This book by Tui Rose, R.N., is endorsed by Dr. John Trowbridge, a Texas Environmental Toxicologist. Love or loathe gardening, these 1001 green-thumbs-up safe secrets, tips, tricks and tonics refreshingly motivate, making the task fun, fast, interesting and easy to do. Importantly, they also save precious health, money, time and energy. These tips are especially vital to health conscious individuals, parents, new brides, expecting parents, growing children, the unborn fetus, and pet care owners. Only natural alternatives and simple solutions are provided, using mostly ingredients already found in your food pantry or laundry for safety. Other tips include an entire chapter on homemade recipes and remedies for non-toxic pest control, success with seeds, seedlings, bulbs, cuttings, compost, mulch, fertilizers, novel scarecrows, and raised garden beds for easy no-stoop gardening. Discover tips on caring for tools, hoses, lawns, weeds, trees, enticing birds, maintaining indoor potted plants, watering while on holiday, keeping cut flowers blooming longer, making potpourri, preserving autumn leaves, how to use Diatomaceous Earth, a natural gift from Mother Nature for a multitude of beneficial uses, and much, more... Knowledge of alarming risks from toxic chemicals provided in an entire chapter of this book helps prevent birth defects, still birth, childhood and adult chronic diseases, e.g., ADD, Autism, Asthma, Cancer, Parkinson's, Multiple Sclerosis, learning deficits, poor memory and a whole host of other ailments, which can surface 10 to 30 years after exposure by breathing, ingestion, or absorption through the skin. Shockingly doctors in Canada warn after research that genetics, i.e., DNA interference by toxins used in the garden can appear in the next generation as mental and physical defects, disabilities, disease and more. An entire Resource Directory Chapter with contact information is dedicated to helping those wishing to find safer, non-toxic ready-made gardening and home alternatives. A wonderful gift for Mother's or Father's Day, Christmas, birthdays, bridal registry, PTA groups, organic gardener networks and pet owners. About the Author Author, Tui Rose, began listening to handy hints on the radio in New Zealand since the age of 10, before the family on a dairy farm got TV. As a married woman, she and her husband were avid gardeners and landscapers. Neighbors and weekend drivers would drive slowly by and even stop to admire and photograph their garden scene, a little paradise. Tui was tragically widowed in her early 30's and left to raise two young children as a single mother. She worked as a registered nurse, having broad experience for over 35 years. Tui is widely travelled, having been accepted for the prestigious position of private nurse for Lady Winston Churchill in London from 1972 to 1973. When Tui, sustained a spinal cord injury requiring surgeries 15 years ago, she could no longer work in her trained capacity, so turned her attention to prevention by drawing upon her medical knowledge and experience to research non-toxic alternatives in her goal to provide a series of books for her upcoming "Wholesome Living Collection." Preventing illness and disease, and making life easy, safe, natural and thrifty is her prime focus. Tui is also author of an Amazon 5-star book and multiple times publisher's best monthly seller titled: "Going Green Using Diatomaceous Earth How-To Tips." She is the first author in the world to write a consumer book on this subject, a companion book to natural, non-toxic gardening.

- New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “ At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope. ” —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming “ There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom. ” —David Roberts, Vox “ This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook. ” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions

exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

This consumer guide is filled with more than 800 listings of green retailers, service providers, and organizations throughout Los Angeles. The businesses are divided into categories and have a minimum green requirement. Some the categories are further recognized with a "green leaf" award, which gauges green businesses on a scale of one to four leaves, four being the greenest. The award is based on a measure of a business's sale or use of green products and services. At the beginning of each category, the evaluation criteria is provided. Among the listings are everything from organic restaurants and grocery stores to dry cleaners, organic pest control services, and sustainable building suppliers, landscapers, and interior designers.

US cities are faced with the joint challenge of our climate crisis and the lack of housing that is affordable and healthy. Our housing stock contributes significantly to the changing climate, with residential buildings accounting for 20 percent of greenhouse gas emissions. US housing is not only unhealthy for the planet, it is putting the physical and financial health of residents at risk. Our housing system means that a renter working 40 hours a week and earning minimum wage cannot afford a two-bedroom apartment in any US county. In Gray to Green Communities, green affordable housing expert Dana Bourland argues that we need to move away from a gray housing model to a green model, which considers the health and well-being of residents, their communities, and the planet. She demonstrates that we do not have to choose between protecting our planet and providing housing affordable to all. Bourland draws from her experience leading the Green Communities Program at Enterprise Community Partners, a national community development intermediary. Her work resulted in the first standard for green affordable housing which was designed to deliver measurable health, economic, and environmental benefits. The book opens with the potential of green affordable housing, followed by the problems that it is helping to solve, challenges in the approach that need to be overcome, and recommendations for the future of green affordable housing. Gray to Green Communities brings together the stories of those who benefit from living in green affordable housing and examples of Green Communities' developments from across the country. Bourland posits that over the next decade we can deliver on the human right to housing while reaching a level of carbon emissions reductions agreed upon by scientists and demanded by youth. Gray to Green Communities will empower and inspire anyone interested in the future of housing and our planet.

#1 NEW YORK TIMES BEST SELLER • In this urgent, authoritative book, Bill Gates sets out a wide-ranging, practical—and accessible—plan for how the world can get to zero greenhouse gas emissions in time to avoid a climate catastrophe. Bill Gates has spent a decade investigating the causes and effects of climate change. With the help of experts in the fields of physics, chemistry, biology, engineering, political science, and finance, he has focused on what must be done in order to stop the planet's slide to certain environmental disaster. In this book, he not only explains why we need to work toward net-zero emissions of greenhouse gases, but also details what we need to do to achieve this profoundly important goal. He gives us a clear-eyed description of the challenges we face. Drawing on his understanding of innovation and what it takes to get new ideas into the market, he describes the areas in which technology is already helping to reduce emissions, where and how the current technology can be made to function more effectively, where breakthrough technologies are needed, and who is working on these essential innovations. Finally, he lays out a concrete, practical plan for achieving the goal of zero emissions—suggesting not only policies that governments should adopt, but what we as individuals can do to keep our government, our employers, and ourselves accountable in this crucial enterprise. As Bill Gates makes clear, achieving zero emissions will not be simple or easy to do, but if we follow the plan he sets out here, it is a goal firmly within our reach.

Usefull Guide to Energy Efficiency at HomeYou might have heard the phrase "living off the grid" used for some time now but don't have an idea of what it really means. Living off the grid means providing and relying on your own resources, rather than those of the community. It means you have the willingness to sacrifice material objects in order to achieve something for yourself. For example, spending money to earn more money. Since you are providing for yourself, it means you are not affected by anything going on around you, economically speaking, and you have no use for an excess of funds. If for miles around you there is a power outage, but you have your own source, you may not even know about it because it does not affect your home. To live off the grid means not having to worry about how the economy turns or what the crime rate is in your area.Here is what you will learn after reading this book: Why you should consider off the grid Power your home How to make a steady income What off the grid living is truly like What to do about health care and insurance Getting Your FREE BonusRead this book, and find "BONUS: Your FREE Gift" chapter right after the introduction or after the conclusion.
