This book shows the capabilities of Microsoft Excel in teaching health services management statistics effectively. Similar to the previously published Excel 2016 for Health Services

Management Statistics, this book is a step-by-step, exercise-driven guide for students and practitioners who need to master Excel to solve practical health services management problems. If understanding statistics isn't your strongest suit, you are not especially mathematically inclined, or if you are wary of computers, this is the right book for you. Excel, a widely available computer program for students and managers, is also

an effective teaching and learning tool for quantitative analyses in health services courses. Its powerful computational ability and graphical functions make learning statistics much easier than in years past. However, Excel 2019 for Health Services Management Statistics: A Guide to Solving Practical Problems, 2nd Edition capitalizes on these improvements by teaching students and managers how to apply Excel to statistical techniques necessary in

their courses and work. Each chapter explains statistical formulas and directs the reader to use Excel commands to solve specific, easy-to-understand health services management problems. Practice problems are provided at the end of each chapter with their solutions in an appendix. Separately, there is a full practice test (with answers in an appendix) that allows readers to test what they have learned.

Written by the developers of the popular Problem-Solving Approach (PST), this evidence-based manual reflects important advances in neuroscience that underscore the important role of emotion as a crucial aspect of behavioral health treatment. This updated treatment model,

Emotion-Centered Problem-Solving Therapy (EC-PST) moves emotion to a critical position that is integrated throughout its therapeutic strategies. This is a significant shift in interventions that had previously focused on cognitive approaches.

It describes approaches that can be used for a wide variety of populations (including such targeted groups as U.S. Veterans and active military personnel), settings, and client issues. It

addresses such new implementation systems as telehealth, and community collaborative care models. In addition, the authors provide empirically-based evidence of the treatment’s efficacy underlying positive functioning factors such as hope, well-being, enhanced leadership, and more.
