In this "meticulously researched" account (New York Times Book Review), a Pulitzer Prize-winning author examines the dangers of a failing public health system unequipped to handle large-scale global risks like a

coronavirus pandemic. The New York Times bestselling author of *The Coming Plague*, Laurie Garrett takes on perhaps the most crucial global issue of our time in this eye-opening book. She asks: is our collective health in a state of decline? If so, how dire is this crisis and has the public health system itself contributed to it? Using riveting detail and finely-honed storytelling, exploring outbreaks around the world, Garrett exposes the underbelly of the world's globalization to find out if it can still be assumed that government can and will protect the people's health, or if that trust has been irrevocably broken. "A frightening vision of the future and a deeply unsettling one . . . a sober, scary book that not only limns the dangers posed by emerging diseases but also raises serious questions about two centuries' worth of Enlightenment beliefs in science and technology and progress." -- Michiko Kakutani, *The New York Times*

A "riveting and illuminating" Bill Gates Summer Reading pick about how and why some nations recover from trauma and others don't (Yuval Noah Harari), by the Pulitzer Prize-winning author of the landmark bestseller *Guns, Germs, and Steel*. In his international bestsellers *Guns, Germs and Steel* and *Collapse*, Jared Diamond transformed our understanding of what makes civilizations rise and fall. Now, in his third book in this monumental trilogy, he reveals how successful nations recover from crises while adopting selective changes -- a coping mechanism more commonly associated with individuals recovering from personal crises. Diamond compares how six countries have survived recent upheavals -- ranging from the forced opening of Japan by U.S. Commodore Perry's fleet, to the Soviet Union's attack on Finland, to a murderous coup or countercoup in Chile and Indonesia, to the transformations of Germany and Austria after World War Two. Because Diamond has lived and spoken the language in five of these six countries, he can present gut-wrenching histories experienced firsthand. These nations coped, to varying degrees, through

mechanisms such as acknowledgment of responsibility, painfully honest self-appraisal, and learning from models of other nations. Looking to the future, Diamond examines whether the United States, Japan, and the whole world are successfully coping with the grave crises they currently face. Can we learn from lessons of the past? Adding a psychological dimension to the in-depth history, geography, biology, and anthropology that mark all of Diamond's books, *Upheaval* reveals factors influencing how both whole nations and individual people can respond to big challenges. The result is a book epic in scope, but also his most personal yet.

In Jared Diamond's follow-up to the Pulitzer-Prize winning *Guns, Germs and Steel*, the author explores how climate change, the population explosion and political discord create the conditions for the collapse of civilization. Diamond is also the author of *Upheaval: Turning Points for Nations in Crisis*. Environmental damage, climate change, globalization, rapid population growth, and unwise political choices were all factors in the demise of societies around the world, but some found solutions and persisted. As in *Guns, Germs, and Steel*,

Diamond traces the fundamental pattern of catastrophe, and weaves an all-encompassing global thesis through a series of fascinating historical-cultural narratives. Collapse moves from the Polynesian cultures on Easter Island to the flourishing American civilizations of the Anasazi and the Maya and finally to the doomed Viking colony on Greenland. Similar problems face us today and have already brought disaster to Rwanda and Haiti, even as China and Australia are trying to cope in innovative ways. Despite our own society's apparently inexhaustible wealth and unrivaled political power, ominous warning signs have begun to emerge even in ecologically robust areas like Montana. Brilliant, illuminating, and immensely absorbing, Collapse is destined to take its place as one of the essential books of our time, raising the urgent question: How can our world best avoid committing ecological suicide?

The economic tipping point for the United States is no longer theoretical. It is a reality today. The country has gone from the world's largest creditor to its greatest debtor; the value of the dollar is sinking; domestic manufacturing is winding down - and these trends don't seem to be slowing. Peter Schiff casts a sharp, clear-sighted eye on these factors and explains what the possible effects may be and how investors can protect themselves. For more than a decade, Schiff has not only observed the U.S. economy, but also helped his clients reposition their portfolios to reflect his outlook. What he sees is a nation facing an economic storm brought

on by growing federal, personal, and corporate debt, too-little savings, a declining dollar, and lack of domestic manufacturing. Crash-Proof is an informed and informative warning of a looming period marked by sizeable tax hikes, loss of retirement benefits, double digit inflation, even - as happened recently in Argentina - the possible collapse of the middle class. However, Schiff does have a survival plan that can provide the protection that readers will need in the coming years. Make a Fortune by Investing in Gold and Other Hard Assets Basic Books

iOpener: Our Mysterious Universe Penguin The year is 2393, and a senior scholar of the Second People's Republic of China presents a gripping and deeply disturbing account of how the children of the Enlightenment, the political and economic elites of the so-called advanced industrial societies, entered into a Penumbral period in the early decades of the twenty-first century, a time when sound science and rational discourse about global change were prohibited and clear warnings of climate catastrophe were ignored. What ensues when soaring temperatures, rising sea levels, drought, and mass migrations disrupt the global governmental and economic regimes? The Great Collapse of 2093. This work is an important title that will change how readers look at the world. Dramatizing climate change in ways traditional nonfiction

cannot, this inventive, at times humorous work reasserts the importance of scientists and the work they do and reveals the self-serving interests of the so called 'carbon industrial complex' that have turned the practice of sound science into political fodder. The authors conclude with a critique of the philosophical frameworks, most notably neo-liberalism, that do their part to hasten civilization 's demise. Based on sound scholarship yet unafraid to tilt at sacred cows in both science and policy, this book provides a welcome moment of clarity amid the cacophony of climate change literature. It includes a lexicon of historical and scientific terms that enriches the narrative and an interview with the authors.

China is hot. The world sees a glorious future for this sleeping giant, three times larger than the United States, predicting it will blossom into the world's biggest economy by 2010. According to Chang, however, a Chinese-American lawyer and China specialist, the People's Republic is a paper dragon. Peer beneath the veneer of modernization since Mao's death, and the symptoms of decay are everywhere: Deflation grips the economy, state-owned enterprises are failing, banks are

hopelessly insolvent, foreign investment continues to decline, and Communist party corruption eats away at the fabric of society. Beijing's cautious reforms have left the country stuck midway between communism and capitalism, Chang writes. With its impending World Trade Organization membership, for the first time China will be forced to open itself to foreign competition, which will shake the country to its foundations. Economic failure will be followed by government collapse. Covering subjects from party politics to the Falun Gong to the government's insupportable position on Taiwan, Chang presents a thorough and very chilling overview of China's present and not-so-distant future.

Betrayal of Trust John Wiley & Sons

In this New York Times bestseller, one of America's premier child psychologists offers a must-read account of the dismal state of parenting today, and a vision for how we can better prepare our children for the challenges of the adult world In The Collapse of Parenting, internationally acclaimed author Leonard Sax argues that rising levels of obesity, depression, and anxiety among young people can be traced to parents abdicating their authority. The result is children who have no standard of right and wrong, who lack discipline, and who look to their peers and the Internet for direction. Sax shows how parents

must reassert their authority - by limiting time with screens, by encouraging better habits at the dinner table, and by teaching humility and perspective - to renew their relationships with their children. Drawing on nearly thirty years of experience as a family physician and psychologist, along with hundreds of interviews with children, parents, and teachers, Sax offers a blueprint parents can use to help their children thrive in an increasingly complicated world.

The Collapse Heinemann Educational Books
What if our civilization were to collapse? Not many centuries into the future, but in our own lifetimes? Most people recognize that we face huge challenges today, from climate change and its potentially catastrophic consequences to a plethora of socio-political problems, but we find it hard to face up to the very real possibility that these crises could produce a collapse of our entire civilization. Yet we now have a great deal of evidence to suggest that we are up against growing systemic instabilities that pose a serious threat to the capacity of human populations to maintain themselves in a sustainable environment. In this important book, Pablo Servigne and Raphaël Stevens confront these issues head-on. They examine the scientific

evidence and show how its findings, often presented in a detached and abstract way, are connected to people's ordinary experiences – joining the dots, as it were, between the Anthropocene and our everyday lives. In so doing they provide a valuable guide that will help everyone make sense of the new and potentially catastrophic situation in which we now find ourselves. Today, utopia has changed sides: it is the utopians who believe that everything can continue as before, while realists put their energy into making a transition and building local resilience. Collapse is the horizon of our generation. But collapse is not the end – it's the beginning of our future. We will reinvent new ways of living in the world and being attentive to ourselves, to other human beings and to all our fellow creatures.

As press secretary to Mikhail Gorbachev, Andrei Grachev witnessed and recorded many events unobserved by the general public. In this engaging and compelling book, he recounts these episodes in vivid detail, interpreting them in the context of the time. Highlighted are top-level meetings with Western leaders; State Council debates on a new treaty of union (promising, until Gorbachev and Yeltsin sparred over Russia's policy toward the Chechen

republic); and Gorbachev's private talks with leading members of government, business, and religious and cultural circles from around the world.
