From a technological

standpoint, geography is largely irrelevant. Data flows through the internet without regard for political borders or territories. Services, communication, and interaction can occur online between persons who may be in different countries. Illegal activities, like hacking, cyberespionage, propagating terrorist

---

propaganda, defamation, revenge porn, and illegal marketplaces may all be remotely targeted and accessed from various countries. As such, the internet has created an interesting and complex set of challenges for the concept of jurisdiction and conflicts of law. This title takes a comparative approach covering the EU, UK, US, Germany, and China. Broken into four parts, this book delves into the notion of jurisdiction as it relates to the internet. Part I focuses on the different meanings of the concept of jurisdiction, from a legal and historical perspective, and distinguishing between the different branches of government. It will highlight the challenges created by the internet, including social media

and cloud computing. Part II analyses criminal jurisdiction, in regards to both jurisdictions in cybercrime cases and jurisdictional issues relating to criminal investigations (access to the cloud) and enforcement. Part III examines jurisdiction and applicable law in civil and commercial matters, such as e-commerce B2B and B2C contracts, torts typically occurring online, and online defamation and privacy infringement. Finally, Part IV looks at regulatory jurisdiction, examining the power of the executive (whether an arm of government or independent regulator) to apply and enforce national law. It will look at aspects like the provision of online audio-visual media services and

---

online gambling services, both of which are heavily regulated, but which can be easily provided remotely from different jurisdictions. The book concludes by analysing how the concept of jurisdiction should be adapted to ensure the rule of law by nation states and prevent international conflicts between states. This title gives a comprehensive look at the complicated subject of internet jurisdiction, essential for all dealing with jurisdictions in the modern age.

Forecasting is required in many situations.

Stocking an inventory may require forecasts of demand months in advance.

Telecommunication routing requires traffic forecasts a few minutes ahead.

Whatever the circumstances or time horizons involved, forecasting is an important aid in effective and efficient planning.

This textbook provides a comprehensive introduction to forecasting methods and presents enough information about each method for readers to use them sensibly.

This book is about making machine learning models and their decisions interpretable. After exploring the concepts of interpretability, you will learn about simple, interpretable models such as decision trees, decision rules and linear regression. Later chapters focus on general model-agnostic methods for interpreting black box models like feature importance and accumulated local effects and explaining individual predictions with Shapley values and LIME. All interpretation methods are explained in depth and discussed critically. How do they work under the hood? What are their strengths and weaknesses? How can their outputs be interpreted? This book will enable you to select and correctly apply

the interpretation method that is most suitable for your machine learning project.

In 1949, United Nations Constitutional Assistance (UNCA) was conceived to promote the Western liberal constitution. This was colonial trusteeship. However, in 1960, as a step towards decolonization, the United Nations General Assembly rejected internationalized constitution-making, and, by extension, UNCA. All colonies acquired the right to draft their own constitutions without any international assistance. Nonetheless, in the same year, UNCA was revived and since then it has helped over 40 developing sovereign states to adopt the Western liberal constitution, for the aims of building peace, preventing conflict, and promoting good governance in these

independent states. This book scrutinizes UNCA and its offshoot, UN/International Territorial Administration (ITA), including their historical origins and revival from 1960 to 2019. Sripati argues that although the United Nations (UN) uses UNCA to help developing sovereign states secure debt relief, it undertakes UNCA to 'modernize' them with a view to 'strengthen' their supposedly weakened sovereignty. By doing so, the UN is seeking these states' adoption of a Western liberal-style constitution, thus violating their right to self-determination. The book shows how UNCA sires and guides UN (legislative) assistance in all state-sectors: security, judicial, electoral, commercial, parliamentary, public administration, and criminal.

---

Irrespective of UNCA's benevolent motivations, such intrusive interventions impose the old forms of domination and perpetuate global inequality.

This book investigates the substance and presentation of major metaphysical themes in Maimonides' Guide for the Perplexed. Using rigorous philosophy it seeks to refute the view that the Guide hides an "esoteric" philosophical meaning beneath a traditional veneer, and offers a new explanation of his esotericism.
