Militarybookshop.CompanyUK Erik Petkovic's Lake Erie Technical Wreck Diving Guide is packed with tales of maritime disasters: sailing ships and steamers which foundered, succumbed to storms, collided or were engulfed in flames. There are ships which sank more than once, were involved in wars, slave escapes and catastrophic collisions, plus daring stories of deep salvage, valuable cargoes, submarines, experimental engineering and unidentified wrecks. The guide brings to

life the rediscovered history of the ships, passengers and crews. Then there are the dives themselves. Some of the wrecks are remarkably intact for their age. Amongst the features which can be seen are wooden ships' wheels, standing masts, rudders, propellers, portholes, engines, boilers and steamship hogging arches. Each chapter describes the history, current condition, location, dimensions, hazards and highlights of an individual wreck. The author's original research, contributor photos and

archive materials help bring these 19 enticing, challenging, rarely dived wrecks to life. 'Meticulously researched, nicely composed, beautifully illustrated. I wish I had written this book.' - Gary Gentile 'Any technical diver considering diving on any of these wrecks should first read this one-of-a-kind book!' - Joe Porter, Publisher, Wreck Diving Magazine

Getting Started in Clinical Radiology Springer Science & Business Media

In 2007, one of a team of expert cave divers died in strange circumstances while exploring Bell Island's flooded Iron-ore Mine in Newfoundland, Canada. Joe Steffen's death was a terrible shock for his team-mates and an unexpected and unwelcome tragedy for his friends and family. Although the expedition continued until its scheduled conclusion, and successfully placed two kilometres of permanent guideline in the mine's network of passageways and galleries, Steffen's death closed the mine to further exploration and the possibility of guided dives for almost a decade.

In his new book, best-selling author Steve Lewis tells the story of Steffen's death and its aftermath, from his perspective as expedition leader and Steffen's roommate during their time together in Newfoundland. He writes honestly about the profound effect his friend's death had on him, how it wove itself into his life - both underwater and above - until finally, somewhere on the road to Spain's Santiago de Compostela, how he rid himself of the heartache and guilt associated with it. He says: "I needed to write this book because it turns out the story of Bell Island is more important than four shipwrecks, several square kilometres of flooded mine, and a dead friend. What started out as one local man's quest to put Bell Island on every diver's bucket list, became much more complex than anyone - certainly any of the people involved in that quest - would have guessed."

This book is the first comprehensive monograph dedicated to Chakali, a Southwestern Grusi language spoken by less than 3500 people in northwest Ghana. The dictionary offers a consistent description of word meaning and provides the basis for future research in the linguistic area. It is also designed to provide an inventory of correspondence with English usage in a reversal index. The concepts used in the dictionary are explained in a grammar outline, which is of interest to specialists in Gur and Grusi linguistics, as well as any language researchers working in this part of the world.

"Defense's Nuclear Agency, 1947-1997" traces the development of the Armed Forces Special Weapons Project (AFSWP), and its descendant government organizations, from its original founding in 1947 to 1997. After the disestablishment of the Manhattan

Engineering District (MED) in 1947, AFSWP was formed to provide military training in nuclear weapons' operations. Over the years, its sequential descendant organizations have been the Defense Atomic Support Agency (DASA) from 1959 to 1971, the Defense Nuclear Agency (DNA) from 1971 to 1996, and the Defense Special Weapons Agency (DSWA) from 1996 to 1998. In 1998, DSWA, the On-Site Inspection Agency, the Defense Technology Security Administration, and selected elements of the Office of Secretary of Defense were combined to form the Defense Threat Reduction Agency (DTRA).

The interactive computer-generated world of virtual reality has been successful in treating phobias and other anxiety-related conditions, in part because of its distinct advantages over traditional in vivo exposure. Yet many clinicians still think of VR technology as it was in the 1990s—bulky, costly, technically difficult—with little knowledge

of its evolution toward more modern, evidence-based, practice-friendly treatment. These updates, and their clinical usefulness, are the subject of *Advances in Virtual Reality and Anxiety Disorders*, a timely guidebook geared toward integrating up-to-date VR methods into everyday practice.

Introductory material covers key virtual reality concepts, provides a brief history of VR as used in therapy for anxiety disorders, addresses the concept of presence, and explains the side effects, known as cybersickness, that affect a small percentage of clients. Chapters in the book's main section detail current techniques and review study findings for using VR in the treatment of:

• Claustrophobia. • Panic disorder, agoraphobia, and driving phobia. • Acrophobia and aviophobia. • Arachnophobia. • Social phobia. • Generalized anxiety disorder and OCD. • PTSD. • Plus clinical guidelines for establishing a VR clinic. An in-depth framework for effective (and cost-effective) therapeutic innovations for entrenched problems, *Advances in*

Virtual Reality and Anxiety Disorders will find an engaged audience among psychologists, psychiatrists, social workers, and mental health counselors.

Chris and Chrissy Rouse, an experienced father-and-son scuba diving team, hoped to achieve widespread recognition for their outstanding but controversial diving skills. Obsessed and ambitious, they sought to solve the secrets of a mysterious, undocumented World War II German U-boat that lay under 230 feet of water, only a half-day's mission from New York Harbor. In doing so, they paid the ultimate price in their quest for fame. Bernie Chowdhury, himself an expert diver and a close friend of the Rouses', explores the thrill-seeking world of deep-sea diving, including its legendary figures, most celebrated triumphs, and gruesome tragedies. By examining the diver's psychology through the complex father-and-son dynamic, Chowdhury illuminates the extreme sport diver's

push toward—and sometimes beyond—the limits of human endurance. **Technical Diving** 010 Publishers We organize things. We organize information, information about things, and information about information. Organizing is a fundamental issue in many professional fields, but these fields have only limited agreement in how they approach problems of organizing and in what they seek as their solutions. The Discipline of Organizing synthesizes insights from library science, information science, computer science, cognitive science, systems analysis, business, and other disciplines to create an Organizing System for understanding organizing. This framework is robust and forward-looking, enabling effective sharing of insights and design patterns between disciplines that weren't possible before. The 4th edition of this award-winning and widely adopted text adds content to bridge between the foundations of organizing systems and the new statistical and computational techniques of data science because at

its core, data science is about how resources are described and organized. The 4th edition reframes descriptive statistics as organizing techniques, expands the treatment of classification to include computational methods, and incorporates many new examples of data-driven resource selection, organization, maintenance, and personalization. The Informatics edition contains all the new content related to data science, but omits the discipline-specific content about library science, museums, and document archives. **The Poetry Handbook** Lake Erie Technical Wreck Diving Guide The Poetry Handbook is a lucid and entertaining guide to the poet's craft, and an invaluable introduction to practical criticism for students. Chapters on each element of poetry, from metre to gender, offer a wide-ranging general account, and end by looking at two or three poems from a small group (including works by Donne, Elizabeth Bishop, Geoffrey Hill, and Nobel Laureate Derek Walcott), to build up sustained analytical readings. Thorough and compact, with notes and quotations supplemented by detailed reference to the Norton Anthology of Poetry and a companion website with texts, links,

and further discussion, The Poetry Handbook is indispensable for all school and undergraduate students of English. A final chapter addresses examinations of all kinds, and sample essays by undergraduates are posted on the website. Critical and scholarly terms are italicised and clearly explained, both in the text and in a complete glossary; the volume also includes suggestions for further reading. The first edition, widely praised by teachers and students, showed how the pleasures of poetry are heightened by rigorous understanding and made that understanding readily available. This second edition — revised, expanded, updated, and supported by a new companion website - confirm The Poetry Handbook as the best guide to poetry available in English. *Practical Diving* Taylor & Francis This is the first book to span the depth between traditional sport diving editions and the complex medical/commercial texts. It provides a balanced view of the fascinations and hazards of deep diving through extensive factual development of its technical chapters. Masters Theses in the Pure and Applied Sciences was first conceived, published, and disseminated by the Center for Information and Numerical Data Analysis and Synthesis (CINDAS) * at Purdue University in 1957, starting its coverage of theses with the academic year 1955. Beginning with Volume 13, the printing and dissemination phases of the activity were transferred to University Microfilms/Xerox of Ann Arbor, Michigan, with the thought that such an arrangement would be more beneficial to the academic and general scientific and technical community. After five years of this joint undertaking we had concluded that it was in the interest of all concerned if the printing and

distribution of the volume were handled by an international publishing house to assure improved service and broader dissemination. Hence, starting with Volume 18, Masters Theses in the Pure and Applied Sciences has been disseminated on a worldwide basis by Plenum Publishing Corporation of New York, and in the same year the coverage was broadened to include Canadian universities. All back issues can also be ordered from Plenum. We have reported in Volume 24 (thesis year 1979) a total of 10,033 theses titles from 26 Canadian and 215 United States universities. We are sure that this broader base for theses titles reported will greatly enhance the value of this important annual reference work. While Volume 24 reports these submitted in 1979, on occasion, certain universities do report theses submitted in previous years but not reported at the time.

Hernia repair is one of the commonest

operations in general surgery. Open or laparoscopic repair of a primary inguinal hernia is a relatively straightforward operation, but more complex abdominal wall hernias demand greater surgical skill and knowledge. The editors have assembled the world's top herniologists to describe and illustrate numerous surgical techniques in detail. The field of herniology has developed rapidly over the last few years. Since the previous edition of this book, published in 2003, new surgical techniques have been developed and many new prosthetic and biologic materials have been introduced. Management of Abdominal Hernias 4e presents an authoritative, comprehensive and fully updated account of the surgical techniques and the available prosthetic materials for performing repair of abdominal wall hernias. Both open and laparoscopic methods are included. It is aimed at general and specialist surgeons in the practice of clinical surgery, as well as trainee surgeons.

Oxygen poisoning is, after decompression sickness, the second most important threat to the diver. This book is the first to be entirely devoted to the subject. The author, an acknowledged authority in the field, covers all situations where oxygen or hypertoxic gas mixtures are employed at increased pressures, and reviews many of the factors which may affect the incidence of poisoning.

I read the book for enjoyment and pleasure, as well as enlightenment. It was a delightful learning experience.--Thomas Lee Bucky, MD
This book teaches radiology in a way that mimics a lively setting on the wards. To have fun in learning the theoretical basis of imaging and the interpretation of radiographs and other modalities, in the context of clinical

examination and findings, this is the book for you. The basics of imaging are described using analogies from daily life to make them as understandable and memorable as possible. The material of radiology is described using actual cases; the most common differential diagnoses are presented. A great amount of image material supports the learning process. A storyline runs through the book: four students in their final year of medical school are involved in active discussion of the cases, so that the reader also feels a part of the diagnostic process.
