“In a time in which the ways we communicate and connect are constantly changing, and not always for the better, Sherry Turkle provides a much needed voice of caution and reason to help explain what the f\*\*\* is going on.” —Aziz Ansari, author of *Modern Romance* Renowned media scholar Sherry Turkle investigates how a flight from conversation undermines our relationships, creativity, and productivity—and why reclaiming face-to-face conversation can help us regain lost ground. We live in a technological universe in which we are always communicating. And yet we have sacrificed conversation for mere connection. Preeminent author and researcher Sherry Turkle has been studying digital culture for over thirty years. Long

an enthusiast for its possibilities, here she investigates a troubling consequence: at work, at home, in politics, and in love, we find ways around conversation, tempted by the possibilities of a text or an email in which we don’t have to look, listen, or reveal ourselves. We develop a taste for what mere connection offers. The dinner table falls silent as children compete with phones for their parents’ attention. Friends learn strategies to keep conversations going when only a few people are looking up from their phones. At work, we retreat to our screens although it is conversation at the water cooler that increases not only productivity but commitment to work. Online, we only want to share opinions that our followers will agree with – a politics that shies away from the real conflicts and solutions of the public square. The case for conversation begins with the necessary conversations of solitude and self-reflection. They are endangered: these days, always connected, we see loneliness as a problem that technology should solve. Afraid of being alone, we rely on other people to give us a sense of ourselves, and our capacity for empathy and relationship suffers. We see the costs of the flight from conversation everywhere: conversation is the cornerstone for democracy and in business it is good for the bottom line. In the private sphere, it builds empathy, friendship, love, learning, and productivity. But there is good news: we are resilient. Conversation cures. Based on five years of research and interviews in homes, schools, and the workplace, Turkle argues that we have come to a better understanding of where our technology can and

---

cannot take us and that the time is right to reclaim conversation. The most human—and humanizing—thing that we do. The virtues of person-to-person conversation are timeless, and our most basic technology, talk, responds to our modern challenges. We have everything we need to start, we have each other. Turkle's latest book, *The Empathy Diaries* (3/2/21) is available now.

*From Stupefied Youth to Dangerous Adults* Back in 2008, Mark Bauerlein was a voice crying in the wilderness. As experts greeted the new generation of “ Digital Natives ” with extravagant hopes for their high-tech future, he pegged them as the “ Dumbest Generation. ” Today, their future doesn't look so bright, and their present is pretty grim. The twenty-somethings who spent their childhoods staring into a screen are lonely and purposeless, unfulfilled at work and at home. Many of them are even suicidal. *The Dumbest Generation Grows Up* is an urgently needed update on the Millennials, explaining their not-so-quiet desperation and, more important, the threat that their ignorance poses to the rest of us. Lacking skills, knowledge, religion, and a cultural frame of reference, Millennials are anxiously looking for something to fill the void. Their mentors have failed them. Unfortunately, they have turned to politics to plug the hole in their souls. Knowing nothing about history, they are convinced that it is merely a catalogue of oppression, inequality, and hatred. Why, they wonder, has the human race not ended all this injustice before now? And from the depths of their ignorance rises the answer: Because they are the first ones to care! All that is needed is to tear down our inherited civilization and replace it with their utopian aspirations. For a generation unacquainted with the constraints of human nature,

anything seems possible. Having diagnosed the malady before most people realized the patient was sick, Mark Bauerlein surveys the psychological and social wreckage and warns that we cannot afford to do this to another generation.

Thanks to Facebook and Instagram, our younger selves have been captured and preserved online. But what happens, Kate Eichhorn asks, when we can't leave our most embarrassing moments behind? Rather than a childhood cut short by a loss of innocence, the real crisis of the digital age may be the specter of a childhood that can never be forgotten.

Blockchain technology is powering our future. As the technology behind cryptocurrencies like bitcoin and Facebook's Libra, open software platforms like Ethereum, and disruptive companies like Ripple, it's too important to ignore. In this revelatory book, Don Tapscott, the bestselling author of *Wikinomics*, and his son, blockchain expert Alex Tapscott, bring us a brilliantly researched, highly readable, and essential book about the technology driving the future of the economy. Blockchain is the ingeniously simple, revolutionary protocol that allows transactions to be simultaneously anonymous and secure by maintaining a tamperproof public ledger of value. Though it's best known as the technology that drives bitcoin and other digital currencies, it also has the potential to go far beyond currency, to record virtually everything of value to humankind, from birth and death certificates to insurance claims, land titles, and even votes. Blockchain is also essential to understand if you're an artist who wants to make a living off your art, a

consumer who wants to know where that hamburger meat really came from, an immigrant who's tired of paying big fees to send money home to your loved ones, or an entrepreneur looking for a new platform to build a business. And those examples are barely the tip of the iceberg. As with major paradigm shifts that preceded it, blockchain technology will create winners and losers. This book shines a light on where it can lead us in the next decade and beyond.

The central purpose of this collection of essays is to make a creative addition to the debates surrounding the cultural heritage domain. In the 21st century the world faces epochal changes which affect every part of society, including the arenas in which cultural heritage is made, held, collected, curated, exhibited, or simply exists. The book is about these changes; about the decentring of culture and cultural heritage away from institutional structures towards the individual; about the questions which the advent of digital technologies is demanding that we ask and answer in relation to how we understand, collect and make available Europe's cultural heritage. Cultural heritage has enormous potential in terms of its contribution to improving the quality of life for people, understanding the past, assisting territorial cohesion, driving economic growth, opening up employment opportunities and

---

supporting wider developments such as improvements in education and in artistic careers. Given that spectrum of possible benefits to society, the range of studies that follow here are intended to be a resource and stimulus to help inform not just professionals in the sector but all those with an interest in cultural heritage.

*Growing Up with Technology* explores the role of technology in the everyday lives of three- and four-year-old children, presenting the implications for the children's continuing learning and development.

Children are growing up in a world where the internet, mobile phones and other forms of digital interaction are features of daily life. The authors have carefully observed children's experiences at home and analysed the perspectives of parents, practitioners and the children themselves. This has enabled them to provide a nuanced account of the different ways in which technology can support or inhibit learning. Drawing on evidence from their research, the authors bring a fresh approach to these debates, based on establishing relationships with children, families and educators to get insights into practices, values and attitudes. A number of key questions are considered, including: Which technologies do young children encounter at home and preschool? What kind

of learning takes place in these encounters? How can parents and practitioners support this learning? Are some children disadvantaged when it comes to learning with technology?

*Growing Up with Technology* is strongly grounded in a series of research projects, providing new ways of thinking about how children's learning with technology can be supported. It will be of great interest to undergraduate and postgraduate students on a range of courses including childhood studies, and those with a particular interest in the use of technology in education. Parents, practitioners and researchers will also find this a fascinating and informative read.

"An excellent primer on what it means to live digitally. It should be required reading for adults trying to understand the next generation." -- Nicholas Negroponte, author of *Being Digital*

The first generation of children who were born into and raised in the digital world are coming of age and reshaping the world in their image. Our economy, our politics, our culture, and even the shape of our family life are being transformed. But who are these wired young people? And what is the world they're creating going to look like? In this revised and updated edition, leading Internet and technology

experts John Palfrey and Urs Gasser offer a cutting-edge sociological portrait of these young people, who can seem, even to those merely a generation older, both extraordinarily sophisticated and strangely narrow. Exploring a broad range of issues -- privacy concerns, the psychological effects of information overload, and larger ethical issues raised by the fact that young people's social interactions, friendships, and civic activities are now mediated by digital technologies -- *Born Digital* is essential reading for parents, teachers, and the myriad of confused adults who want to understand the digital present and shape the digital future.

'Loveday's case is that the mantle of historical truth and divine authority has placed upon the Bible an intolerable weight, crushing it as a creative work of immense imaginative and inspirational power. His argument is both fascinating and persuasive.' Matthew Parris *The Bible for Grown-Ups* neither requires, nor rejects, belief. It sets out to help intelligent adults make sense of the Bible - a book that is too large to swallow whole, yet too important in our history and culture to spit out. Why do the creation stories in Genesis contradict each other? Did the Exodus really happen? Was King David a historical figure? Why is Matthew's account of the birth of Jesus so different from Luke's?

Why was St Paul so rude about St Peter? Every Biblical author wrote for their own time, and their own audience. In short, nothing in the Bible is quite what it seems. Literary critic Simon Loveday's book - a labour of love that has taken over a decade to write - is a thrilling read, for Christians and anyone else, which will overturn everything you thought you knew about the Good Book.

forcing firms to rethink their fundamental values. We are in an extraordinary age where businesses must make themselves clearly visible to shareholders, customers, employees, partners, and society. Financial data, employee grievances, internal memos, environmental disasters, product weaknesses, international protests, scandals and policies, good news and bad; all can be seen by anyone who knows where to look. Don Tapscott, bestselling author and one of the most sought after strategists and speakers in the business world, is famous for seeing into the future and pointing out both its forest and its trees. David Ticoll, visionary researcher, columnist, and consultant, has identified countless breakthrough trends at the intersection of technology and business strategy. These two longtime collaborators now offer a brilliant guide to the new age of openness. In *The Naked Corporation*, they explain how the new transparency has caused a power shift toward customers, employees, shareholders, and other stakeholders; how and where information has exploded; and how corporations across many industries have seized on transparency not as a challenge but as an opportunity. Drawing on such examples as Shell Oil's reinvention of itself as an environmentally focused business, to Johnson & Johnson's longstanding and carefully nurtured reputation as a company worthy of trust—as well as little-known examples from pharmaceuticals, insurance, high technology, and financial services—Tapscott and Ticoll offer invaluable advice on how to lead the new age, rather than simply react to it. *The Naked Corporation* is a book for managers, employees, investors, customers, and anyone who cares about the future of the corporation and society.

As seen in *Time*, *USA TODAY*, *The Atlantic*, *The Wall Street Journal*, and on *CBS This Morning*, *BBC*, *PBS*, *CNN*, and *NPR*, iGen is crucial reading to understand how the children, teens, and young adults born in the mid-1990s and later are vastly different from their Millennial predecessors, and from any other generation. With generational divides wider than ever, parents, educators, and employers have an urgent need to understand today's rising generation of teens and young adults. Born in the mid-1990s up to the mid-2000s, iGen is the first generation to spend their entire adolescence in the age of the smartphone. With social media and texting replacing other activities, iGen spends less time with their friends in person—perhaps contributing to their unprecedented levels of anxiety, depression, and loneliness. But technology is not the only thing that makes iGen distinct from every generation before them; they are also different in how they spend their time, how they behave, and in their attitudes toward religion, sexuality, and politics. They socialize in completely new ways, reject once sacred social taboos, and want different things from their lives and careers. More than previous generations, they are obsessed with safety, focused on tolerance, and have no patience for inequality. With the first

members of iGen just graduating from college, we all need to understand them: friends and family need to look out for them; businesses must figure out how to recruit them and sell to them; colleges and universities must know how to educate and guide them. And members of iGen also need to understand themselves as they communicate with their elders and explain their views to their older peers. Because where iGen goes, so goes our nation—and the world.
