Why are so many American children learning so much misinformation about

climate change? Investigative reporter Katie Worth reviewed scores of textbooks, built a 50-state database, and traveled to a dozen communities to talk to children and teachers about what is being taught, and found a red-blue divide in climate education. More than one-third of young adults believe that climate change is not man-made, and science teachers who teach

global warming are being contradicted by history teachers who tell children not to worry about it. Who has tried to influence what children learn, and how successful have they been? Worth connects the dots to find out how oil corporations, state legislatures, school boards, and textbook publishers sow uncertainty, confusion, and distrust about

---

climate science. A thoroughly researched, eye-opening look at how some states do not want children to learn the facts about climate change.

God and His Word are true. Not because of anything we do, but because of who He is. Not once, not occasionally, but right now and all the time. Sometimes it takes everything moving to notice the thing that doesn't move. Sometimes it takes telling two very different stories to notice how the Truth was exactly the same in both of them. For anyone searching for a solid foundation to cling to, She Reads Truth is a rich and honest Bible-filled journey to finally find permanent in a world that's passing away. Fountas and Pinnell

In today's classrooms, the instructional needs and developmental levels of our students are highly varied, and the conventional math whole-group model has its downsides. In contrast to the rigid, one-size-fits-all approach of conventional whole-group instruction, guided math allows us to structure our math block to support student learning in risk-free, small-group instruction. Guided

math goes beyond just reorganizing your math block; it also gives you an opportunity to approach math instruction with a renewed sense of perspective and purpose. Drawing on two decades of experience, Reagan Tunstall offers step-by-step best practices to help educators revolutionize their math blocks with a student-centered approach. Whether you're a new teacher who's curious about guided math or a veteran educator
