The Writer ' s Workshop takes an approach to teaching writing that is

new only because it is so old. Today, rhetoric and composition typically proceed by ignoring what was done for 2,500 years in Western education. Gregory Roper, on the other hand, helps students learn to write in the way the great writers of the past themselves learned: by carefully imitating masters of the craft, including Cicero, Thomas Aquinas, Charles Dickens, Sojourner Truth, James Joyce, and Ernest Hemingway. By living in their workshops and apprenticing to these and other masters, apprentice writers—like apprentice musicians, painters, and blacksmiths of the past—will rapidly improve the complexity of their art and discover their own native voices. Interspersed into chapters full of sound practical advice and challenging assignments are reflections on Great Ideas from “ Realism and Impressionism ” to “ Nominalism and Modern Science. ” Perfect for the college or even high school writing classroom—as well as a marvelous book for homeschoolers and others who would like to improve their own writing—The Writer ' s Workshop is a fine practical guide, and Dr. Roper a friendly yet demanding teacher-mentor.

This second volume discusses state-of-the-art applications of equivalent-circuit models as they pertain to solving problems in battery management and control. Readers are provided information on how to use models from Volume I to control battery packs, along with discussion of fundamental flaws in current approaches. In addition, Volume II introduces the ideas of physics-based optimal battery controls and explains why they can be superior to the state-of-the-art equivalent-circuit controls.

An Eclipse of Moths extends Gregory Crewdson's obsessive exploration of the small-town, postindustrial American landscape. Each of these sixteen, never-before-published images is composed at a cinematic scale with the artist's signature auteurial care. Downed streetlights, abandoned baby carriages, and decommissioned carnival rides set the scene for a cast of classic Crewdsonian characters--full of equal parts yearning and ennui. This collection of images is offered in a limited-edition, slipcased volume, sumptuously produced at a scale that offers an immersive experience of each of these carefully crafted scenes.

The astonishing, uplifting story of a real-life Indiana Jones and his humanitarian campaign to use education to combat terrorism in the Taliban's backyard Anyone who despairs of the individual's power to change lives has to read the story of Greg Mortenson, a homeless mountaineer who, following a 1993 climb of Pakistan's treacherous K2, was inspired by a chance encounter with impoverished mountain villagers and promised to build them a school. Over the next decade he built fifty-five

schools—especially for girls—that offer a balanced education in one of the most isolated and dangerous regions on earth. As it chronicles Mortenson's quest, which has brought him into conflict with both enraged Islamists and uncomprehending Americans, *Three Cups of Tea* combines adventure with a celebration of the humanitarian spirit.

Gregory's Classical Mechanics is a major new textbook for undergraduates in mathematics and physics. It is a thorough, self-contained and highly readable account of a subject many students find difficult. The author's clear and systematic style promotes a good understanding of the subject: each concept is motivated and illustrated by worked examples, while problem sets provide plenty of practice for understanding and technique. Computer assisted problems, some suitable for projects, are also included. The book is structured to make learning the subject easy; there is a natural progression from core topics to more advanced ones and hard topics are treated with particular care. A theme of the book is the importance of conservation principles. These appear first in vectorial mechanics where they

---

are proved and applied to problem solving. They reappear in analytical mechanics, where they are shown to be related to symmetries of the Lagrangian, culminating in Noether's theorem.

As today's cars continue to become more complicated and complex, the cost to repair them has continued to climb. However, with some basic knowledge and a little know-how, many of the most expensive repairs can be avoided by simple, regular maintenance, or relatively inexpensive repairs that can be done with a few tools and step-by-step instructions. Car expert, Dave Stribling, has seen every repair in the book, and in *Idiot's Guides: Auto Repair and Maintenance*, he arms readers with the knowledge they'll need to troubleshoot and diagnose common problems and make simple repairs that are universal to most makes and

models. Dozens of step-by-step, full-color photos and illustrations make DIY car repairs and maintenance so much easier. When the repair calls for an expert the time comes to take the car to the shop, Dave arms readers with the knowledge they'll need to make the right choices, to avoid unnecessary repairs, and to minimize the possibility of getting ripped off.

Dr. Greg Zacharias, former Chief Scientist of the United States Air Force (2015-18), explores next steps in autonomous systems (AS) development, fielding, and training. Rapid advances in AS development and artificial intelligence (AI) research will change how we think about machines, whether they are individual vehicle platforms or networked enterprises. The payoff will be considerable, affording the US military significant protection for aviators, greater effectiveness in employment, and unlimited opportunities for novel and disruptive concepts of operations. *Autonomous Horizons: The Way Forward* identifies issues and makes recommendations for the Air Force to take full advantage of this transformational technology.
