Tooling across the American southwest in their giant Winnebago, Max and his nephew, Owen, seem harmless enough, the actorly old fellow spouting Shakespeare like a faucet while his young charge trots him through select tourist destinations along the road. But appearances, as you might imagine, can be deceiving. Old Max is actually a master thief, and young Owen's summer vacation is his careful apprenticeship in a life of crime. Pulling heists is scary enough, but ominous signs point to the alarming fact that The Subtractors are on their tail, criminal bogeymen who stop at nothing to steal from other thieves. The road trip soon turns into a chase, by turns comic and horrifying. The most disturbing twist: Owen's slow realization that the person he loves most in the world is the one who can do him the most harm.

Boko Haram analyzes the activities and atrocities of Nigeria's Jihadi terrorist group, Boko Haram, in the context of global religious fundamentalism and extremism. The book traces the early beginnings of the religious sect, the conversion of its leader to radical Islam in 2002, and the group's campaign of violence beginning in 2009 and continuing to the present. The group's attacks against a variety of targets are examined in detail as are their general tactics and strategies. The Nigerian government response is also examined in order to provide critical lessons to counterterrorism planners, policy and government officials, and scholars. The automobile sector is one of the most archetypal global industries and is seen by many as one of the main drivers behind the homogenisation of world markets due to firms' internationalization strategies and the social practices that firms impose. This book argues that this is not entirely the case due to the heterogeneity of firms and the diversity of strategies pursued. It highlights the diversity and forms of internationalization and the preference for regionalization rather than globalization that has occurred over the past decade. This book looks specifically at the

American and Asian car industry.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardized up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Luke 15:7 tells us that the whole heaven rejoices when one soul is won. It is the work of the shepherd to care for the souls of the Lord. They are tasked to watch over them, discipline them, teach them, guide them, etc. For this reason, shepherds are the heart beat of the Lord. The Lord Jesus Christ Himself is called the "Good Shepherd". To shepherd a soul is the greatest work and greatest miracle here on earth and those who do it faithfully will have a great reward. The salvation of a soul is precious in the sight of God and is the only event that is able to move the entire heavenly host to rejoice and celebrate the blood and the done work of the cross. Most importantly, shepherds must follow the Chief Shepherd-Jesus Christ-to lay down their lives. They must first follow Him and then teach the congregation to follow as well, according to the will of God. This text aims to present and discuss the innovative Volvo Uddevalla plant, comparing it to other plants - Japanese lean ones and others. The starting point for the book is Volvo's dramatic decision to close its Uddevalla and Kalmar plants, and the debate that followed this decision, both in Sweden and abroad. Both plants were pioneers of the possibilities to unite productivity and the good work, but, following the announcement of their closure, researchers and practitioners in the field of industrial organization from many countries asked why they closed, how they compared with other production concepts, and whether we now see an end of an alternative to Japanese lean production.
