Pressure ulcers are now a universally recognized quality indicator and demand renewed attention by all clinicians. Initiatives by the Centers for Medicare and Medicaid Services (CMS) place emphasis on timely and accurate wound documentation. These policies include reimbursement guidelines for hospitals and revised surveyor guidelines for nursing homes, as well as other care settings. The interdisciplinary nature of wound care requires all levels of staff to be aware of pressure ulcer assessment across the health care continuum.& ;This guide was developed as a basic reference tool for clinicians caring for patients who are at risk for or who have pressure ulcers. Illustrations depict typical examples encountered in clinical practice. Although the 2009 National Pressure Ulcer Advisory Panel (NPUAP), European Pressure Ulcer Advisory Panel (EPUAP) system now uses the term "category" rather than "stage," we have chosen to use "stage" for compliance with CMS terminology. This resource is designed to assist in wound identification and documentation and is not intended as a treatment guide.

This open access book aims to provide a comprehensive but practical overview of the knowledge required for the assessment and management of the older adult with or at risk of fragility fracture. It considers this from the perspectives of all of the settings in which this group of patients receive nursing care. Globally, a fragility fracture is estimated to occur every 3 seconds. This amounts to 25 000 fractures per day or 9 million per year. The financial costs are reported to be: 32 billion EUR per year in Europe and 20 billion USD in the United States. As the population of China ages, the cost of hip fracture care there is likely to reach 1.25 billion USD by 2020 and 265 billion by 2050 (International Osteoporosis Foundation 2016). Consequently, the need for nursing for patients with fragility fracture across the world is immense. Fragility fracture is one of the foremost challenges for health care providers, and the impact of each one of those expected 9 million hip fractures is significant pain, disability, reduced quality of life, loss of independence and decreased life expectancy. There is a need for coordinated, multi-disciplinary models of care for secondary fracture prevention based on the increasing evidence that such models make a difference. There is also a need to promote and facilitate high quality, evidence-based effective care to those who suffer a fragility fracture with a focus on the best outcomes for recovery, rehabilitation and secondary prevention of further fracture. The care community has to understand better the experience of fragility fracture from the perspective of the patient so that direct improvements in care can be based on the perspectives of the users. This book supports these needs by providing a comprehensive approach to

nursing practice in fragility fracture care.
Pressure Ulcers in the Aging Population John Wiley & Sons
The day-to-day responsibility for wound management is a role usually undertaken by nurses. It includes assessing the wound, selecting an appropriate treatment, and evaluating the patients' progress. In order to do this effectively the nurse needs to understand the healing process, recognize the factors which may delay wound healing, understand how wound healing can be optimized, know how to recognize complications if they arise and know how to treat them. This text, specifically written for community nurses, including practice nurses, provides a picture of wound healing for both acute and chronic wounds that may be encountered in a community setting. An overview of the function of the skin and phases of wound healing are examined prior to looking at the relationship between wound healing and the patients' health and lifestyle. The reference is written in a question-and-answer format, and includes relevant case studies.
