aquatic species, and includes extensive references.

It is organized around major components of animal use: Key concepts of animal care and use. The Guide sets the framework for the humane care and use of laboratory animals. Animal care and use program. The Guide discusses the concept of a broad Program of Animal Care and Use, including roles and responsibilities of the Institutional Official, Attending Veterinarian and the Institutional Animal Care and Use Committee. Animal environment, husbandry, and management. A chapter on this topic is now divided into sections on terrestrial and aquatic animals and provides recommendations for housing and environment,

husbandry, behavioral and population management, and more. Veterinary care. The Guide discusses veterinary care and the responsibilities of the Attending Veterinarian. It includes recommendations on animal procurement and transportation, preventive medicine (including animal biosecurity), and clinical care and management. The Guide addresses distress and pain recognition and relief, and issues surrounding euthanasia. Physical plant. and noise control, and environmental monitoring; and specialized facilities for animal housing and research needs. The Guide for the Care and Use of Laboratory Animals provides a framework for the judgments required in the management of animal facilities. This updated and expanded resource of proven value will be important to scientists and researchers, veterinarians, animal care personnel, facilities managers, institutional administrators, policy makers involved in research issues, and animal welfare advocates.

PublishAmerica Fracking, the practice of shattering underground rock to release oil and natural gas, is a major driver of climate change. The 300,000 fracking facilities in the US also directly harm the health and livelihoods of people in front-line communities, who are disproportionately poor and people of color. Impacted citizens have for years protested that their rights have been ignored. On May 14, 2018, a respected

international human-rights court, the Rome-based Permanent Peoples' Tribunal, began a week-long hearing on the impacts of fracking and climate change on human and Earth rights. In its advisory opinion, the Tribunal ruled that fracking systematically violates substantive and procedural human rights; that governments are complicit in the rights violations; and that to protect human rights and the climate, the practice of fracking should be banned. The case makes

history. It revokes the social license of extreme-extraction industries by connecting environmental destruction to human-rights violations. It affirms that climate change, and the extraction techniques that fuel it, directly violate deeply and broadly accepted moral norms encoded in the Universal Declaration of Human Rights. Bearing Witness maps a promising new direction in the ongoing struggle to protect the planet from climate chaos. It

tells the story of this landmark case through carefully curated court materials, including searing eye-witness testimony, groundbreaking legal testimony, and the Tribunal's advisory opinion. Essays by leading climate writers such as Winona LaDuke, Robin Wall Kimmerer, and Sandra Steingraber and legal experts such as John Knox, Mary Wood, and Anna Grear give context to the controversy. Framing essays by the editors, experts on climate ethics

demonstrate that a human-rights focus is a powerful, transformative new tool to address the climate crisis. Guide for the Care and Use of Laboratory Animals National Academies Press Most of the essays appeared in the spring 1969 issue of *Dædalus*. [Prenatal Care](#) Createspace Independent Publishing Platform The uniquely prominent role of French intellectuals in European cultural and political life following World War II is the focus of Tony Judt's newest book. He analyzes this intellectual community's most

divisive conflicts: how to respond to the promise and the betrayal of Communism and how to sustain a commitment to radical ideals when confronting the hypocrisy in Stalin's Soviet Union, in the new Eastern European Communist states, and in France itself. Judt shows why this was an all-consuming moral dilemma to a generation of French men and women, how their responses were conditioned by war and occupation, and how post-war political choices have come to sit uneasily on the conscience of later generations of French intellectuals. Judt's analysis extends beyond the writings of fashionable "Existentialist"

personalities such as Jean-Paul Sartre, Albert Camus, and Simone de Beauvoir to include a wide intellectual community of Catholic philosophers, non-aligned journalists, literary critics and poets, Communist and non-Communist alike. Judt treats the intellectual dilemmas of the postwar years as an unfinished history. French intellectuals have not fully come to terms with the gnawing sense of what Judt calls the "moral irresponsibility" of those years. The result, he suggests, is a legacy of bad faith and confusion that has damaged France's cultural standing, notably in newly liberated Eastern Europe, and which reflects the nation's

larger difficulty in confronting its own ambivalent past. *Short Fictions and Wonders* National Academies Press
