Use the methodology in this

study guide to design, manage, and operate a balanced enterprise cybersecurity program that is pragmatic and realistic in the face of resource constraints and other real-world limitations. This guide is an instructional companion to the book Enterprise Cybersecurity: How to Build a Successful Cyberdefense Program Against Advanced Threats. The study guide will help you understand the book's ideas and put them to work. The guide can be used for self-study or in the classroom. Enterprise cybersecurity is about implementing a cyberdefense program that will succeed in	defending against real-world attacks. While we often know what should be done, the resources to do it often are not sufficient. The reality is that the Cybersecurity Conundrum—what the defenders request, what the frameworks specify, and what the budget allows versus what the attackers exploit—gets in the way of what needs to be done. Cyberattacks in the headlines affecting millions of people show that this conundrum fails more often than we would prefer. Cybersecurity professionals want to implement more than what control frameworks specify, and more than what	the budget allows. Ironically, another challenge is that even when defenders get everything that they want, clever attackers are extremely effective at finding and exploiting the gaps in those defenses, regardless of their comprehensiveness. Therefore, the cybersecurity challenge is to spend the available budget on the right protections, so that real-world attacks can be thwarted without breaking the bank. People involved in or interested in successful enterprise cybersecurity can use this study guide to gain insight into a comprehensive framework for coordinating an entire enterprise cyberdefense

Prentice Hall Conceptual Physics Academic Press Participatory Case Study Work shows academic co-researchers how to adapt and implement their methods so that data collection and analysis is authentically participatory. At the heart of this text is advocating a participatory approach to case study work, with co-construction as a catalyst for shared understanding and action in advancing ageing studies. Whilst case study research has a relatively long tradition in the canon of research methodologies, little attention has so far been paid to the importance and value of participatory case study work. This is surprising as its egalitarian and</p>

democratic value-base naturally lends itself to the co-production and co-creation of personal and collective theory drawn directly from lived experience. The book brings together over 15 years' worth of participatory case study work in ageing studies in which the editors have been actively involved as either front-line researchers or as supervisors to PhD and MPhil studies adopting the methodology, and from where each of the contributors is selected. Real-life case examples are shared in the main chapters of the book and they provide direction as to how learning can be applied to other settings. The chapters also contain key references and recommended reading. This volume will appeal to

undergraduate and postgraduate students as well as postdoctoral researchers interested in fields such as research methods, qualitative methods, ageing studies and mental health studies.

Time: A Bibliographic Guide
Oxford University Press
This is the first textbook that illustrates, step by step, how to practice evidence-based group work. As group workers are increasingly being held accountable to evaluate, monitor, and improve their practice, there are scant resources available that apply specifically to their practice. General books on evidence-based practice lack the rich material on group work organized for the first time in this one volume. Designed specifically as a supplement for undergraduate and

graduate group work courses, the text is organized around the process and philosophy of evidence-based practice: formulating appropriate practice questions; searching for evidence; critically reviewing available evidence; applying the evidence with judgment, skill, and concern for the group members; and evaluating the outcomes achieved. The evidence-based group work framework teaches students how to skillfully apply best practices through practical learning activities, case examples, research designs,

step-by-step guidelines and checklists, assessment tips, and detailed instructions for formulating questions and evaluating answers. It will be equally valuable as a handy reference for professionals eager to hone their practice skills.

School social workers engage in different

forms of consultation on a daily basis, yet they rarely think about or describe this work as 'consultation.'	specific terms and proposes that there are six models of consultation. These models are organizational consultation, program consultation, education and training consultation, mental health consultation, behavioral consultation, and clinical case consultation. The models are differentiated according to their problem focus, outcome goal, intervention methods, change	processes, power base, and value system. School social work consultation services are an important pathway to help school systems fulfill their educational mission and to help school personnel become more effective in their professional work.
