This book covers all aspects of design thinking and its intervention as needed for developing products for the elderly. The book deals with the Universal Principles of Design and how they can be included with Technological Interventions for showcasing the product lifecycle. The main technical features include the Anthropometry calculations, Design Thinking approach on the healthcare products, and selection of target group which is elderly in the presented context. Further, the complete product development cycle, the choice of materials, assessment of the designs, prototyping phases and the final product are all discussed in detail. The various fabrication strategies to reduce the cost of the product, ideation stages and Feedback and Assessment right from design to product development stage are discussed. All the Anthropometry details are included specifically for the target group chosen; its mathematical understanding, error, etc. are all discussed in the book. The ideations, rendering and conceptualization based on Cognitive Ergonomics or Hawthorne and various other effects are also discussed in detail. Adaptive Filtering and Change Detection

Designed for higher level courses in viscous fluid flow, this text presents a comprehensive treatment of the subject. This revision retains the approach and organization for which the first edition has been highly regarded, while bringing the material completely up-to-date.

It contains new information on the latest technological advances and includes many more applications, thoroughly updated problems and exercises.

The GPS Manual Springer Nature Management Information Systems provides comprehensive and integrative coverage of essential new technologies, information system applications, and their impact on business models and managerial decision-making in an exciting and interactive manner. The twelfth edition focuses on the major changes that have been made in information technology over the past two years, and includes new opening, closing, and Interactive Session cases.

The Spycraft Manual Springer Nature Satellite Communications and Navigation Systems publishes the proceedings of the 2006 Tyrrhenian International Workshop on Digital Communications. The book focuses on the integration of communication and navigation systems in satellites.

This manual is a complete user manual for Garmin handheld receivers. It covers theory and practical applications for gps technology and the receivers that use this technology. Representative products for all of the Garmin handheld receivers, past and present, are explained and tips are given on getting the most out of each model. It is designed to augment the user manuals that are supplied with each product but is complete enough to replace them. While this manual is Garmin specific it provides a basic understanding of gps devices that is applicable to any gps receiver. It was written over a period of 4 years and has been reviewed and tested by hundreds of users over that period. It has been used as

the reference for training on gps usage. Because of its unique approach that develops the theory behind operation as well as specific details, it provides a basis that will allow a user to be able to use any gps receiver. Skills in the use of a gps will provide assurance and safety for the user. Topics extend beyond just operating the unit to actually being able to use it for navigation on the land, in the sea, or in the air. Topics are applicable whether you are hiking or driving to your destination. These topics include product operation, waypoints, routes, tracklogs, navigation, maps and databases, product selection, features, theory, accessories, and product unique functions.

This book presents an overview of the latest smart transportation systems, IoV connectivity frameworks, issues of security and safety in VANETs, future developments in the IoV, technical solutions to address key challenges, and other related topics. A connected vehicle is a vehicle equipped with Internet access and wireless LAN, which allows the sharing of data through various devices, inside as well as outside the vehicle. The ad-hoc network of such vehicles, often referred to as VANET or the Internet of vehicles (IoV), is an application of IoT technology, and may be regarded as an integration of three types of networks: inter-vehicle, intra-vehicle, and vehicular mobile networks. VANET involves several varieties of vehicle connectivity mechanisms,

including vehicle-to-infrastructure (V2I), vehicle-to-vehicle (V2V), vehicle-to-cloud (V2C), and vehicle-to-everything (V2X). According to one survey, it is expected that there will be approximately 380 million connected cars on the roads by 2020. IoV is an important aspect of the new vision for smart transportation. The book is divided into three parts: examining the evolution of IoV (basic concepts, principles, technologies, and architectures), connectivity of vehicles in the IoT (protocols, frameworks, and methodologies), connected vehicle environments and advanced topics in VANETs (security and safety issues, autonomous operations, machine learning, sensor technology, and AI). By providing scientific contributions and workable suggestions from researchers and practitioners in the areas of IoT, IoV, and security, this valuable reference aims to extend the body of existing knowledge.

Expert Choice to build Business Intelligence landscapes and dashboards for Enterprises **KEY FEATURES** ? In-depth knowledge of Power BI, demonstrated through step-by-step exercises. ? Covers data modelling, visualization, and implementing security with complete hands-on training. ? Includes a project that simulates a realistic business environment from start to finish. **DESCRIPTION** Mastering Power BI covers the entire Power BI implementation process. The readers will be able to understand all the concepts covered in this book, from data modelling to creating powerful - visualizations. This book begins with the concepts and terminology such as Star-Schema, dimensions and facts. It explains about multi-table dataset and demonstrates how to load these tables into Power BI. It shows how to load stored

data in various formats and create relationships. Readers will also learn more about Data Analysis Expressions (DAX). This book is a must for the developers wherein they learn how to extend the usability of Power BI, to explore meaningful and hidden data insights. Throughout the book, you keep on learning about the concepts, techniques and expert practices on loading and shaping data, visualization design and security implementation. **WHAT YOU WILL LEARN** ? Learn about Business Intelligence (BI) concepts and its contribution in business analytics. ? Learn to connect, load, and transform data from disparate data sources. ? Start creating and executing powerful DAX calculations. ? Design various visualizations to prepare insightful reports and dashboards. **WHO THIS BOOK IS FOR** This book is for anyone interested in learning how to use Power BI desktop or starting a career in Business Intelligence and Analytics. While this covers all the fundamentals, it is recommended that the reader be familiar with MS-Excel and database concepts. **TABLE OF CONTENTS** 1. Understanding the Basics 2. Connect and Shape 3. Optimize your datamodel 4. Data Analysis Expressions (DAX) 5. Visualizations in Power BI 6. Power BI Service 7. Securing your application

How to Live in a Van and Travel Springer Science & Business Media

Today there are over a billion vehicles in the world, and within twenty years, the number will double, largely a consequence of China's and India's explosive growth. Given that greenhouse gases are already creating havoc with our climate and that violent conflict in unstable oil-rich nations is on the rise, will matters only get worse? Or

are there hopeful signs that effective, realistic solutions can be found? Blending a concise history of cars and their impact on the world, leading transportation experts Daniel Sperling and Deborah Gordon explain how we arrived at this state, and what we can do about it. Sperling and Gordon assign blame squarely where it belongs--on the auto-industry, short-sighted government policies, and consumers. They explore such solutions as getting beyond the gas-guzzler monoculture, re-inventing cars, searching for low-carbon fuels, and more. Promising advances in both transportation technology and fuel efficiency together with shifts in traveler behavior, they suggest, offer us a way out of our predicament. The authors conclude that the two places that have the most troublesome emissions problems--California and China--are the most likely to become world leaders on these issues. Arnold Schwarzenegger's enlightened embrace of eco-friendly fuel policies, which he discusses in the foreword, and China's forthright recognition that it needs far-reaching environmental and energy policies, suggest that if they can tackle the issue effectively and honestly, then there really is reason for hope. Updated with a new afterword that sheds light on the profound changes in the global economy in the last year, *Two Billion Cars* makes the case for why and how we need to transform transportation now more than ever. "Authoritatively prescriptive." --Tom Vanderbilt, *Wilson Quarterly* "Provocative and pleasurable, far-seeing and refreshing, fact-based and yet a page-turner, global in scope but rooted in real places. The authors make a convincing case that smart consumers

driving smart electric-drive cars can find the critical path to a safer planet."

--Robert Socolow, Princeton University "In this insightful and persuasive book, Sperling and Gordon highlight one of the biggest environmental challenges of this century: two billion cars. They rightly contend that we cannot avert the worst of global warming without making our cars cleaner and petroleum-free. Luckily the authors also offer a roadmap for navigating this problem that is both visionary and achievable." --Frances

This book presents the principal structure, networks and applications of the Global Aeronautical Distress and Safety System (GADSS) for enhanced airborne Communication, Navigation and Surveillance (CNS). It shows how their implementation works to ensure better security in flight and on the airports surface; improved aircraft tracking and determination in real space and time; and enhanced distress alerting, safety; and Search and Rescue (SAR) system for missing, hijacked and landed aircraft at sea or on the ground. Main topics of this book are as follows: an overview of radio and satellite systems with retrospective to aeronautical safety; security and distress systems; space segment with all aspects regarding satellite orbits and infrastructures; transmission segment of radio and satellite systems; ground segment of radio and earth ground stations; airborne radio and satellite antenna systems and propagation; aeronautical VHF and HF Radio CNS systems and networks; Inmarsat,

Iridium and Cospas-Sasrast aeronautical satellite CNS systems and networks; Aeronautical Global Satellite Augmentation System (GSAS) and networks; Digital Video Broadcasting - Return Channel via Satellite (DVB-RCS) standards and Aeronautical Stratospheric Platform Systems (SPS) and networks.

The Wildlife Techniques Manual

"O'Reilly Media, Inc."

This book offers a comprehensive review of smart technologies and provides perspectives on their applications in urban engineering. It covers a wide range of applications, from manufacturing engineering and transport logistics to information and computation technologies, providing readers with fresh ideas for future research and collaborations. The book showcases selected papers from the International Conference on Smart Technologies in Urban Engineering (STUE-2023), hosted by O.M. Beketov National University of Urban Economy in Kharkiv, Ukraine. The conference, held on June 8-10, 2023, aimed to address the complex rehabilitation of areas damaged by military conflicts and natural disasters. The contributions within this book offer a wealth of valuable information, fostering a meaningful exchange of experiences among scientists in the field of urban engineering. By delving into this book, readers explore innovative approaches to tackle urban challenges, gain insights from experts, and contribute to the advancement of smart technologies for the betterment of cities worldwide.

This book provides the state-of-the-art intelligent methods and techniques for solving real-world problems

along with a vision of the future research. The fifth 2020 Future Technologies Conference was organized virtually and received a total of 590 submissions from academic pioneering researchers, scientists, industrial engineers, and students from all over the world. The submitted papers covered a wide range of important topics including but not limited to computing, electronics, artificial intelligence, robotics, security and communications and their applications to the real world. After a double-blind peer review process, 210 submissions (including 6 poster papers) have been selected to be included in these proceedings. One of the meaningful and valuable dimensions of this conference is the way it brings together a large group of technology geniuses in one venue to not only present breakthrough research in future technologies, but also to promote discussions and debate of relevant issues, challenges, opportunities and research findings. The authors hope that readers find the book interesting, exciting and inspiring.

This book presents trends, developments, and examples of how digital disruption is currently reshaping the logistics industry. Logistics is the invisible force behind the global economy, influencing and providing a lens into all economic activities. Chapters written by respected experts in the field describe how new technologies such as autonomous vehicles, blockchain, Internet of things (IoT), and state-of-the-art freight management solutions are fundamentally changing supply chain solutions. Special emphasis is placed on promising start-

ups and venture capital firms around the world that are now investing in the future of logistics. "Supply chains hold significant room for optimization to the benefit of customers, industry participants, authorities and the environment. This book provides a unique set of perspectives from industry leaders covering a wide range of topics. It is a 'must read' for anyone seeking to understand and contribute to a better tomorrow in supply chains logistics." – Thomas Bagge, Chief Executive Officer and Statutory Director DCSA "The need for standardisation and digitalisation in logistics is no longer an option. This book gives insights from industry experts, shows trends and innovations in platforms, underlines the need for transparency and how big data and analytics can make a world of difference. It's an incredible resource if you wish to better understand the new normal of logistics." – Global Chief Digital & Information Officer, MSC Mediterranean Shipping Company "This book presents readers with a straightforward and comprehensive assessment of supply chain innovation and trends and their impact on the industry. With contributions from several industry leaders, it provides critical knowledge and insight that supply chain and logistics managers need to implement disruptive technologies strategically." – Rene Jacquat, Founder / Advisor, LogiChain Solutions
